1.4 Baying system TS 8

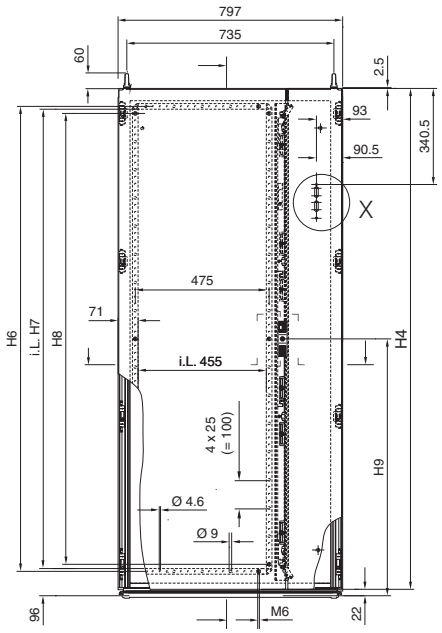
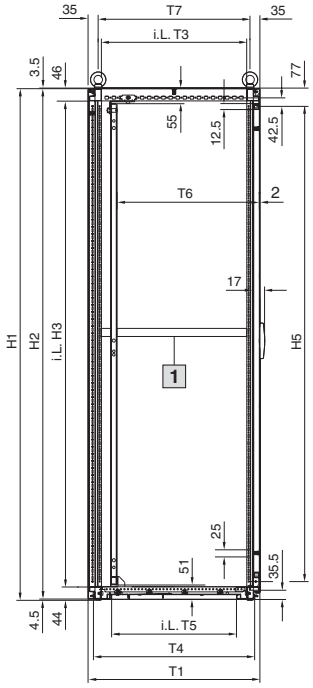
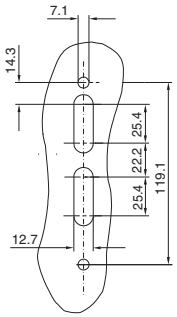
For isolator door locking Page 150



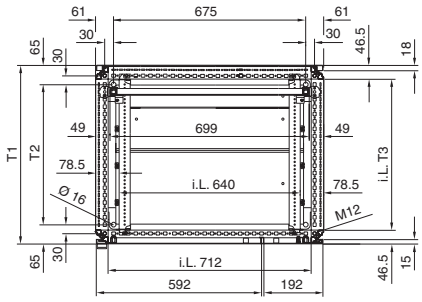


Detail X



1 Only for TS 8906.500

i.L. = Clearance width



Enclosure

H1 = Overall height
H2 = Height of rear panel
H3 = Clearance between enclosure frame sections
H4 = Height of door and trim panel
H5 = Section length of system punchings
H6 = Distance between the rows of tubular door frame holes
H7 = Clearance between the tubular door frame sections
H8 = Spacing of tubular door frame fastening bolts
H9 = Distance from base to centre of lock

T1 = Overall depth
T2 = Section length of system punchings/ hole distance of base and plinth attachment
T3 = Clearance between enclosure frame sections
T4 = Depth of base frame
T5 = Clearance in base aperture
T6 = Possible mounting depth (mounting plate assembly)
T7 = Centre-to-centre distance between eyebolts

Note:
The cutouts in the right trim piece are suitable for the following isolator actuators: Allen Bradley 1494 V-H11, Square D9422A1, ITE Siemens[1)] Max-Flex Serie/F HOH, General Electric TDA Type 1 and 2.

[1)] Available in USA only.

1.5 Command Panel VIP 6000/Optipanel

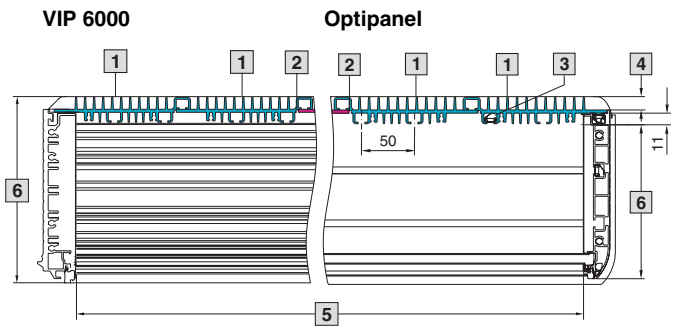
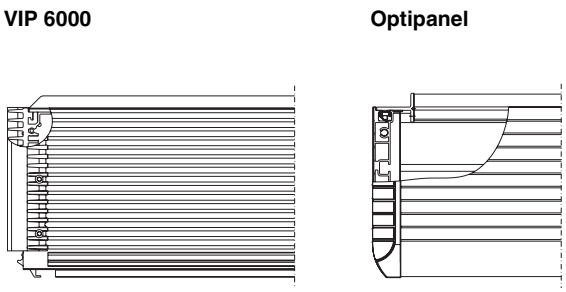
Rear cooling panel Page 165/176





1 Rear cooling panel section, unless otherwise specified the cooling fins are arranged vertically.

2 Width compensating panel, mounted in the centre with an even number of heat sinks, or on the right with an uneven number. By rotating the entire rear panel through 180°, this position may be modified individually.

3 Spring nut M5, CP 6108.000 for interior installation on screw channels.

4 The total depth of the enclosure is increased by 13 mm.

5 Front panel width for determining the cooling modules and compensating panel.

6 Installation depth is reduced by 11 mm.

Recommendation:
The minimum front panel width for the installation of at least 2 heat sink sections is 240 mm and should not be undercut, if possible.

1.5 Optipanel

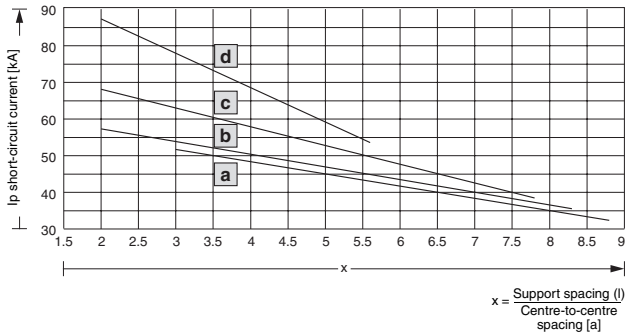
5 x 50.0 x 1.0	900 A	700 A	400 A	b	2/3	3577.000
10 x 50.0 x 1.0	1400 A	1000 A	600 A	c	2/3	3578.000
10 x 63.0 x 1.0	1600 A	1240 A	715 A	d	2/3	3579.000

[1] Number of lamina x lamina width x lamina thickness
[2] The conductor temperature of the laminated copper bar is derived from the sum total of the ambient temperature and the temperature increase.
Example:
SV 3565.000 loaded with 220 A, i.e. the temperature increases by 30 K. At an ambient temperature of 35°C, this produces a resultant conductor temperature of 35°C + 30 K = 65°C.

Short-circuit resistance diagrams

Basis of test:
VDE 0660, part 500/IEC 60 439-1.
Test implemented:
Dynamic short-circuit resistance to IEC 60 439-1.

The dimensions for the support spacing (l) and for the centre-to-centre spacing (a) must be within the specified min./max. limits. The quotients of l/a can be used to determine the permissible short-circuit current I_p by using curves a to d. The prescribed installation type must be taken into account.



Curve	Support spacing (l) mm		Centre-to-centre spacing (a) mm	
	min.	max.	min.	max.
a	150	300	34	60
b	150	350	42	85
c	200	400	51	85
d	200	450	81	100

Type of assembly with universal support SV 3079.000

NH isolators, size 000

Page 307, 311, 337, 358

- Thanks to a specially developed locking mechanism, the fuse inserts are easily and quickly installed.
- A special switching aid pre-stresses the lyre contact when the isolator lid is closed. This means that the fuse insert slides reliably into its final position without damaging the contact.
- Microswitches for monitoring the lid position are readily integrated on the right and left.
- The unit can be protected from unauthorised switching via the readily accessible sealing device on the front of the unit.
- The spaciously designed viewing window of the isolator lid allows easy monitoring of the fuse insert indicators.
- Test holes drilled in the viewing window allow direct measurement access to the contact parts of the fuse inserts.

NH isolator, sizes 00 to 3

Page 338 – 341, 345 – 348, 358 and 359

- Easy assembly with removable push-in isolator lid and top mounted contact hazard protection cover.
- Two-part contact hazard protection cover plate with service-friendly central unlocking facility allows connection in accordance with BGV-A2 (VBG 4), even whilst the supply end is live.
- Apart from its protective function, the design of the NH on-load isolator facilitates the activation and deactivation of electrical equipment and system components.
- The units may be actuated whilst live (see table below).
- Microswitches to indicate the switching position of the isolator lid are easily installed via snap-mounting on the left and right.
- The viewing window integrated into the lid unit has test holes which can be opened by sliding the viewing window, for direct measurement access to the contact parts of the fuse inserts (see photograph).

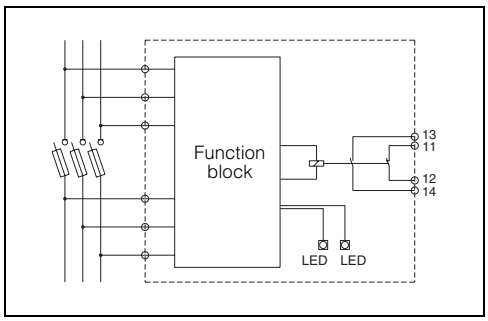
Electronic fuse monitoring

- No separate auxiliary voltage required.
- Automatic activation following fault rectification.
- Reliable functioning, thanks to surge-proof microelectronics.
- Readily accessible connector facilitates service-friendly connection of the signal tracks.
- Rapid response behaviour in the event of a fault.

Electronic fuse monitoring may be used in 50/60 Hz three-phase circuits ranging from 400 V AC to 690 V AC (max. +5 %). The auxiliary voltage required for operation is obtained from the mains voltage (supply end) via live puller lugs.

Consequently, this function is only available with the mains voltage connected and the isolator lid closed. If one or more of the NH fuse inserts is switched due to a malfunction, an error signal is generated. Evaluation is achieved by comparing the voltage on the puller lugs with the NH fuse inserts used (differential voltage ≥ 75 V). In the event of a fault, a corresponding signal message for further processing is provided via the separate relay contacts. Additionally, malfunctions are visually indicated by a red LED display, whilst a green LED indicates that the sytem is operational.

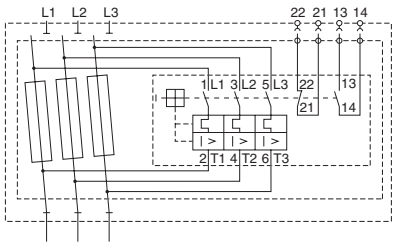


Electromechanical fuse monitoring

The connection clamps of the floating switch contacts which serve as indicators are arranged on the top of the isolator base. This arrangement guarantees extremely simple installation.

The isolator lids can be removed without disconnecting any pilot wires, in the same way as NH isolators without fuse monitoring. Unlike an electronic monitor, this system operates without auxiliary power, yet still performs the same functions.

Wiring diagram



Technical specifications	Electromechanical fuse monitoring	Electronic fuse monitoring
Rated operating voltage U_e	AC 24 V to AC 690 V (50/60 Hz) DC 24 V to DC 250 V	AC 400 V to AC 690 V (50/60 Hz)

Technical information

NH fused isolators, sizes 00 to 3

Page 336, 349, 353

- The cable outlet – top or bottom – is selected directly during assembly on the same device. The switch cover unit is simply rotated through 180° (sizes 1 to 3).
- Reliable isolated or off-load position of the switch cover unit, thanks to the integral multi-function key.
- Switch locking can be achieved via the installation of padlocks in the closed and isolated position.
- For inspection purposes, there are viewing windows with integral holes in the switch cover unit or sliding viewing windows.
- Simple external/internal mounting of microswitches to indicate the switch position of the NH unit (lid unit).

Use of semi-conductor fuses in Rittal NH switchgear

The overload and short-circuit protection of semi-conductor components places very high demands on the fuse inserts, due to the time pattern for effective protection of the defective or damaged sub-circuit. Because semi-conductor components have a low thermal capacity, the integral disconnect value (I^2t-value) of the semi-conductor fuse inserts type aR, gR or gRL must match the integral limit value of the semi-conductor cell being protected. Consequently, the tripping characteristic of the fuse inserts must be very fast, and overvoltage during the disconnection process (switching or arc voltage) must be as minimal as possible. Compared with fuse inserts for cable and line protection and transformer protection, the particular features of semi-conductor fuse inserts produce a comparatively high heat loss. The high heat loss is dissipated to the environment in the form of thermal energy. Because NH switchgear only has a limited capacity to dissipate thermal energy to the environment, the maximum heat loss ($P_{v\ max.}$/fuse insert) is listed in the technical specifications of the NH switchgear. If the values exceed the heat loss specified by the manufacturer, the rated current should be reduced in accordance with the table opposite, or the minimum connection cross-section increased accordingly to encourage heat dissipation.

Semi-conductor fuses type aR/gR/gRL				Minimum cross-section (Cu) [mm²]	Reduction factor for rated current
Size	I_N [A]	Operating category	Heat loss [W]

Rated currents of busbars E-Cu (DIN 43 671)

DIN 43 671 specifies the continuous currents of busbars at an ambient temperature of 35°C and an average busbar temperature of 65°C. The continuous currents specified in the following table may be adjusted to alternative operating temperatures using a correction factor (k_2).

For safe operation with thermal reserve, it is desirable to limit the busbar temperature to a maximum of 85°C. However, the decisive factor is the lowest permissible continuous temperature of the components which directly contact the busbar system (fuse bases, outgoing cables etc.). The ambient air temperature of the busbars or the busbar system should not be more than 40°C; an average of 35°C maximum is recommended.

For the continuous temperatures specified in the table, an emission level of 0.4 applies, equivalent to an oxidating copper bar. In modern busbar systems – built into enclosures with a protection category of IP 54 and above – a more favourable emission level can be assumed. The lower emission level facilitates an additional increase in continuous currents compared with the figures in DIN 43 671, irrespective of the specified air and busbar temperature. Experience has shown an increase in the continuous current of 6 – 10 % compared with the table figures for bare copper bars, and 60 % for surface-oxidised copper bars.

Example:
For a Cu bar 30 x 10 mm (E-Cu F30), DIN 43 671 specifies a continuous current of I_{N65} = 573 A.
The correction factor diagram for square cross-sections indicates a correction factor k_2 = 1.29 at an air temperature of 35°C and a busbar temperature of 85°C. Thanks to the favourable emission level, the continuous current is increased by a further 6 – 10 %. In this example, a mean value of 8 % is used. Compared with the table figure from DIN 43 671, the Rittal rated current specification for a Cu bar 30 x 10 mm is:

$$I_{N85} = I_{N65} \cdot k_2 + 8\ \%$$
$$= 573\ A \cdot 1.29 \cdot 1.08$$
$$I_{N85} = 800\ A$$

Continuous currents for busbars
Made from E-Cu with square cross-section in indoor locations at 35°C air temperature and 65°C bar temperature, vertical position or horizontal position of the bar width.

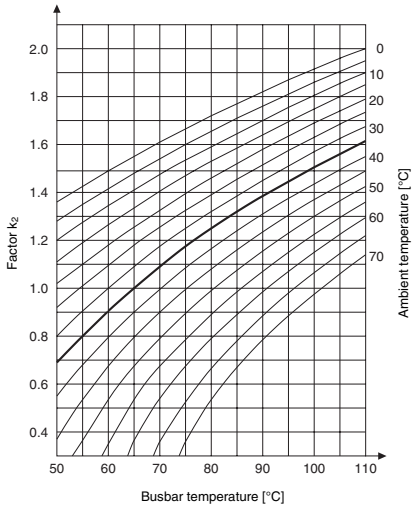
Correction factor diagram for PLS



Rittal PLS current load
According to DIN 43 671, the correction factor k_2 (correction factor diagram) is used to correct the basic rated current with reference to the existing temperatures of the ambient air and the busbar.
In accordance with DIN 43 671, the load figures of the Rittal PLS special bars have been determined on the basis of measurement trials, as follows:

PLS special busbars	Basic rated current WS 50/60 Hz	
	for 35/75°C	for 35/65°C

Rittal Maxi-PLS – Technical information

Planning and project management in line with regulations

As a general principle, low-voltage switchgear and distributors should be planned to meet the operating conditions of their final installation site. To this end, the operator of the plant, in collaboration with the manufacturer, should stipulate the operating and ambient conditions. Moreover, as a general rule, the operator or planning office should also supply the manufacturer with full electrical specifications of both the mains supply end and the distributor outlet end. This makes it possible to plan and manufacture a cost-effective system with optimum adaptation to the technical requirements.

Important operating and ambient conditions

- Rated operating voltage U_e
- Mains frequency f_N
- Rated insulation voltage U_i
- Busbar rated current I_{sas}
- Rated current for the supply end I_{zu}
- Rated surge current resistance I_{pk}
- Rated short-time current resistance I_{cw}
- Ambient temperature condition ϑ
- Atmospheric climatic stress, specifying the relative humidity and temperature
- Protection category of the overall system IP . . .
- Specification to DIN EN 60 529
- Protection category

Important basic data for planning and project management

- Applicable regulations and standards, both regional and international
- Electricity supply company conditions
- Operator-specific regulations
- Mains-specific protective measures/mains type
- Rated voltage and frequency
- Rated current with due regard for the number of conductors (infeed and busbars)
- Rated insulation voltage
- Short-circuit current at the point of installation
- Location of incoming cables, from above or below
- Number of incoming cables and wires, specifying the type and cross-section
- Number of outlets, specifying the operating load and the envisaged outgoing cables with type and cross-section
- For the outlet side, specification of the simultaneity factor and rated load factor of the relevant equipment items

Rated load factor

The rated load factor of a switchgear enclosure or part thereof (e.g. a field) comprising several main circuits refers to the ratio between the largest sum total of all currents anticipated at any given time in the affected main circuits and the sum total of the rated currents of all main circuits of the switchgear enclosure or observed part thereof.

Number of main circuits	Load factor
2 and 3	0.9
4 and 5	0.8
6 and 7	0.7
10 or more	0.6

Rated currents and short-circuit currents of standard transformers

Rated voltage U_N = 400 V	400 V		
Short-circuit voltage U_k		4 %[1]	6 %[2]
Power consumption S_{NT} [kVA]	Rated current I_N [A]	Short-circuit current $I_{k''}$[3] [kA]	
50	72	1.89	1.20
100	144	3.61	2.41
160	230	5.77	3.85
200	288	7.22	4.81
250	360	9.02	6.01
315	455	11.36	7.58
400	589	14.43	9.62
500	722	18.04	12.03
630	910	22.73	15.15
800	1156	28.86	19.24
1000	1444	36.08	24.05
1250	1805	45.09	30.06
1600	2312	57.72	38.48
2000	2882	72.15	48,10

[1] U_k = 4 % standardised to DIN 42 503 for S_{NT} = 50 . . . 630 kVA
[2] U_k = 6 % standardised to DIN 42 511 for S_{NT} = 100 . . . 1600 kVA
[3] $I_{k''}$ = Initial symmetrical short-circuit current of transformer when connecting to a mains supply with unlimited short-circuit lead

Design differences between TTA and PTTA

The following regulation applies to the manufacture of low-voltage switchgear and distributors with Rittal SV technology:
DIN EN 60 439-1 (DIN VDE 0660 part 500)
Low-voltage switchgear enclosures – requirements for type-tested and partially type-tested enclosures.

This standard makes a distinction between
- type-tested switchgear enclosures (TTA) and
- partially type-tested switchgear enclosures (PTTA).

This refers to the following:
Type-tested switchgear enclosures (TTA)
are switchgear enclosures or parts thereof (e.g. functional units, assemblies) which match the switchgear enclosure type-tested under the standard, without any major deviations from the original type or system.

Partially type-tested switchgear enclosures (PTTA)
are switchgear enclosures which are manufactured individually or in small quantities for specific application conditions and which contain both type-tested and non-type-tested assemblies, provided the latter are derived from type-tested assemblies (e.g. by means of calculation) which have passed the appropriate tests.

There are no quality differences defined between the two design variants TTA and PTTA. In other words, they are deemed to be of equal value.
However, both design variants require different proof and tests.

The following proof and tests must be provided for system configurationin line with regulations and evidence of CE conformity:

TTA/PTTA to DIN EN 60 439-1
- Compliance with the limit overtemperature
- Dielectric strength
- Short-circuit resistance
- Effectiveness of the PE conductor
- Creepage distances and clearance
- Mechanical function
- IP protection categories
- Wiring, electrical function
- Insulation
- Protective measures

Amongst type-tested switchgear enclosures TTA, this evidence is provided by one-off type testing and unit testing following assembly.

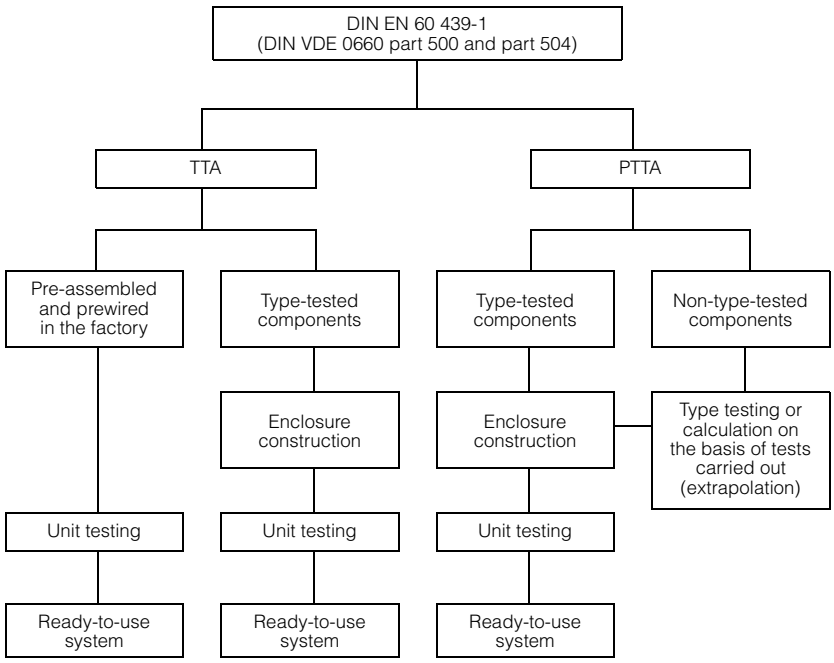
In the case of partially type-tested switchgear enclosures PTTA, complete evidence must be provided for each system installed, either by means of testing or by means of calculation based on the tests performed.

For details of the scope of testing for both design variants, please refer to table 7 in DIN EN 60 439-1 which contains references to the standard section number.

This standard specifies that random variation e.g. of switchgear and protective devices of different makes or models within a switchgear installation is no longer possible without evidence of testing or calculation. This evidence can only be supplied by the manufacturer/workshop.

Special consideration must be made for this fact, both when planning and when purchasing switchgear and distributors.

Difference between TTA and PTTA



Unit testing (final inspection of installations)

According to DIN VDE 0100 part 610 (original inspection), low-voltage installations, including switchgear and distributors, should be subjected to an original inspection prior to commissioning and handover to the customer.

On-site inspection of the customer's system is not necessary for switchgear and distributors, provided an inspection record from the manufacturer/workshop is available.

This cost-saving variant should be the norm in all cases where no retrospective modifications have been implemented on site.

3.4 Power supply units

Ripac power supply units – Open Frame 250 and 400 W Page 479

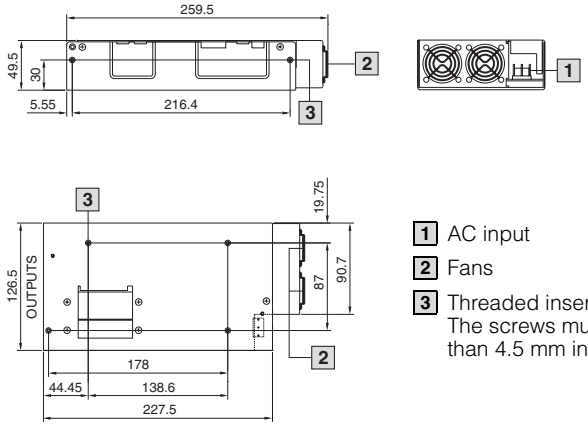
General specifications

	250 watts	400 watts
Model No. RP 35 A	**3686.622**	**–**
Model No. RP 60 A	**–**	**3686.623**
Model No. RP 85 A	**–**	**3686.629**
Operating temperature range	0°C to +70°C (derating from 50°C)	0°C to +70°C (derating from 50°C, 2.5 %/K)
Storage temperature	–40°C to +85°C	–40°C to +85°C
Mains buffering time (min. at 90 V AC)	16 ms minimum	15 ms minimum
Cooling	Fan-cooled	Fan-cooled
Isolation voltages	Input – output: 4350 V DC Input – enclosure: 2350 V DC Output – enclosure: 100 V DC	Input – output: 3000 V AC Input – enclosure: 1500 V AC Output – enclosure: 500 V DC
Radio interference suppression	EN 55 022 curve B	EN 55 022 curve B
Immunity to interference/emmission	EN 61 000-4-2 (level 4) EN 61 000-4-3 (level 3) EN 61 000-4-4 (level 4) EN 61 000-4-5 (level 3) EN 61 000-4-6 (level 3) EN 61 000-4-11 compliant	EN 61 000-4-2 (level 4) EN 61 000-4-3 (level 3) EN 61 000-4-4 (level 4) EN 61 000-4-5 (level 3) EN 61 000-4-6 (level 3) EN 61 000-4-11 compliant
Approvals	UL 1950, VDE 0805, EN 60 950, CSA 22.2, CE	EN 60 950, UL 1950, CSA 22.2 no. 234, CE

[1] All outputs short-circuit resistant to a maximum of 30 seconds.

Ripac power supply unit
Open Frame 250 W

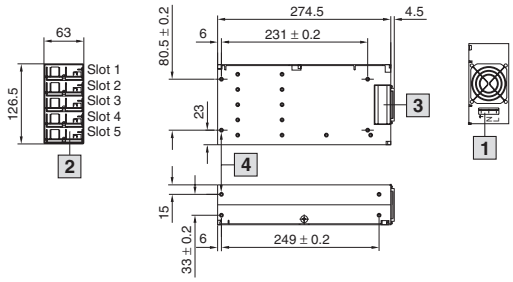
- On/off controller with three outputs
- Design: Solid
- 85 – 265 V AC/120 – 340 V DC
- Radio interference suppressed to EN 55 022 curve B, FCC curve B
- Approvals: EN 60 950, UL 1950, VDE 0805, CSA 22.2/CE



1 AC input
2 Fans
3 Threaded inserts M4 for fastening. The screws must not protrude more than 4.5 mm into the unit.

Ripac power supply unit
Open Frame 400 W

- Modular power supply unit
- 3 outputs
- Wide-range input (85 – 253 V AC)
- Power factor in accordance EN 61 000-3-2
- Radio interference suppressed to EN 55 022 curve B
- Immunity to interference in acccordance with EN 61 000-4-3, -5, -6 (level 3) EN 61 000-4-2, -4 (level 4) EN 61 000-4-11 compliant
- FASTON connectors mean faster installation in the terminal equipment
- Tested to EN 60 950, UL 1950 and CSA 22.2 no. 234



1 AC input
2 DC outputs
3 Fans
4 Threaded inserts M4 for fastening. The screws must not protrude more than 4.5 mm into the unit.

3.4 Power supplies

Ripac power supply units – Open Frame 600 and 1000 W Page 479

General specifications

	600 watts	1000 watts
Model No. RP 85 A	**3686.624**	**–**
Model No. RP 110 A	**–**	**3686.625**

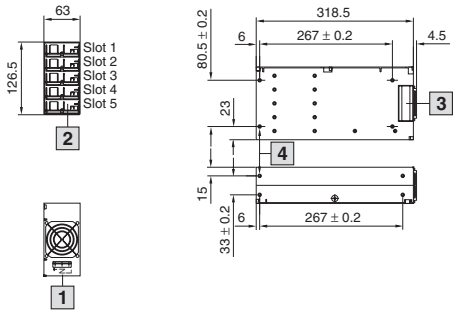
Approvals	EN 60 950, UL 1950, CSA 22.2 no. 234, CE	EN 60 950, UL 1950, CSA 22.2 no. 234, CE

Ripac power supply unit Open Frame 600 W

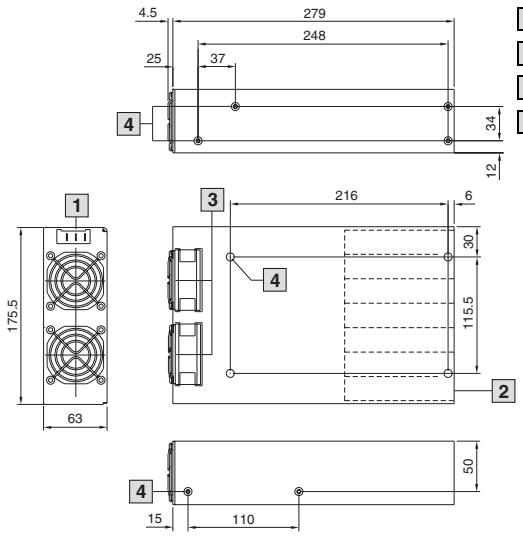
- Modul power supply unit
- 3 outputs
- Long-range input (85 – 253 V AC)
- Power factor in accordance EN 61 000-3-2
- Radio interference suppressed to EN 55 022 curve B
- Immunity to interference in acccordance with EN 61 000-4-2, -5, -6 (level 3) EN 61 000-4-2, -4 (level 4) EN 61 000-4-11 compliant
- FASTON connectors mean faster installation in the terminal equipment
- Tested to EN 60 950, UL 1950 and CSA 22.2 no. 234



1 AC input
2 DC outputs
3 Fans
4 Threaded inserts M4 for fastening. The screws must not protrude moe than 4.5 mm into the unit.

Ripac power supply unit Open Frame 1000 W

- Ultra-compact units with 3 outputs
- Suitable for universal applications, as the outputs can be set with in a broad range
- No base load required
- Peak current may be loaded for start-up operation of drives (up to 3 times the rated current for 10 seconds)
- Immunity to interference in acccordance with EN 61 000-4-2, -5, -6 (level 3) EN 61 000-4-2, -4 (level 4) EN 61 000-4-11 compliant
- Power factor correction to EN 61 000-3-2
- Long-range input: 85 – 265 V AC
- Radio interference suppressed to EN 55 022 curve A
- EN 60 950, EN 41 003, IEC 950, UL 1950, CSA 234 M 90, BS 6301
- SELV (all models < 48 V U_A)
- 48 V DC input for telecom applications available on request



1 AC input
2 DC outputs
3 Fans
4 Threaded inserts M4 for fastening. The screws must not protrude more than 4.5 mm into the unit.

3.4 Power supply units

Connection	Connector H15, IEC 60 603-2 keyable		2 connectors H15, IEC 60 603-2 keyable	
Approvals LGA design-tested	IEC 950/EN 60 950/VDE 0805 Protection category I/VDE 0100 EN 61 000-4-3 interference level 10 V/m EN 61 000-4-11		IEC 950/EN 60 950/VDE 0805 Protection category I/VDE 0100 EN 61 000-4-3 interference level 10 V/m EN 61 000-4-11	

- 482.6 mm (19″) module to IEC 60 297-3.
- Automatice changeover 115/230 V AC.
- All outputs are continuously short-circuit resistant.
- Overtemperature protection.
- AC-FAIL and SYSRESET signals.
- Integrated VME bus signals (AC-FAIL, SYSRESET).
- Design-tested: EN 60 950/VDE 0805 protection category I, VDE 0100.
- EMC standards EN 50 081-1 and 50 082-2.

PE earthing contact:
Must be connected to the PE conductor of the mains supply network!
L1/N: Mains conductors
L: Load connection
F: Sensor connection (sense)
0 VL: Common ground for outputs 1 – 3.

With sensor lead operation (5 V only):
Max. voltage compensation per lead 0.25 V.
The sensor lead must be connected to the load.

Without sensor lead operation:
For safe operation of the unit, +5 VL must be connected to +5 VF and 0 VL to 0 VF.

Caution:
Fire protection must be provided via the superordinate enclosure system!

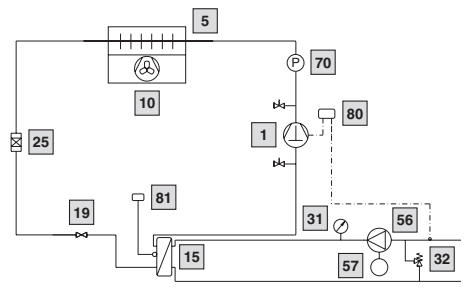
57 Motor for oil pump
70 High-pressure switch
80 Thermostat
81 Anti-frost thermostat

[1)] from SK 3337.500

Layout diagram



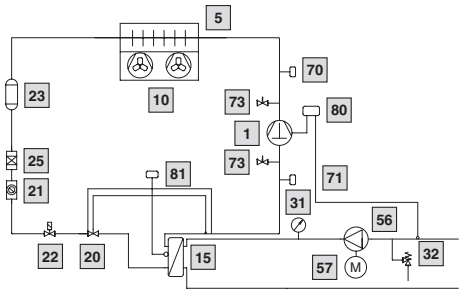
4.2 Recooling systems

In floor-standing enclosure for oil, cooling output 10600 to 26100 W Page 614

Key to the adjacent drawing:

- 1 Compressor
- 5 Condenser
- 10 Condenser fan
- 15 Evaporator coil
- 20 Expansion valve
- 21 Inspection glass
- 22 Magnetic valve
- 23 Liquid collector
- 25 Filter dryer
- 31 Manometer
- 32 Automatic bypass valve
- 56 Oil pump
- 57 Motor for oil pump
- 70 High-pressure switch
- 71 Low-pressure switch
- 73 Shut-off valve
- 80 Thermostat
- 81 Anti-frost thermostat

Layout diagram

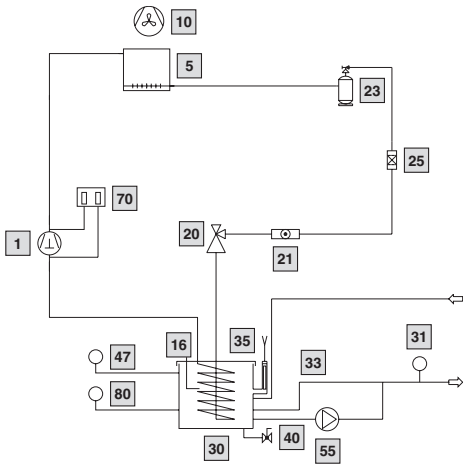


In TS 8 Top enclosure system, cooling output 6000/7500 W Page 615

Key to the adjacent drawing:

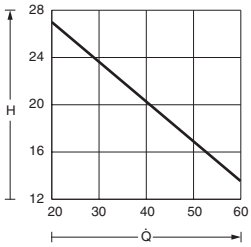
- 1 Compressor
- 5 Condenser
- 10 Condenser fan
- 16 Multi-coil vaporiser
- 20 Expansion valve
- 21 Inspection glass
- 23 Liquid collector
- 25 Filter dryer
- 30 Tank
- 31 Manometer
- 33 Fixed pump bypass
- 35 Filling
- 40 Tank drain
- 47 Level switch
- 55 Pump
- 70 High-pressure switch
- 80 Thermostat

Layout diagram



Characteristic curves of pump
Model No. SK 3335.060/3335.075

50 Hz



H = Delivery head H [m]
Q̇ = Delivery flow Q [l/min]

In TS 8 Top enclosure system, cooling output 10000 to 25000 W Page 616

Key to the adjacent drawing:

- 1 Compressor
- 5 Condenser
- 10 Condenser fan
- 16 Multi-coil vaporiser
- 20 Expansion valve
- 21 Inspection glass
- 23 Liquid collector
- 25 Filter dryer
- 30 Tank
- 31 Manometer
- 33 Fixed pump bypass
- 35 Filling
- 40 Tank drain
- 47 Level switch
- 55 Pump
- 70 High-pressure switch
- 80 Thermostat

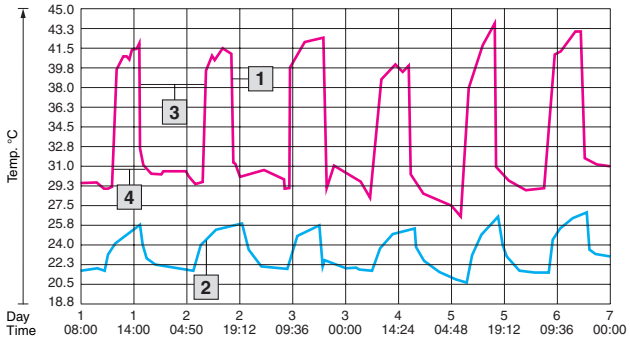
6.2 Geothermal heat exchanger

Terravent Page 831



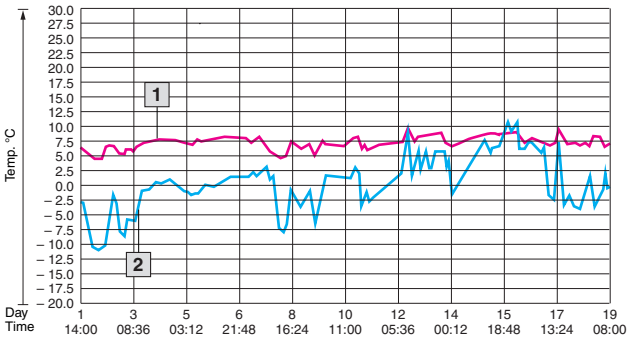
1 Internal temperature = Terravent inlet temperature

2 Terravent outlet temperature

3 Night-time operation

4 Day-time operation

Operating status – cooling:
1300 W heat loss from 8 am – 4 pm
800 W heat loss from 4 pm – 8 am
CS Outdoor modular enclosure, thermally insulated
Enclosure size: W x H x D = 800 x 1200 x 500 mm



1 Internal temperature = Enclosure internal temperature

2 External temperature

Operating status – heating:
No heat loss installed in the enclosure
External temperature below –10°C
CS Outdoor modular enclosure, not thermally insulated
Enclosure size: W x H x D = 800 x 1200 x 500 mm

Index

A

AC fans
– for microcomputer systems 523
– for subrack 523
Access door panels for FR(i) 783
Access sensor 777
Accessories – see system accessories 834
Accommodation system, 2 U
– for LSA installation kit 1029
Acoustic components
– for signal pillars, modular 1044
Acrylic door
– for Vario-Case iS 574
Acrylic front doors
– for Ripac Vario-Module 561
Acrylic glazed cover 878
Active Power System Module PSM 745, 775
Adaptor 476
– 3 U 1016
– for connector cutouts 860
– for CS partial mounting plates 916
– for front air infeed 659
– for levelling feet 849
– for L-shaped mounting angles 950
– for reader units 782
– for RNC 1019
– for twin castors 849
– metric/482.6 mm (19″) 1017
Adaptor bracket
– for TS 931
Adaptor door for DK-TS 871
Adaptor for NH isolators
– sizes 00 – 3 (100 mm) 345 – 348
– size 000 (40 mm) 311
– size 000 (60 mm) 337
– size 000 (Mini-PLS) 307
Adaptor kit
– 3 U/5 SU 1017
Adaptor pieces, 482.6 mm (19″) 1004
Adaptor plate 800
– for connector entry 975
Adaptor rail
– for PS compatibility 924
– for wiring systems 938
– rear, centre (E) 503
Adaptor set
– for RiLab 713
Additional unit
– Display unit 767
– GSM unit 767
– ISDN unit 768
Additives for recooling systems 668
Adjacent door locking, for TS, CL 883
Adjustment set
for support section CP-XL 221
AdvancedTCA 426 – 428
Air baffle 521
Air baffle system TS 8 648
Air block panel for slots 513
Air diverter 659
Air duct for discharge of waste air 659
Air ducting system
– for TopTherm roof-mounted cooling units 658
Air partition 521
Air/air heat exchangers 633, 634
Air/water heat exchangers 626 – 632
Airflow monitor 774
Alarm signal lamp, CMC-TC 780
All-glass door for TS 872
Aluminium centre piece
– for three-piece guide rails 512
Aluminium cross rail
– for TS 8 electronic enclosure 1014
Aluminium door, vertically hinged
– for Vario-Case iS 574
Aluminium front door
– vertically hinged for RiCase 567
Aluminium strip 1040
Analog sensor input module 779
Angle adaptor 90°
– CP-L to CP-S 214
– CP-XL to CP-L 214
Angle bracket for RNC 908
Angle bracket PS 933
Angle coupling, 90°
– CP-L, round 213
– CP-S 196
– CP-XL 224
Angle piece 934
– CP-L 213
– CP-S 197
– CP-XL 225
Angular baying brackets 865, 866
Articulated joint 90° CP-L 214
Assembly block for TS 924
Assembly components 931 – 938
Assembly kit
– for component adaptors 333
– for drawers 1016
Assembly parts 960
– for connectors 551
Assembly screws 1019
Assembly tool for spring washers 884
AT/ATX power supply 483, 484
ATCA 424 – 428
Attachment
– CP-S support arm system 194
– for support arm, stainless steel 278, 279
– Pole clamp 906
ATX industrial PCs 460 – 471
Axial fan 655

B

Back panel
– screw-fastened for RiCase 568
Backplanes CPCI 438 – 446
Backplanes VME 452 – 456
Bar insulation
– for 150 mm busbar systems 356
Bar support Maxi-PLS 398
Base 848 – 852
– for operating housing 235
– for printer, swivel 1058
– for tubular door frame 1058
– Pedestal 232
Base assembly bracket 850
Base assembly plate
– for base/plinth 838
Base isolators 360
Base mount
– for cast feet 233
Base plate
– for pedestal 231
– for pedestal, stainless steel 281
– Pedestal, small/large 234
Base tray sections
– infill PLS 321
– Mini-PLS 302, 309
– PLS 321
Base/plinth 834 – 847
– for areas at risk of earthquakes 153
– for ISV-TS 8 enclosures 409, 410
– for RNC 847
– stationary 840
Base/plinth adaptor
– for levelling feet 849
– for twin castors 849
Base/plinth baying brackets 838
Base/plinth cap 838
Base/plinth components
– front and rear, sheet steel 835
– front and rear, stainless steel 841
Base/plinth insert
– for Rittal TC Rack 804
Base/plinth trim panels
– for base/plinth TS 839
Base/plinth trim, modular 841
Base/plinth trims
– side, sheet steel 835
– side, stainless steel 841
Base/wall mounting bracket CP-S 198
Baying 861 – 868
Baying attachment 866
Baying brackets
– for base/plinth TS 838
– for TS/TS and TS/PS 865
Baying clamp 863, 864
– for back-to-back mounting 866
Baying connector
– for Data Rack 709
– for TS 864, 867
Baying cover, top 867
Baying kit 867
Baying seal, EMC 959
Baying system 861 – 868
Baying systems TS 8 147 – 148, 285, 295
Blanking cover
– for fibre-optic cutouts 1027
– ISV 419
– Maxi-PLS 404
Blanking panel 1025
Blanking plate, 482.6 mm (19″) 1013
Bottom covers
– for Ripac Vario-Module 559
Bottom-mounted adaptor
– for enclosure internal thermostat and hygrostat 661
Bracket, locatable for shelves 951
Bracket, wall bracket 906
Brackets or spacers 934
Brush strip 971
Built-in trim panel and spacer panel
– for VIP 6000 and Optipanel 1038
Bus enclosure BG 111 – 114, 272
Busbar 744
Busbar adaptor for NH isolators
– sizes 00 – 3 345 – 348
– size 000 (40 mm) 311
– size 000 (60 mm) 337
– size 000 (Mini-PLS) 307
Busbar connection adaptor
– for 40 mm busbar systems 310
– for 60 mm busbar systems 322, 323
– for signal pillar, LED compact 1041
– Mini-PLS 303
Busbar connector E-Cu 309, 319, 360
– PLS 321
Busbar gland Maxi-PLS 407
Busbar modules, ISV 418
Busbar supports 900
– 40 mm bar centre distance 308
– 60 mm bar centre distance 318
– 100 mm bar centre distance 343
– 150 mm bar centre distance 355
– 185 mm bar centre distance 351
– ISV 415
– Maxi-PLS 376, 390
– Mini-PLS 302
– PLS 320
Busbar systems
– 40 mm bar centre distance 302 – 315
– 60 mm bar centre distance 318 – 341
– 100 mm bar centre distance 343 – 349
– 150 mm bar centre distance 355 – 356
– 185 mm bar centre distance 351 – 353
– Accessories 360 – 365
– Mini-PLS 300 – 307
– PLS 320, 321

Busbars
– Cover sections 309, 319
– Covers 343, 351
– E-Cu 360
– Maxi-PLS 376, 390, 398
– Mini-PLS 302
– PLS 320
Bus-mounting fuse bases
– for 40 mm busbar systems 311
– for 60 mm busbar systems 334, 335
– Mini-PLS 307
– size 00 338
Bus-mounting on-load isolator
– size 00 338, 345
– size 1 339, 346
– size 2 340, 347
– size 3 341, 348
Bypass safety valve 667

C

C rails 928, 929
– Maxi-PLS 405
Cable chamber
– for TS 837
Cable clamp rails 979
– depth-variable 984
– for TC Rack 805
– for TS and 482.6 mm (19″) mounting frames 983
– ISV 420
Cable clamp strap
– for patch panels 985
– for Rittal TC Rack 805
Cable clamping bracket 980
Cable clamps 957, 981
– for cable clamp rails 979
Cable conduit/cable conduit holder 981
Cable connection kit
– for CS cooling units 663
– for CS heat exchangers 663
Cable duct
– for IW 251
– for mounting plate 978
– for vertical TS profile 977
Cable entry 964 – 976
– on gland plate for TS 965
Cable entry gland ISV 420
Cable entry grommets 965
Cable entry module CP-L, round 976
Cable entry panel
– 482.6 mm (19″) 992
Cable entry plates 964
– for CS basic enclosures 852
Cable fastening 982
Cable gland plates
– metal 969
– plastic 966, 967
Cable glands 958
– brass 972
– EMC 958
– for fibre-optic technology 988
– for IW worktops 976
– polyamide 972
Cable management
– for Data Rack 709
Cable management duct, 482.6 mm (19″) 991
Cable management panel 989
– 2 U 990
– 482.6 mm (19″), 1 U 989
– for TS 856
Cable management roof plate
– for TS, FR(i) 902
Cable route 986, 988
Cable routing
– across the 482.6 mm (19″) mounting level 992
– for QuickBox 980
– for TS, FR(i) 981
Cable routing channel
– 482.6 mm (19″) 990
Cable routing components for FR(i) 987
Cable shunting ring 984
– FM 810
Cable tie fastener 983
Cable ties 982

D

Data distributor 1021
Data Rack 708 – 710
DC fan
– for rear panel 476
– for subrack 523
DC fan mounting plate for TS 650
Deep cover ISV 419
Deflector for air duct system, 90° 658
Depth extension for FR(i) 987
Depth stays
– for Data Rack 710
– for PS 1006
– for TC Rack 805
– for TS 1009
Depth stays as divider kit
– for pull-out frame 1000
Depth stays as installation kit
– for mounting angles 1008, 1009
Designer cover for base/plinth TS 840
Designer glazed door for TS 871
Designer sheet steel door, vented for TS 871
Desk section
– for AP universal console 1039
– for TS 876
Desktop keyboard IP 65 1047
Device module Maxi-PLS 401
Diagonal cooling from front to back 520
Digital enclosure internal temperature display and thermostat 660
Digital sensor input module 779
DIN rail mounted device modules ISV 413
Display board with wall bracket 1030
Distribution enclosure ISV 409 – 420
– ISV order software 1061
Distribution enclosures
– FM 806
Distributor accessories 675
Distributor racks
– Data Rack 708 – 710
– Modular FM distributor racks 808 – 811
Divider kit
– for component shelves 950
– for pull-out frame 1000
– for swing frame, large 996, 998
– for swing frame, small 994
Divider panel 857
– for module plates TS 858
– for TS 857
– Maxi-PLS 407
Divider panel seal, EMC 959
Door cutout trim
– for subracks 540
Door locking
– for bayed suites 892
Door mounted fan
– for TS 8 server enclosures 652
Door stay 898
Door variants 869 – 873
Door, internal 895 – 898
Door-operated switch 956
Doors 869 – 873
– for KTS 584 – 588
– for Rittal TC Rack 804
Double front horizontal rail, with 10 mm extension (B1) 500
Double-membrane gland 973
Drawer, under-mounting IW 254
Drawers 942
– 482.6 mm (19″) 1015, 1049
– 482.6 mm (19″)/2 U for keyboard and mouse 1051
– Extension lock 952
– for keyboard and mouse 1053
– for keyboards 1052
– for RiLab 713
– for TS 876
– for under-mounting IW 254
– Installation kits 1016
– Tray 942
Drive chassis, vertical 544
Drive support 475
Duct connector for enclosures 1035
Dust guard trim
– for AE, AK, EB, KL, BG 899
– for TS, ES, FR(i) 900

E

Earth clamps, EMC 959
Earth contact 511
Earth rails 962, 963
Earth straps 960
Earthing kit
– for QuickBox 962
– for TC Rack 962

Earthing kit, complete
– for TE 961
– for TS 961
Earthing plate 961
Earthing point, central 961
Earthing set
– for RiCase, Vario-Case iS 565
– for Ripac Vario-Module 561
– pre-assembled, for DK-TS 962
Earthing strap 960
Earthquake kit, TS 8 153
E-Box EB 110
E-Cu busbar connector
– Mini-PLS 302
Edge protector 971
EL wall-mounted enclosure 728 – 732
Electric lifting pillar 229
Electronic condensate evaporator 665
Electronic enclosures 142
EMC
– Contact strip 507
– Earth clamps 959
– Enclosures/cases 289 – 292
– Fan-and-filter units, outlet filters 640, 641
– Front panel with LED and mains switch 457
– Front panels, hinged 539
– Front/rear panels for ventilation 521
– Gaskets 506, 507
– Gland plates 958
– Rear panels for fan installation 522
– Shield bus 959
– Shielding bracket 957
– Shielding plate for AC/DC fans 524
– Subrack installation components 506 – 507
EMC seals
– Baying seal 959
– Divider panel seal 959
– for face plates and filler panels 429
– for mezzanine front panels 540
Enclosure attachment
– CP-L for support arm connection 120 x 65 mm 207, 210
– CP-L for support arm connection Ø 130 mm 206, 212
– CP-S, stainless steel 278
– CP-XL, rectangular 223
– CP-XL, round 222
– tilting, bottom-mounting CP-L, rectangular 207
– tilting, CP-S configuration 193
Enclosure connector, adjustable 907
Enclosure duct connector 1035
Enclosure flange 237
Enclosure heaters 655
– for CS Outdoor 656
Enclosure internal fan for TS 8 653
Enclosure internal temperature display and thermostat, digital 660
Enclosure internal thermostat 661
Enclosure key 891
Enclosure light 954, 955
Enclosure reinforcement 237
Enclosure surface connector 1034
Enclosure systems ES, TS 134 – 153
– PC 257 – 260, 283
– stainless steel 284, 285
Enclosures
– ISV-TS 8 409, 410
– KTS, climate 582, 583
Enclosures SV-TS 8
– for coupling sets 399
– for incoming/outgoing circuit 392, 393
– for NH fused isolators 394 – 397
End caps
– for bus-mounting fuse bases 334 – 335
End cover
– for busbar supports 308, 319, 343
– for Mini-PLS busbar supports 302
– for PLS busbar supports 320
– Maxi-PLS 376, 390
End pieces
– for guide rails, aluminium 510
– for three-piece guide rails 512
End support for Maxi-PLS 376, 390
– for T-busbars 398
Energy-Box 749
Entry grommets
– for cables 965
– for connectors 965, 974
Entry panel 989
Ergoform S lock system 885
ESD connection point 963
ESD contact 513
ETSI rack 803 – 805
Ex enclosures 287, 288
Expansion connector PLS 321
Expansion kit
– for earth rail, vertical 963
– horizontal cable mangement 987
Explanation of the fastening dimensions in interior installations 1020
Extension cable RJ 11, RJ 12 772
Extension cover
– for bus-mounting fuse bases 334 – 335
Extension lock for drawers 952
Extension RJ 12 787
Extension unit, CMC-TC 776
External mounting bracket for PK 102
Extractor handles type I and type II 528
Eyebolts 904

F

Face plate
– for front boards and RTMs 428
Fan 24 V DC with speed control 787
Fan Alarm System FAS 787
Fan Control System FCS 786
Fan cross member
– for internal fan mounting panel 653
Fan expansion kit 649
– for door mounted fan TS 8 652
Fan mounting plate 520
– DC for TS 650
– for TS 649
Fan roof, modular, two-piece
– for TS 8, FR(i) 651
Fan systems for TS 8 647 – 653
Fan unit, active for TE 651
Fan-and-filter units 635 – 639
– EMC 640, 641
Fans subrack
– AC fans 523
– DC fans 523
Fastener for support arm connection 1040
Fastening bolts
– for base/plinth 838
– for component shelves 953
Faston 551
Feet 710, 845, 848
– for monitor housing 251
– for Ripac Vario-Module 559
Female connectors 485 – 550
– Type M24/8 485
Fibre-optic
– Blanking cover 1027
– Breakout box 1 U 1028
– Cable management panel 991
– Marshalling enclosures 726
– Patch panels 1024, 1025
– Shunting panel 992
– Shunting ring 986
– Small distributor 724, 725
– Small distributor, polycarbonate 727
– Splicing boxes and accessories 1026, 1027
– Splicing cassette holder 1026
– Splicing distributor 1028
– Splicing distributor extension unit 1028
Fibre-optic cable management panel 991
Filler panel 429
Filter holder for roof ventilation 667
Filter mats
– for base/plinth component, vented 840
– for centrifugal fans/front outlet grilles 2 U 668
– for climate control doors 669
– for discontinued cooling units 668, 669
– for Mini recooling systems 669
– for one-piece gland plate 851
– for TopTherm cooling units 668, 669
Filter module for DC fan with fault monitoring 457
Filtered IEC mains inlet 458
Fine filter mats
– for fan-and-filter units/outlet filters 670
Finger guard
– AC/DC fans 524
Fixture with rods, 3 U
– for LSA strips 1029
Flange 482.6 mm (19″) 496 – 497
Flat front panels
– for type I, II, IV, IVs or VII handles 526
– for type V and VI handles 534
– with type I or II extractor handle 525
– with type V handle and PCB holder 533
Flat screen 1046
flexRack(i)
– Network enclosures 703 – 707
– Server enclosures 738
Flow regulator valve 667
FM
– Cable shunting ring 810
– Cable shunting strips 810
– Distribution enclosures 806
– Distributor racks 808 – 811
– System rods 810
– System strips 809
– Universal mounting bracket 811
– Wall-mounted distributor 807
Foam rubber cable clamp strip 965
Folding keyboard 1049
Folding lever handle for Rittal CM, CL 133
Fold-out tray
– for keyboard and mouse 1049
Foot rest
– for cast feet/pedestals CP/IW 233
Frame connector, adjustable 907
Free-standing enclosures
– ES 5000 136 – 137, 285
– Rittal CL 130 – 131
Front corner trims
– for Ripac Vario-Module 560
Front doors
– for RiCase 566 – 567
– for Ripac Vario-Module 561
– for Vario-Case iS 574
Front flanges
– for Ripac Vario-Module 560
Front handles 475, 497
– for industrial PCs 475
– for Ripac Vario-Module 560
– for subrack 497
Front outlet grille 2 U
– for centrifugal fans 667
Front panels
– EMC, with LED and mains switch 457
– for ATX power supply 483
– for Compact Panel 1036
– for VIP 6000 and Optipanel 1035, 1036
Front panels for subracks 525 – 527
– as filler panels 537 – 538
– for type III extractor handle 532
– front panels, handles 525 – 527

– hinged 538
– to conceal the vertical support 508
Front panels, handles 539
Front panels, subracks
– to conceal the vertical support 508
Front trim panels for AT/ATX 476
Front/rear panels for ventilation 521
Fuse bases, size 00 338
Fused isolators
– size 00 336, 349, 353
– size 1 – 3 353
– sizes 000 – 3 336, 337, 349, 353
Fusible elements
– for 40 mm busbar systems 311
– for 60 mm busbar systems 334, 335
– Mini-PLS 307

G

Gas pressurised spring 230, 878
Geothermal heat exchanger 831
Gland plate 851, 852, 970, 971
– EMC 958
– for CS basic enclosures 852
– for Rittal CM/CL 132
– for TE 903
– metal 968, 969
– plastic 967
– with membranes 967
Gland plate modules for DK-TS 851
Glazed door
– for DK-TS 870
– for TS, CL 869
Glazed front door 566
Grommets for
– Cable entry 965
– Connector entry 965, 974
Ground contact 511
Guide rails
– for drive chassis 544
– for subracks 509 – 513

H

Handle adaptor 869
Handle frame
– for operating housing 1033
Handle set 1030
– for Optipanel 1031
– for VIP 6000 1033
Handle systems 885
– for universal installation 784
– with electromagnetic locking 781
Handles
– Comfort handle 881, 882
– Comfort handle master key 781
– Corner handle 1032
– Ergoform-S handle 885
– for ATCA 429
– for component shelves 953
– for mounting plates 912
– for subracks 497
– Mini-comfort handle 884
– Padlock handle system 885
– Plastic handles 886
– Security handle with code 883
– Swivel handle 883
– T handles 887
– Transponder handle 784
– U handle 1032
Heat exchanger
– Air/air 633, 634
– Air/water 626 – 632
– for CS compact enclosures 828
– for CS modular enclosures 827, 828
– for CS Toptec 830
– geothermal, Terravent 831
Heater module for CS Outdoor 656
Heaters 654 – 655
Heavy-duty component shelves 945, 946
Hinge attachment
– for partial mounting plate TS 914
– for TS, ES mounting plates 911
Hinge pin remover 894
Hinged blanking plate 1013
Hinged cable support 951, 952
Hinges 893 – 894
– 130° 893
– 180° 894
– exterior 106
– for blanking plates 1013
– for polycarbonate enclosures 102
– for side panels TS 854
Holder for mouse 1055
Hood
– for fan-and-filter units/outlet filters 666
Horizontal assembly kit 508
Horizontal rail sets
– for Vario-Case iS 572
Horizontal rails 498 – 505
Horizontal rising main 675
Horizontally hinged blanking plate 1013
Horizontally hinged FT stay 878
Hose-proof hoods
– for fan-and-filter units/outlet filters 666
Housing coupling
– CP-L for support arm connection 120 x 65 mm 212
– CP-S for support arm connection CP-S/CP-L 195
– CP-S stainless steel 278
– CP-XL 223
Humidity sensor 773
Hygrostat 661

I

Identification label support
– for NH fused isolators, size 00 363
Identification labels
– for bus-mounting fuse bases 334, 335, 363
Identification strip (J) 504
Identification strips 879, 900
– for patch panels 1025
– for type I, II extractor handle and type IV injector/extractor handle 529
– for type V handles 535
Immersible recooling systems
– for emulsion 621 – 623
– for oil 618 – 620
Incandescent lamps
– for steady and flashing light components 1043
Industrial networking 296
Industrial PCs
– Accessories 475, 476
– Rack-mount systems 462 – 471
Industrial Workstations 238 – 255
– Accessories 250 – 255
– Enclosures 243 – 246
– Fast selection 240 – 242
– Worktops 247 – 249
Infill panels 1014
Infrared motion detector 778
Injector/extractor handles 528 – 530
Input module
– for analog sensor 779
– for digital sensor 779
Insert strip for component adaptors/supports 362
Inserted screw nuts M12 353
Inserts
– for busbar supports 319, 343, 351
Installation kit
– Depth-variable 949
– for back-to-back mounting plates TS 911
– for component shelves 949
– for FR(i) and 482.6 mm (19″) mounting frames 1012
– for mounting angles 1006, 1009
– for servers 1012
Instrument cases/system enclosures
– RiCase 562 – 563
– Vario-Case iS 569 – 571
– Vario-Module 555 – 558
Insulated centre part
– for three-piece guide rails 512
Insulating strip (G) 505
Integrated louvres 666
Interface box 1059
Interface card for TopTherm 662
Interface flap 1059
Interference suppression capacitors for fans 780
Interior door for AE IP 69K 873
Intermediate hinge
– CP-L 215
– CP-XL 225
Internal fan mounting panel for TS 8 653
Internal latch
– for side panel, plug-type 855
Isolator chassis Maxi-PLS 377, 391
Isolator door locking
– USA version 892
Isolators
– size 000 307, 311, 337, 358
– size 1 358
– sizes 00 – 3 336 – 339, 345, 346, 349, 353, 358, 359
ISV modules 411 – 418
ISV-TS 8 enclosures 409, 410
IT cooling 758 – 761
ITS
– Keyboards 800, 801
IW
– Base for tubular door frame 1058
– Cable duct 251
– Cast feet 845

J

Junction box with multi-functional bracket 749

K

Keyable guide rails
– aluminium, three-piece 512
– for rear I/O assemblies 511
– plastic 510
– with 1/2 HP offset 511
Keyboard
– 482.6 mm (19″) 1050
– 482.6 mm (19″)/4 U stainless steel 1047
– for kiosks 800, 801
– IP 65 1047
– pull-out 1048
Keyboard lid
– for RiCase 566
– for Vario-Case iS 573
Keyboard rack, 482.6 mm (19″) 1050
Keyboard support 1048

Keying pin
– for mezzanine cards 540
Keying/card ejectors 514
Keys 514
– for QB, FR(i) 891
Kiosks 790 – 801
– Alpha-Line 796
– Arc-Line II 792
– Opti-Desk 794
– Opti-Line II 793
– Opti-Wall 795
– Out-Line Pro 798
– Out-Line Wall 797
– PC systems 799
Kiosks computer 799
Kit for separate frame 938

L

Label panel
– for signal pillars, modular 1044
Laminated copper bars 361
Latch for adjacent door TS 883
Leakage sensor 778
LED lamp 1043
Levelling feet 845, 848
– for Data Rack 710
Lid
– for Vario-Case iS 573
Lifting pillar, electric 229
Lights 954, 955
– IW 255
Liquid cooling package 671 – 672
Locatable bracket for shelves 951
Locating adaptor, Command Panel 209
Lock
– for side panel, plug-type 855
Lock “15” 891
Lock and push-button inserts 881, 882
Lock components for frame TS 869
Lock cover 890
Lock for drawer extension 952
Lock inserts 881, 882, 888
Lock systems 881 – 892
Lockable and adjacent door
– for TS 872
Locking bar latch 884
Longitudinal connector Maxi-PLS 376, 390
Long-stroke keyboard 800
Lug terminal connection parts
– for NH fused isolators, size 00 365
– for NH isolators, sizes 1 to 3 365

M

Magnetic card reader 782
Mains switch 457
Male connectors 546 – 551
Management system
Aprisma Spectrum Enterprise Manager 788
Marshalling enclosure, fibre-optic 726
Maxi-PLS 366 – 407
Maxi-PLS divider panel modules 407
Members 943
Membrane gland plate 967
Membrane keyboard 801
Metal cable ties 958
Metal filter for climate control units 669
Metal gland plates 968, 969
Meter mounting board module, ISV 418
Mezzanine front panels 539
Micro air/water heat exchanger,
wall-mounted 626
Micro-switch 530
– for NH isolators/NH fused isolators 363
– mounting clip 531
– with cable and connector 531
Midi cooling units 590, 602
Mini cooling unit in horizontal format 596
Mini recooling systems
– for wall mounting 610
Mini-comfort handle 884
Mini-PLS 302
Mini-PLS busbar system 300 – 307
Mini-recooling systems 608, 609
Mobile base on castors 846
Mobile pedestal 235
Mobile workstation 1057
– see RiLab mobile workstation 711 – 713
Modular CPCI bridge 443
Modular enclosure technology 295
Modular front design 874 – 876
Modular low profile bridge 443
Modular Power Concept PMC 750 – 757
Modular system AT/ATX Vario Economy 467
Module panel 1023
Module plates 903
– for individual cable entry 969
Modules ISV 411 – 418
Monitor frame 879
Monitor housing IW 250
Monitor housing, spacer plate 252
Monitor shelf mounting kit 953
Monitor, flat 1046
Monitor, support plate 252
Monitor/keyboard unit, 1 U 739
Monitoring 762 – 789
Monitoring of climate control units 785
Monitoring system
– Master 769
– Processing unit 766
– SSC 741
Monitors/keyboards 1046 – 1050
Motion detector, CMC-TC 778
Mounting
– Wall mounting 906
Mounting adaptor 1012
– for speed control 662
Mounting aid 1018
Mounting angles 253, 1003 – 1007
– C rails 928, 929
– Centre fastening attachment 1008
– for CS modular and basic enclosures 1007
– for RiCase 564
– for TC Rack 805
– for Vario-Case iS 572
– Installation kits 1008, 1009
Mounting angles, 482.6 mm (19″) 1003
– for TS 8 electronic enclosure 1004
Mounting base for power supplies 485
Mounting blocks 507
– for AE 935
Mounting bracket 930, 932
– for Premium KL 909
– Maxi-PLS 404
– PK enclosures 102
Mounting clip
– for multi-functional
component adaptor 363
– for plastic covers 531
– for support rails 927
Mounting components
– for signal pillar 1044, 1045
Mounting frame 1007
Mounting frame 54 U
– for TS, FR(i) 1018
Mounting kit 508 – 509
– 2 U 1017
– for busbar 744
– for monitor shelf 953
– for Vario-Case iS 572
– for VIP 6000 and Optipanel 1037
Mounting module 772
Mounting plate adjustment bracket for KS 912
Mounting plate attachment 910, 911
Mounting plate infill for TS 912
Mounting plate modules ISV 411
Mounting plates 929
– for cast aluminium enclosures 105
– for compact enclosures, Outdoor 916
– for CS Basic and modular enclosures 916
– for CS Toptec 916
– for GA 105
– for KL 909
– for polycarbonate enclosures 102
– for Premium KL 909
– for RiCase 915
– for Ripac Vario-Module 559
– for RNC 915
– small 915
Mounting rails for RiCase 564
Mounting set
– for NH isolators, size 000 364
Mounting unit 1 U 771
Mounting/cable management panel 988
Mouse holder 1055
Mouse, mousepad IP 67 1054
Mousepad
– for keyboard drawer 1050
– passive 1055
Mousepad support 1054 – 1056
Multi-functional component adaptor
– for 40 mm busbar systems 312 – 315
– for 60 mm busbar systems 325 – 327
Multiple lock 890
Multi-seal inserts 973
Multi-tooth screws 937, 1019

N

Network enclosures
– based on Rittal flexRack(i) 703 – 707
– based on Rittal TE 7000 682 – 686
– based on Rittal TS 8 687 – 702
Network management systems 788
NH bus-mounting fuse bases,
size 00 338
NH bus-mounting on-load isolators
– size 00 338, 345
– size 1 339, 346

– size 3 341, 348, 359
– sizes 00 – 3 347, 348, 358, 359

Operating panel 880
Optical components
– for signal pillars, modular 1043
Optipanel 170 – 178
– Standard sizes 178
Outdoor enclosures 814 – 831
Outlet filter 635 – 639, 666
– EMC 640, 641
Output module for room door 780
Overvoltage protection 745

P

Panel
– for cable routing 990
– for monitors 1049
– with solid tray 1025
Paper tray 1058
Partial doors for TS 875
Partial mounting plates
– for ES, CS Basic and modular enclosures 914
– for TS, CL, CS Toptec 913
Partition 860
Patch panels
– for copper technology 1021 – 1023
– for fibre-optic splicing box 1026 – 1028
– for fibre-optic technology 1024, 1025
PC enclosure systems 256 – 260
– stainless steel 283
PC systems kiosks 799
PCB ejector/retainer 514
PCB holder
– for box type plug-in units 544
– for front panels 536
PCB holder kit 536
PE busbar 962
Perforated mounting strip
– for AE stainless steel, AP universal lectern 896
Perforated plate
– Base/plinth trim, modular 841
PG segments 971
Pillar 236
– Lifting pillar, electric 229
– small 235
Plastic
– Cable gland plates 966, 967
– Covers for PCBs 531
– Enclosures KS 123 – 124
– Gland plates 967
– Handles 886
– Rivet 978
Plastic caps
– for Vario-Case iS 575
Plate
– for base mounting 838
– Spacer plate for monitor housing 252
– Support plate for screen 252
Plate clamps 324, 344, 352
PLS busbar systems 320, 321
PLS cover 364
Plug & play connection cable 743
Plug-in connector 405, 407
– for component adaptor 362
Plug-in for HP Open View 789
Plug-in modules for busbar 745
Pole clamp 906
Polycarbonate enclosures PK 100 – 103
Potential equalisation rails 962, 963
Power circuit-breaker modules ISV 414
Power Cooling System PCS 674
Power Distribution Module PDM 743
Power Distribution Rack PDR 743
Power Modular Concept PMC 750 – 757
Power pack
– for PU, FCS, FAS 771
– for TFT monitor and touchscreen 1047
Power supply backplanes 444 – 446
Power supply units 482 – 485
Power System Module PSM 744
Power System Module PSM, active 775
Premium Line KL 271
Premium Panel 274

Premium TFT 17″ 1046
Primer/paint 858
– Contact paint 959
Printer base, swivel 1058
Printer rack 1056
Printer trolley 1057
Profile blanking frame for TS 873
Programming cable 771
Pull-out frame, 482.6 mm (19″) 1000
Pull-out rails 943
Punched rail
– 18 x 38 mm, TS 923
– 23 x 23 mm, PS 925
– 23 x 73 mm, PS 925
– 25 x 38 mm, TS 923
Punched section with mounting flange
– 17 x 73 mm, TS 921
– 23 x 73 mm 922
– 23 x 73 mm, PS 926
Punched section without mounting flange
– 23 x 73 mm, PS 925
– 45 x 88 mm, TS 922
Punched strip 505
Push-button and lock inserts 881, 882

Q

Quality Point attachment IW 250
Quick-assembly block 934
QuickBox wall-mounted enclosures 718 – 720
Quick-change frame
– for TopTherm roof-mounted cooling units 665
Quick-fit baying clamps 863
Quick-fit component adaptors Mini-PLS 305
Quick-release fastener
– for QuickBox 891

R

Rack-mount accessories
– for industrial PCs and storage devices 476
Rack-mount systems
– ATCA 424 – 428
– for CPCI 432 – 437
– for industrial PCs 462 – 471
– for storage devices 472 – 474
– for VMEbus 447 – 451
Rack-mount systems, Slim-Box
– for CPCI 433
– for VMEbus 447
Rack-mounted cooling units 644
Rack-mounted fans 645
Rack-mounted recooling system 673
Rail holder 1031
Rail mounting bracket 935
Rail spacing brackets
– for patch panels 985
Rail systems 917 – 930
Rails
– Clamp rails for cables 979
– for EMC shielding bracket and strain relief 957
– for interior installation 909
– for Quality Point 253
– for Rittal CM, CL 133
– Support rails for TS, PC-TS 915
Rain canopies for AE 899
Reader unit adaptor 782
Rear adaptor rail, centre (E) 503
Rear door
– for fan installation, for RiCase 568
– vertically hinged, for RiCase 568
Rear feet
– for Ripac Vario-Module 561
Rear panel bracket 893
Rear panels
– for AT/ATX Economy 476
– for fan installation 522
Rear trim for RiCase 565
Recooling systems 606 – 618
– additives 668
– immersible, oil/emulsion 618 – 623
– in a floor standing enclosure 611
– in a floor standing enclosure for oil 613, 614
– in an industrial enclosure 617
– in TS 8 615, 616
– Mini 608 – 610
Redundant power supply
– for ATX 484, 485
– for RAID 484
Reinforcement bracket
– for TS, ES, AP universal console 851
Reinforcement for enclosure 237
Relay output module 779
RiBox system enclosures 1 U 554
RiCase 562 – 568
Ride-up roller
– for TS, ES, PC 898
RiLab mobile workstation 711 – 713
RimatriX5 678, 679
Ring board 1030
Ripac
– Compact 493
– ECO 488
– for CPCI 434 – 437
– for VMEbus 448 – 451
Ripac box type plug-in units 541 – 545
– for drives 544
– individual components 542, 543
– type I 541
Ripac power supply units 479 – 480
– Open Frame 479
Ripac Vario 489, 490
– EMC 491, 492
Ripac Vario Mobil 494
Ripac Vario-Module 555 – 561
– EMC 554, 556
Rising main, horizontal 675
Rittal RiCase 562 – 568
RJ 12 extension 787
RNC enclosure 716
– Universal enclosure 717
Roof 899 – 904
Roof insert
– for Rittal TC Rack 804
Roof mounting screw 904
Roof plates 901
– for Data Rack 709
– for TE 903
– Maxi-PLS with pressure relief function 406
– Maxi-PLS, vented 406
– TS 664
Roof-mounted
– Cooling units 590 – 594
– Heat exchanger air/water 630, 631
Roof-mounted fans 647
– for the office sector 648
Room door output module 780
Rotating, tilting monitor shelf 712
Rotation range limiter CP-XL 226
Rotation range restrictor 226
Rubber mat 254

S

Screen, flat 1046
Screen, support plate 252
Screw/plug-in connections 551
Screws 1019
Sealing bar
– for VIP 6000 and Optipanel 1037
Section corner piece 90°, CP-L 204
Section for cable entry
– for TS, CM, CL 965
Security handle with code 883
Security lock 890

– for CPCI and VME systems 457, 458
– for Data Rack 709 – 710
– for FM distribution racks 809 – 811
– for industrial PCs and storage devices 475
– for ISV 419, 420
– for Maxi-PLS 401 – 407
– for polycarbonate enclosure PK 102, 103
– for RiCase 564 – 568
– for RiLab 712 – 713
– for Ripac Vario-Module 559 – 561
– for Rittal Data Rack 709 – 710
– for Rittal TC Rack 804, 805
– for subracks 506 – 551
– for system climate control 657 – 670
– for Vario-Case iS 572 – 575
– for voltage supply 746 – 749
System adaptor for FR(i) 930
System attachment Maxi-PLS 376, 390
– for vertical coupling set 400
System covers 324, 344
– for NH isolators, size 1 346
System enclosures
– RiBox 554
– Ripac Vario-Module 555 – 561
System lights 954, 955
System lights, FM 809
System strips, FM 809
System support rails 926
System windows 877

T

T connection kits Maxi-PLS 398
T handles 887
T-bar support Maxi-PLS 398
T-busbars Maxi-PLS 398
TC rack system 803 – 805
TE 7000
– Network enclosures 682 – 686
– Server enclosures 736
TE socket strip 748
Technical information 1076 – 1078
Telecom rack 803 – 805
Telephone distributor 1021
Telescopic slides 475, 943
– for component shelves 951
Temperature display and thermostat, digital, enclosure internal 660
Temperature sensor 773
– for DC fans 524
Terminal block SV 420
Terminal boxes KL 107 – 109, 270
Terminal connection
– for NH fused isolators, size 00 365
– for NH fused isolators, sizes 00 – 3 365
– for NH isolators, sizes 2 and 3 365
Terminal studs Maxi-PLS 377, 391
– for NH fused isolators 405
Terravent 831
Test adaptor
– for CS Outdoor climate control equipment 663
TFT display, 15″ 1050
TFT monitor 1046
Thermostat 661
– digital 660
Threaded bolts Maxi-PLS 377, 391
Threaded inserts
– for RiCase, Vario-Case iS 564
Threaded inserts (I) 504
Threaded inserts M6 for KS 937
Three-phase connection cable 745
Tightening tool 958
Tilt adjustment 231
Tilting adaptor ± 45°
– CP-L, Ø 130 mm 205
Tilting adaptor 10°
– CP-L for support arm connection 120 x 65 mm 206
– CP-S stainless steel 278
Tilting adaptor 25°/60°, CP-XL 222
Tilting adaptor, 10°
– CP-L for support arm connection Ø 130 mm 205
Top covers
– for Ripac Vario-Module 559
Top mounted joint
– CP-L 216
– CP-S 198
– CP-XL 227
Top mounting module for TS, FR(i) 900
Top-hat rail module 1021
TopTherm cooling units 590 – 604
– stainless steel 590 – 604
TopTherm heat exchangers 633, 634
Touchscreen 1046
Tower feet for RiCase 567
Transponder handle TS 8 784
Transport and mounting handle
– for TS, CL, ES doors 898
Transport bracket 866
Transport castors
– for base/plinth TS 837
– for base/plinth, complete 844
– for TE 849
Transport handles for mounting plates
– for TS, ES 912
Transport kit for DK-TS 849
Transport plinth 842
Tray, drawer tray 942
Trim
– for subracks 540
Trim frame
– for horizontal assembly kit 509
– for slimline cooling units 664
– for TS 873
Trim panel 265
– for cast feet 233
– for TS 875
– Pedestals CP/IW 233
Trim piece
– hinged at the top, for TS 874
Trim section, rear 497
Trolley, mobile workstation 1057
TS
– Adaptor rail for wiring systems 938
– Air baffle system 648
– Assembly block 924
– Network enclosures 687 – 702
– Punched rail 923
– Punched sections with mounting flange 921, 922
– Punched sections without mounting flange 922
– Server racks 737
– Support strips 924
– Transponder handle 784
TS 8 enclosures 138 – 153
– Corner enclosures 868
– for NH fused isolators 394, 395
– stainless steel 284
Tube
– CP-L 204
– CP-S 193
– CP-S stainless steel 277
– CP-XL 220
– Support section CP-S stainless steel 277
Tube bracket 90° CP-L 204
Turn-lock fastener for PK 102
Turntable 253
Twin castors 848
Type III handle, extractor 532
Type V and VI handle 535 – 536

U

U contact makers Maxi-PLS 377, 391
U handle 1032
U nuts 936
U-channel front panels
– for type I, II, IV, IVs or VII handles 527
– for type V and VI handles 534
– with type I, II extractor handle or type IV injector/extractor handle 526
Under-floor frame
– for DK-TS, FR(i) 846
Uninterruptible power supply 482
Unit, control unit 229
Universal bracket 935
– for front panel support 533

a brand of Schneider Electric

Telemecanique

Simply Smart !

telemecanique.com

This international site allows you to access all the Telemecanique products in just 2 clicks via comprehensive range data-sheets, with direct links to:

- Complete library: technical documents, catalogs, certificates, FAQs, brochures...
- Selection guides from the e-catalog.
- Product discovery sites and their Flash animations.

You will also find illustrated overviews, news to which you can subscribe, a discussion forum, the list of country contacts...
To live automation solutions every day!

Flexibility

- Interchangeable modular functions, to better meet the requirements for extensions
- Software and accessories common to multiple product families

Ingenuity

- Auto-adapts to its environment, "plug & play"
- Application functions, control, communication and diagnostics embedded in the products
- User-friendly operation either directly on the product or remotely

Simplicity

- Cost effective “optimum” offers that make selection easy for most typical applications
- Products that are easy to understand for users, electricians and automation specialists
- User-friendly intuitive programming

Compactness

- High functionality in a minimum of space
- Freedom in implementation

Openness

- Compliance with field bus, connection, and software standards
- Enabling decentralised or remote surveillance via the web with Transparent Ready products

Control and signalling units Ø 22

Harmony® XB4, metal

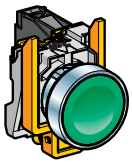
Pushbuttons, switches and pilot lights

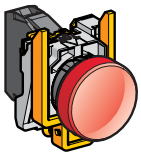
Description

The Ø 22 range of metal control and signalling units comprises:

Complete units with chromium plated metal bezel, XB4 B

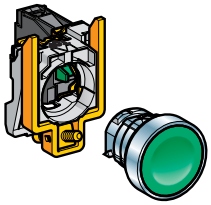


Pushbuttons and switches

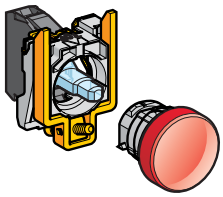


Pilot lights

Sub-assemblies with chromium plated or black metal bezel, ZB4 B

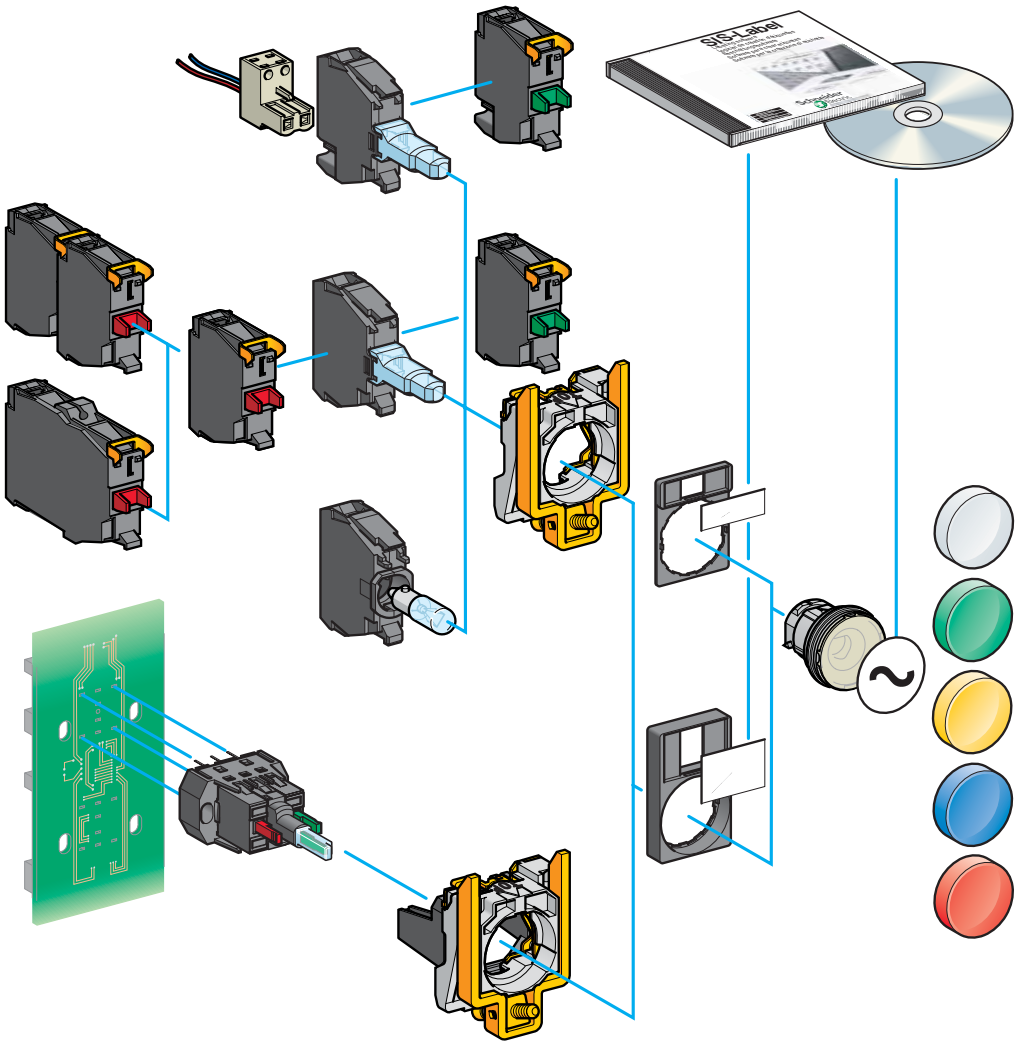


Pushbuttons and switches: body + head sub-assemblies



Pilot lights: body + head sub-assemblies

ZB component parts and accessories



Characteristics : pages 10 to 13
References : pages 16 to 59
Dimensions : pages 62 to 73

Pushbuttons, switches and pilot lights
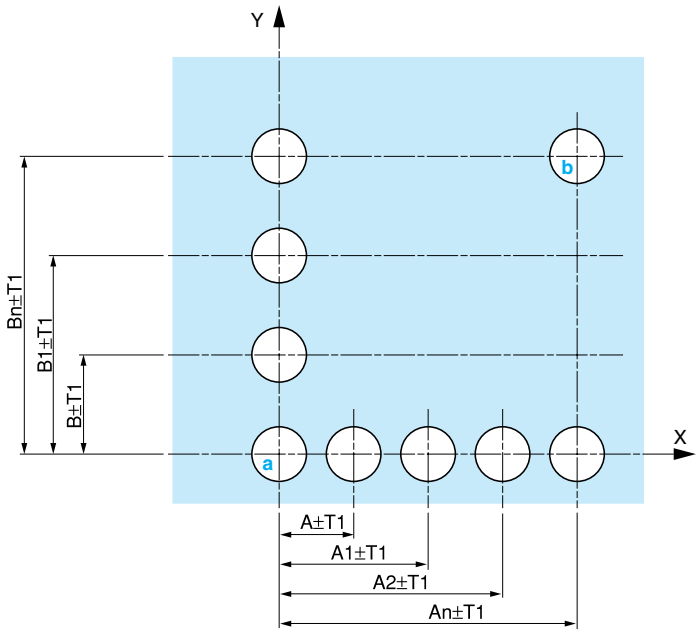
for printed circuit board connection

Pushbuttons, switches and pilot lights for printed circuit board connection

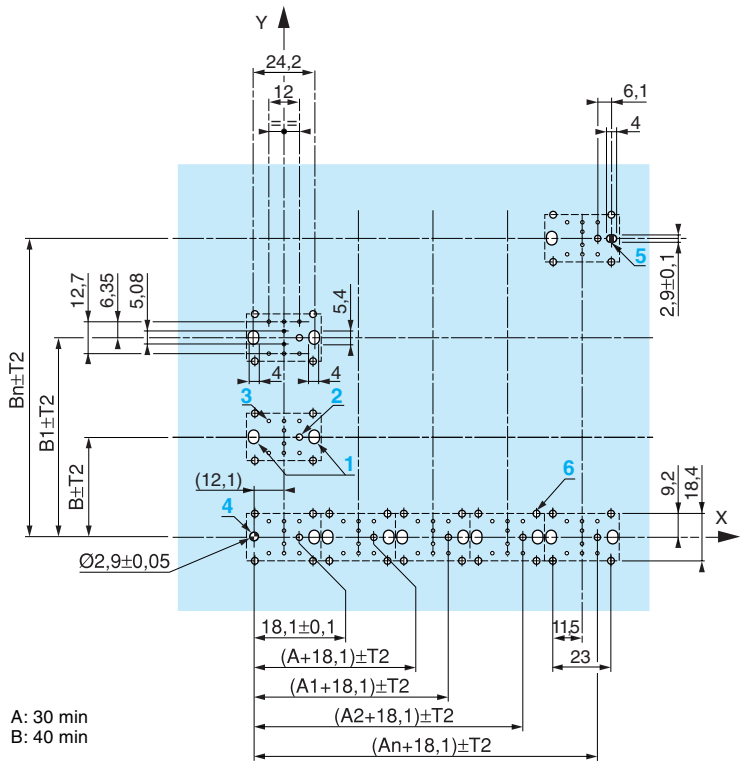
Panel cut-out (viewed from installer's side)

Dimensions in mm



Printed circuit board drillings (viewed from electrical block side)

Dimensions in mm

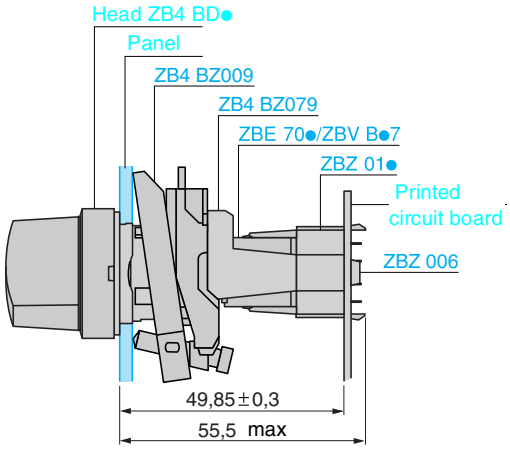


General tolerances of the panel and printed circuit board

The cumulative tolerance must not exceed 0.3 mm: T1 + T2 = 0.3 mm max.

■ Installation precautions:
□ Minimum thickness of circuit board: 1.6 mm.
□ Cut-out diameter: 22.4 mm ± 0.1 mm.
□ Orientation of body/fixing collar ZB4 BZ009: ± 2° 30' (excluding cut-outs marked a and b).
□ Tightening torque of screws ZBZ 006: 0.6 N.m. max.
□ Allow for one ZB4 BZ079 fixing collar/pillar and its fixing screws:
- every 90 mm horizontally (X), and 120 mm vertically (Y).
- with each selector switch head (ZB4 BD●, ZB4 BJ●, ZB4 BG●).

The fixing centres marked a and b are diagonally opposed and must align with those marked 4 and 5 on the printed circuit board.



■ **Mounting of adapter (socket) ZBZ 01● :**

1 2 elongated holes for ZBZ 006 screw access.

2 1 hole Ø 2.4 mm ± 0.05 for centring adapter ZBZ 01●.

3 8 x Ø 1.2 mm holes.

4 1 hole Ø 2.9 mm ± 0.05, for aligning the printed circuit board (with cut-out marked a).

5 1 elongated hole for aligning the printed circuit board (with cut-out marked b).

6 4 holes Ø 2.4 mm ± 0.05 for clipping in adapter ZBZ 01●.

Dimensions An + 18.1 relate to the Ø 2.4 mm ± 0.05 holes for centring adapter ZBZ 01●.

(1) The contact blocks enable variable composition of body/contact assemblies. Maximum number of rows possible: 3. Either 3 rows of 3 single contacts or 1 row of 3 double contacts + 1 row of 3 single contacts (double contacts occupy the first 2 rows).

*(2) To order products with screw clamp terminal connections for lugs, replace the **3** at the end of the reference with a **9**. Example: **ZBE 1013** becomes **ZBE 1019**.*

(3) It is not possible to fit an additional contact block on the back of these contact blocks.

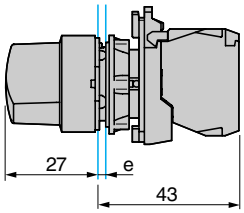
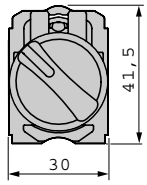
XB5 AK12●●5

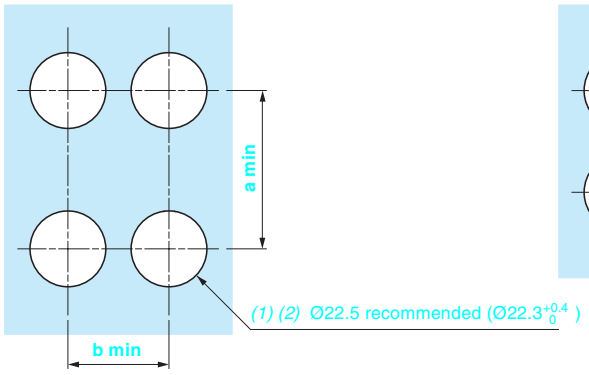


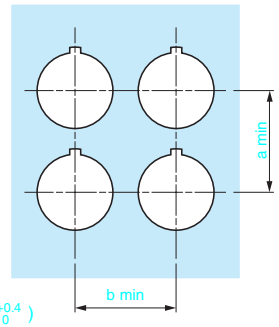


e: clamping thickness: 1 to 6 mm

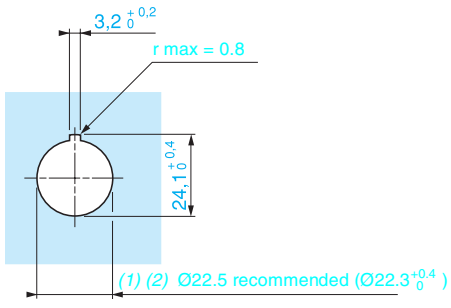
Panel cut-out for pushbuttons, switches and pilot lights (finished holes, ready for installation)

Connection by screw clamp terminals or plug-in connectors or on printed circuit board





Detail of lug recess



(1) Diameter on finished panel or support.
(2) For selector switches and Emergency stop buttons, use of an anti-rotation plate type ZB5 AZ902 is recommended, see page 136.

Connection	a	b
By screw clamp terminals or plug-in connector	40	30
By Faston connectors	45	32
On printed circuit board	30	30

General : pages 74 to 81
Characteristics : pages 82 to 85

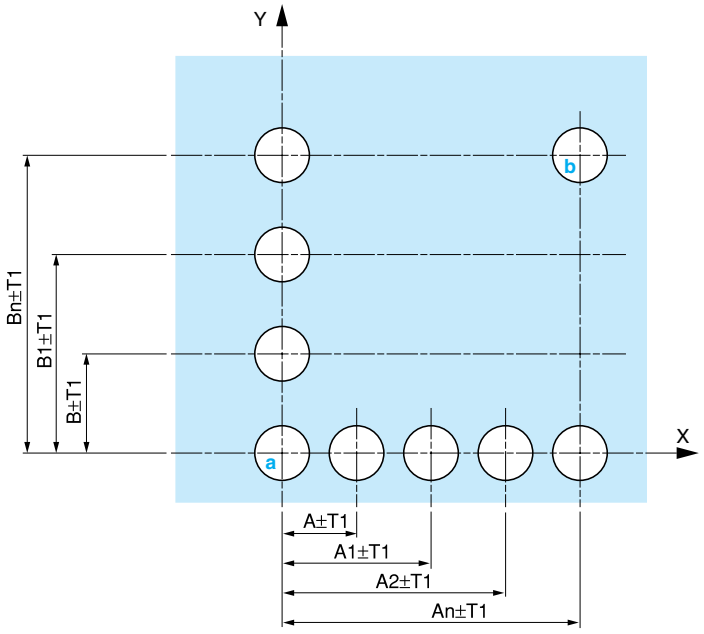
Pushbuttons, switches and pilot lights: for printed circuit board connection

Pushbuttons, switches and pilot lights for printed circuit board connection

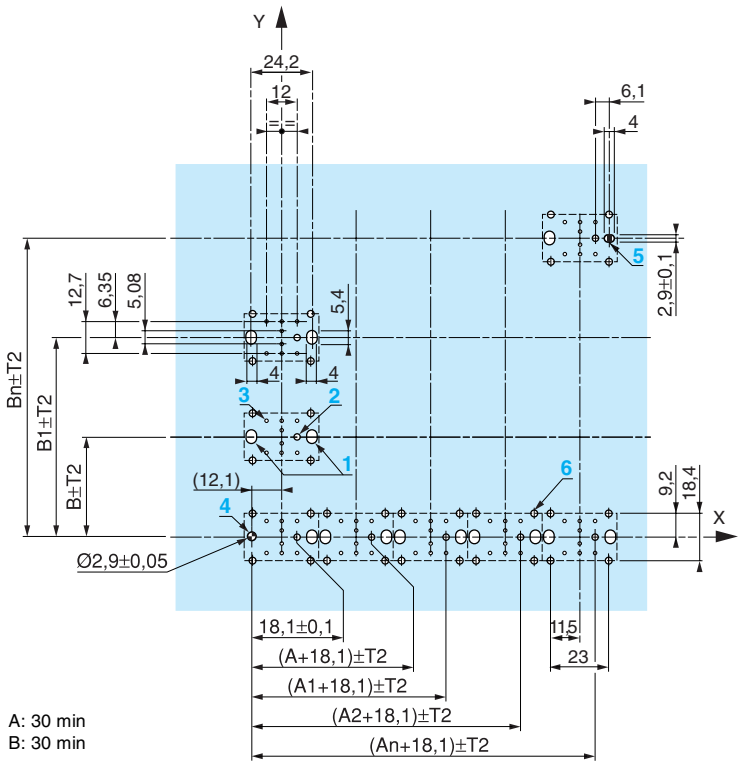
Panel cut-out (viewed from installer's side)

Dimensions in mm



Printed circuit board drillings (viewed from electrical block side)

Dimensions in mm

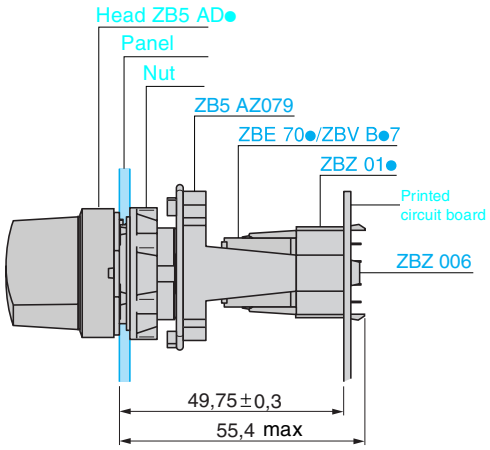


General tolerances of the panel and printed circuit board

The cumulative tolerance must not exceed 0.3 mm: T1 + T2 = 0.3 mm max.

■ Installation precautions:
□ Minimum thickness of circuit board: 1.6 mm.
□ Cut-out diameter: 22.4 mm ± 0.1 mm.
□ Orientation of body/fixing collar ZB5 BZ079: ± 2° 30' (excluding cut-outs marked a and b).
□ Tightening torque of screws ZBZ 006: 0.6 N.m. max.
□ Allow for one ZB5 BZ079 fixing collar/pillar and its fixing screws:
- every 90 mm horizontally (X), and 120 mm vertically (Y),
- with each selector switch head (ZB5 AD●, ZB5 AJ●, ZB5 AG●).

The fixing centres marked a and b are diagonally opposed and must align with those marked 4 and 5 on the printed circuit board.



■ Mounting of adapter (socket) ZBZ 01● :

1 2 elongated holes for ZBZ 006 screw access.

2 1 hole Ø 2.4 mm ± 0.05 for centring adapter ZBZ 01●.

3 8 x Ø 1.2 mm holes.

4 1 hole Ø 2.9 mm ± 0.05, for aligning the printed circuit board (with cut-out marked a).

5 1 elongated hole for aligning the printed circuit board (with cut-out marked b).

6 4 holes Ø 2.4 mm ± 0.05 for clipping in adapter ZBZ 01●.

Dimensions An + 18.1 relate to the Ø 2.4 mm ± 0.05 holes for centring adapter ZBZ 01●.

The efficiency of Telemecanique branded *solutions*

Used in combination, Telemecanique products provide quality solutions, meeting all your Automation & Control applications requirements.

A worldwide presence

Constantly available

- More than 5 000 points of sale in 130 countries.
- You can be sure to find the range of products that are right for you and which complies fully with the standards in the country where they are used.

Technical assistance wherever you are

- Our technicians are at your disposal to assist you in finding the optimum solution for your particular needs.
- Schneider Electric provides you with all necessary technical assistance, throughout the world.

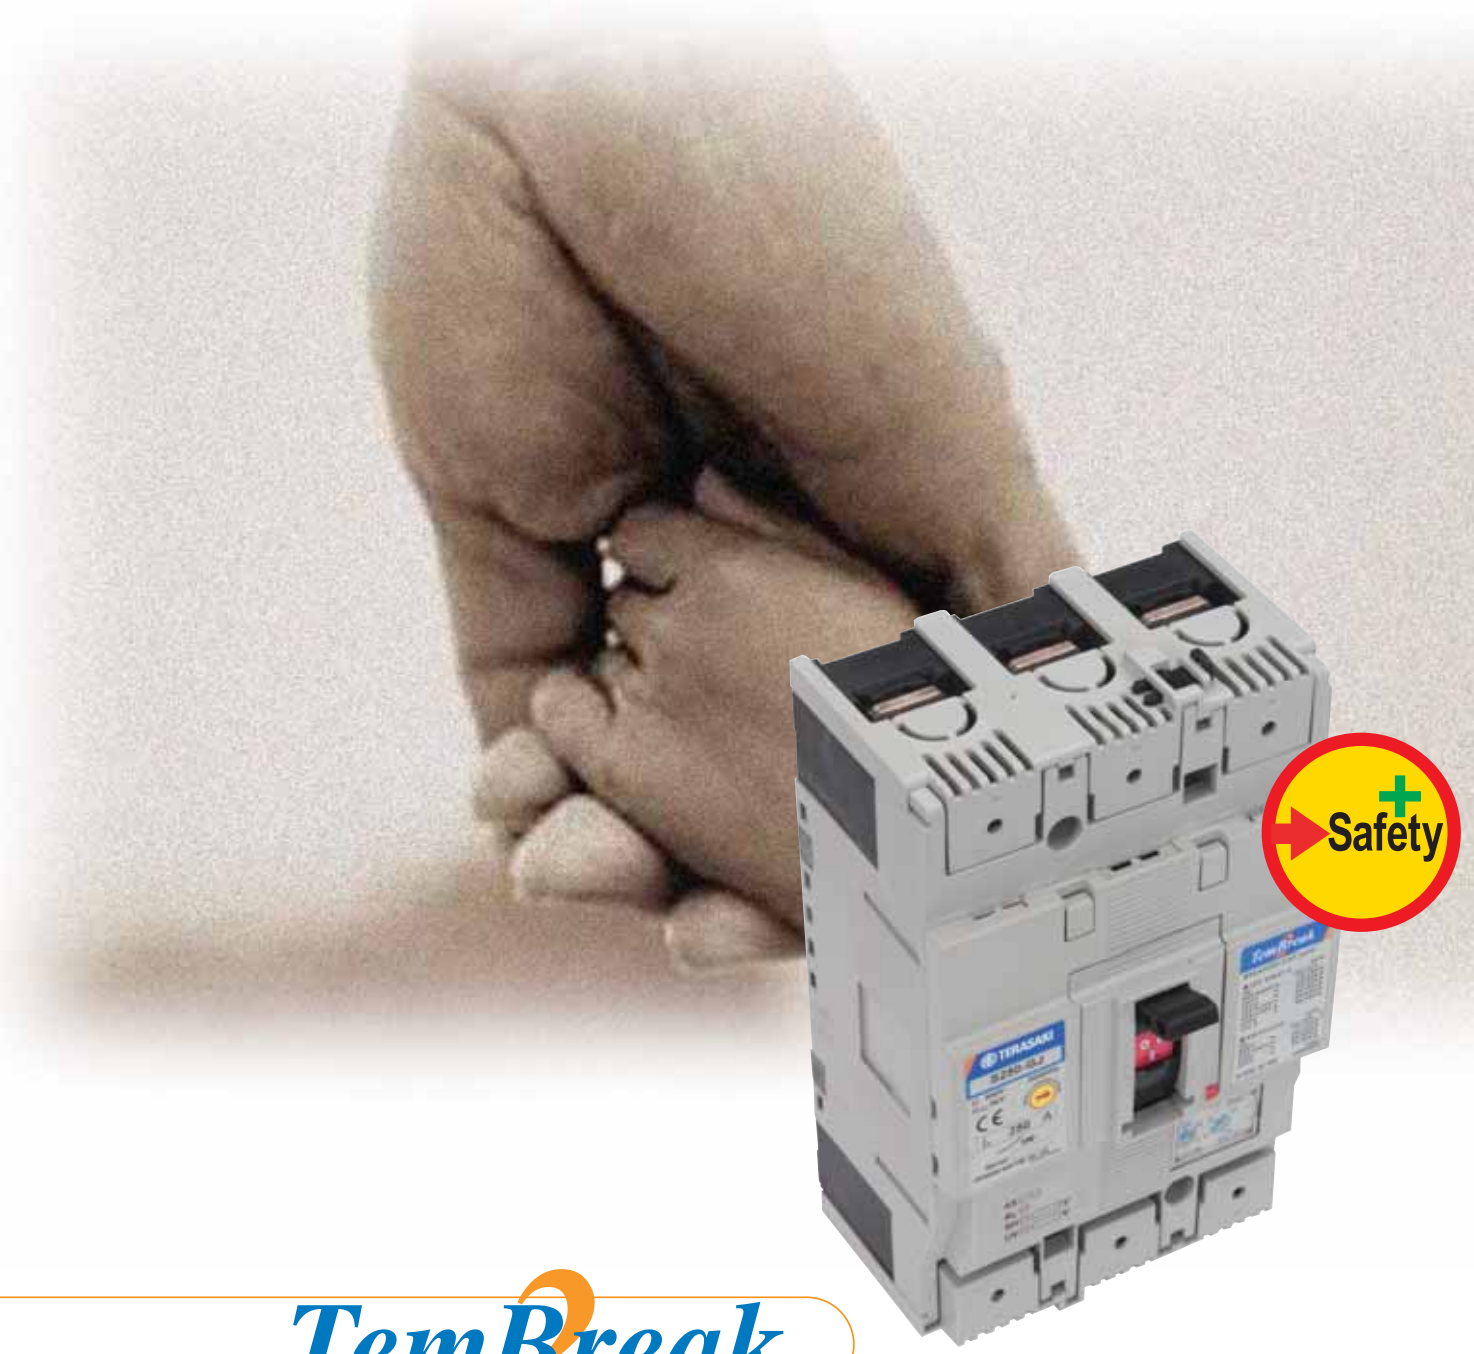
TERASAKI
Innovators in Protection Technology



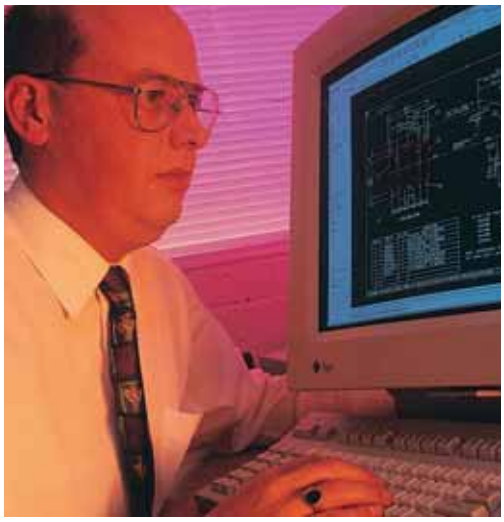
TemBreak2

The Ultimate Safety Breaker

OUR CUSTOMER CARE COMMITMENTS

Quality is Guaranteed

All products supplied from this catalogue carry a guarantee against defects in materials and workmanship for a period of 12 months from date of purchase as standard.



Quality is Accredited

Terasaki has ISO 9001 accreditation for the manufacture, sale and distribution of all products featured in this catalogue.

Ordering is Easy

We have made ordering easy for you by colour coding the sections of this catalogue and including order codes. If you need help with ordering or selection, please call one of the telephone numbers shown below.

Technical Support is Free

We offer free technical support and application software to all customers. This could range from selecting a product for an unusual application through to carrying out a protection study. Please call one of the telephone numbers shown below.

CUSTOMER SERVICE CONTACT DETAILS

Safety and protection are the prime purposes of Terasaki products. You care about safety and protection. The users of products you specify care about safety and protection.
We call TemBreak 2 the Ultimate Safety Breaker. Throughout this catalogue you will see our Safety+ mark. This is designed to draw your attention to safety features which exceed international standards.

Please read further to discover the benefits of TemBreak 2.

THE TEMBREAK 2 PRODUCT LINES

TEMBREAK 2

MOULDED CASE CIRCUIT BREAKERS

Rated current (I_n) from 20A to 630A. Breaking Capacity (I_{cu}) from 25kA to 200kA at 415V AC.

TEMBREAK 2

MINI MOULDED CASE CIRCUIT BREAKERS

Rated current (I_n) from 10A to 100A.
Breaking Capacity (I_{cu}) of 10kA at 415V AC.

TEMBREAK

MOULDED CASE CIRCUIT BREAKERS

Rated current (I_n) from 630A to 1600A. Breaking Capacity (I_{cu}) from 50kA to 125kA at 415V AC.

EASY SELECTION GUIDE

The TemBreak 2 range of products includes:

- Moulded Case Circuit Breakers (MCCBs)
- Switch-Disconnectors in the same compact moulded case frame sizes as MCCBs
- A comprehensive range of accessories which are common to MCCBs and Switch-Disconnectors. All internal accessories are common to all frame sizes.

Key to Model and Type Designations

Model Denoted by

Type Denoted by

E	Economical
S	Standard
H	High
L	Limiting*

C	Low breaking capacity

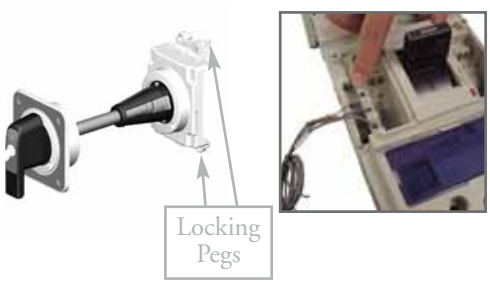
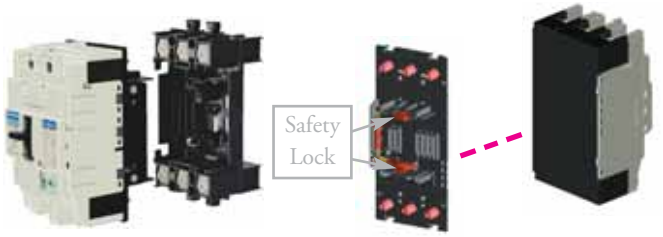
10 REASONS TO USE TEMBREAK 2

1. FIELD-INSTALLABLE ACCESSORIES



- Accessories can be fitted by the switchboard builder or added by the end-user. All internal accessories are common for TemBreak 2 MCCBs.
- Handles and motor operators can be rapidly fitted using the locking pegs. It takes **less than 10 seconds to secure a handle or motor** to the MCCB – a great time saving compared to alternative products.
- All accessories are endurance tested to the same level as the host MCCB.

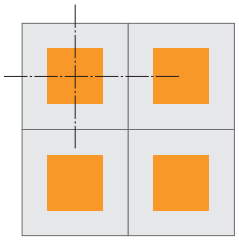
2. SAFETY LOCK FOR PLUG-IN VERSIONS



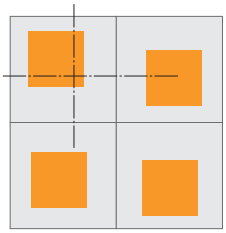
Plug-in MCCB and base *Plug-in connection kit, including safety lock*

The plug-in MCCB is locked to the base when the toggle is ON. It cannot be removed unless the toggle is OFF or TRIPPED. The safety lock prevents a trip occurring as the MCCB is being removed from the base.

3. SYMMETRICAL DOOR CUTOUT PATTERNS



Using TemBreak 2 Operating Handles



Using other MCCB Operating Handles

Door cutout patterns for handles are symmetrical, even when breakers are mounted in opposite directions.

4. MODULAR SIZES

All current ratings up to 630A can be supplied in **2 sizes:** the 250A and 630A sizes.

The compact 125A size offers **the same** features and performance but with reduced dimensions and cost.

5. ADVANCED L.C.D. DISPLAY, OCR

The XOW-1S OCR comes standard with the backlit LCD display. It can monitor and indicate phase currents, voltages, power, energy, power factor, harmonic currents, and more. Data communications via Modbus, an open network, are supported.

10 REASONS TO USE TEMBREAK 2

6. COMPACT CHANGEOVERS

Changeover Pair with Link Interlock and Motor Operators

Viewed from Below (250A frame)

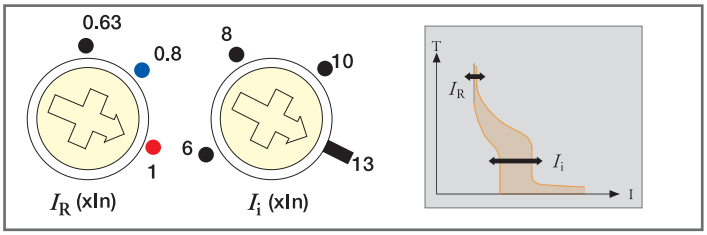
The mechanical interlock is installed on the front of the MCCB, and is compatible with motor operators and handles. An automatic changeover system can be assembled in a few minutes by a switchboard builder or end-user.

7. DIRECT OPENING

Under the heading "Measures to minimise the risk in the event of failure", IEC 60204-1 Safety of Machinery-Electrical Equipment of Machinery includes the following recommendation:

"-the use of switching devices having positive (or direct) opening operation."

8. UNSURPASSED FLEXIBILITY



Overload protection is adjustable between 63% and 100% of the rating.

Short-circuit protection is adjustable on all thermal magnetic models.

Short-circuit protection settings are suitable for motor starting on all models, including the compact 125A frame.

9. CUSTOMISED TRIPPING TIMES

If you require a characteristic which is not available as a preset on our electronic protection unit, send us the details and we will program a customised characteristic to suit your application. (Within certain limits - contact us for details).

10. VISUAL SAFETY

Coloured indicators display the ON or OFF status. The indicators are fully covered if the breaker trips, and black is the only visible colour.

WELCOME TO TEMBREAK 2

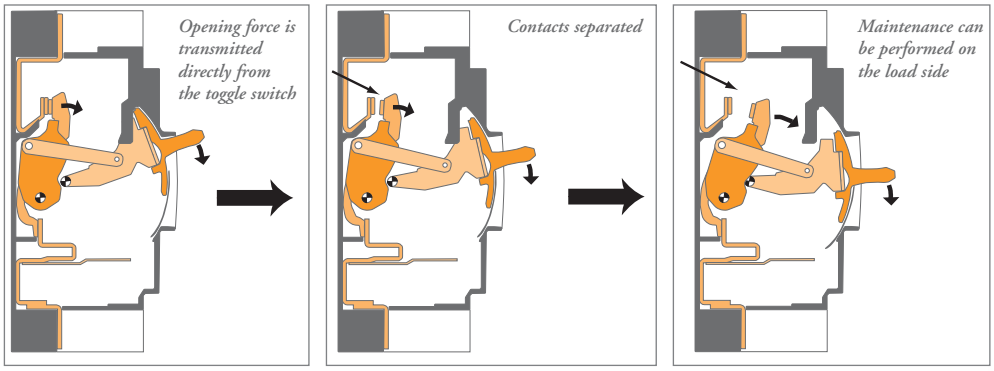
SAFETY PLUS

Terasaki have an innovative approach to product design. Our goal is to develop products which not only meet, but exceed recognised standards.

We use our knowledge of related applications to improve circuit breaker designs. For instance, when developing the Direct Opening Action, we applied ideas from a machinery safety standard to the design of the TemBreak 2 switching mechanism.

This proactive development policy confirms our reputation as Innovators in Protection Technology.

Machine Safety

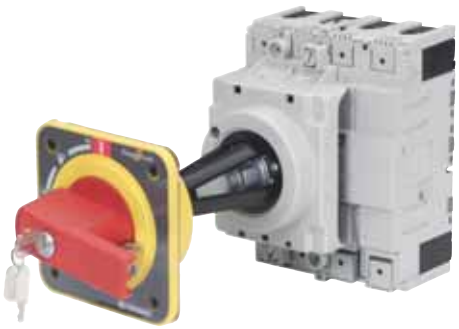


TemBreak 2 MCCBs are marked with IEC symbol indicating Direct Opening Action. ⊖

The robust mechanism ensures that the force you apply to the toggle is transmitted directly to the contacts.

Under the heading "Measures to minimise risk in the event of failure", IEC 60204-1 Safety of Machinery - Electrical Equipment of Machines includes the following recommendation:

" - the use of switching devices having positive (or direct) opening operation."



TemBreak 2 MCCBs help you to comply with the world's most stringent safety standards. It is one of the safest switching devices for machinery.

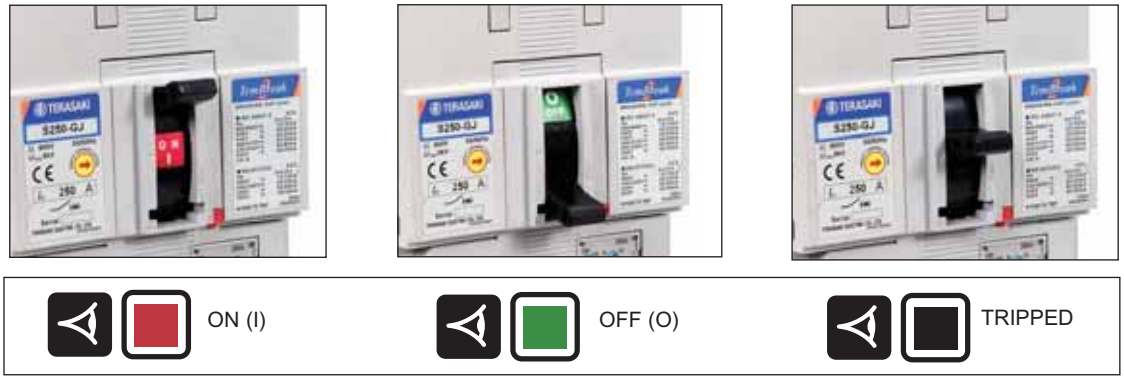
SAFETY PLUS

Visual Safety

You can easily see if a breaker is open, closed or tripped. **SAFETY+** coloured indicators boldly display the ON or OFF status. The indicators are fully covered if a breaker trips, and black is the only visible colour.

This is a ***unique*** safety feature. You can identify faulty circuits at a glance.

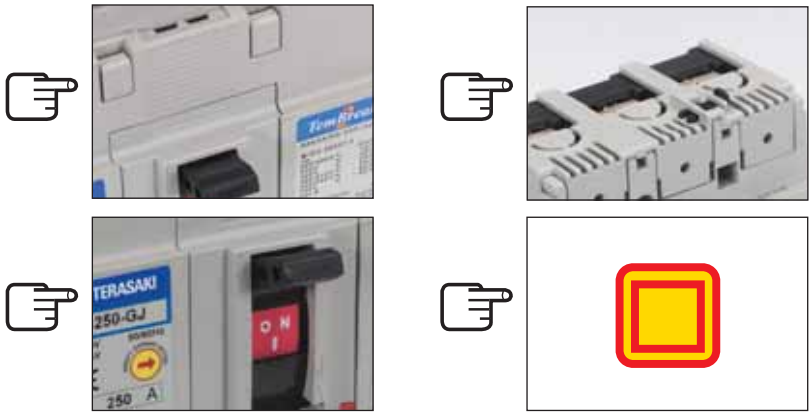
The toggle position always matches the position of the main contacts.



Touch Safety

The risk of touching live parts has been minimised by design.
These features reduce the risk of touching live parts:

- There are no exposed metal screws on the front face
- IP20 protection at the terminals
- IP30 protection at the toggle
- If the toggle is broken by accident or misuse, no live part is exposed
- No live parts are exposed when fitting accessories
- Double Insulation



WELCOME TO TEMBREAK 2

EXCEEDING STANDARDS

Safety Plus

TemBreak 2 MCCBs exceed the requirements of recognised standards.

International Compliance

- The TemBreak 2 MCCB complies with the international standard **IEC 60947-2**
- TemBreak 2 Switch Disconnectors comply with **IEC 60947-3**
- Accessories comply with **IEC 60947-5-1 or IEC 61058-1**
- The entire range conforms to the IEC general rules for switchgear, **IEC 60947-1**
- TemBreak 2 MCCBs comply with **JIS C 8201-2-1 Ann.1**
- The TemBreak 2 range complies with the EC Low Voltage Directive and all models are CE marked
- TemBreak 2 MCCBs carry the IEC symbol indicating Direct Opening Action as defined by **IEC 60947-5-1. IEC 60204-1, Safety of Machinery - Electrical Equipment of Machines** recommends that switches used for machinery have Direct Opening Action to minimise risk in the event of failure

Independent Tests

TemBreak 2 circuit breakers have been tested at independent laboratories as well as in Terasaki's own laboratory in Osaka, Japan. Copies of independent test reports are available on request.

Marine Approvals

TemBreak 2 MCCBs are approved by the leading marine approval organisations.

REDUCING ENVIRONMENTAL IMPACT

Longer Life Cycle

It makes good environmental sense to install a product with a long life expectancy. If you install a TemBreak 2 MCCB, you can expect it to stay in service for at least 30,000 mechanical operations (250A Frame). This is 22,000 more operations than recommended by IEC 60947-2, the international standard for circuit breakers.

If a system must be upgraded in future, we have made the following provisions for recycling:

1. The modular design of TemBreak 2 allows component parts and accessories to be easily disassembled and separately disposed of. Moulded parts do not contain any embedded metal parts.
2. Materials are clearly marked to allow future identification for easy recycling.

1

2

Uses Eco-friendly Materials

The following materials are used in most TemBreak 2 circuit breakers:

- Thermoplastic resin not containing PBBs or PBDEs
- Lead-free solder
- Cadmium-free contacts

Lighter and Smaller

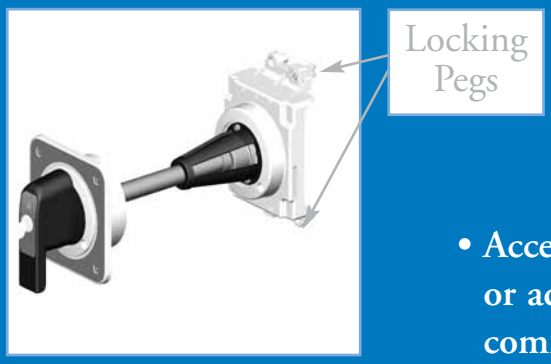
Components with low weight and volume make life easy for users, but high performance from smaller products also means less material used and less waste produced.

ISO 14001

Terasaki operate an Environmental Management System accredited to ISO 14001:1999. This requires us to monitor and measure the environmental performance of our activities, products and services in order to continually improve such performance.

Further information about this standard can be found on the internet at: www.tc207.org

FIELD-INSTALLABLE ACCESSORIES



- Accessories can be fitted by the switchboard builder or added by the end-user. All internal accessories are common for TemBreak 2 MCCBs.
- Handles and motor operators can be rapidly fitted using the locking pegs. It takes **less than 10 seconds to secure a handle or motor** to the MCCB – a great time saving compared to alternative products.
- All accessories are endurance tested to the same level as the host MCCB.

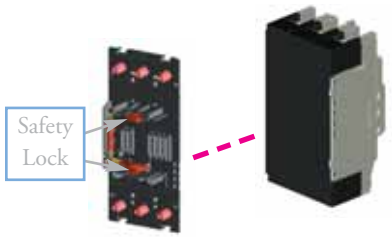
SAFETY LOCK FOR PLUG-IN VERSIONS

Plug-in MCCB and base



Plug-in connection kit, including safety lock

The plug-in MCCB is locked to the base when the toggle is ON. It cannot be removed unless the toggle is OFF or TRIPPED. The safety lock prevents a trip occurring as the MCCB is being removed from the base.

OPERATING CHARACTERISTICS

THERMAL MAGNETIC PROTECTION

TemBreak 2 MCCBs from 125A frame to 400A frame are available with thermal magnetic protection units. Refer to Section 9 for details of TemBreak thermal magnetic MCCBs up to 800A.

Thermal Magnetic trip units are especially suited to the following applications:

- Installations where harmonic distortion of current waveforms is likely. They operate inherently on the root mean square (rms) heating effect of current.
- DC circuits. Refer to Section 4, "The Application of MCCBs in DC Systems" for more information.

3 Pole MCCB with Adjustable Thermal and Adjustable Magnetic Characteristics

Single Pole MCCB with Fixed Characteristics

Models with Adjustable Thermal and Adjustable Magnetic Characteristics

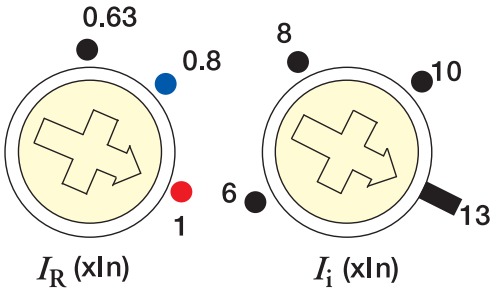
All standard 3 pole and 4 pole TemBreak 2 thermal magnetic models have adjustable thermal and adjustable magnetic characteristics.

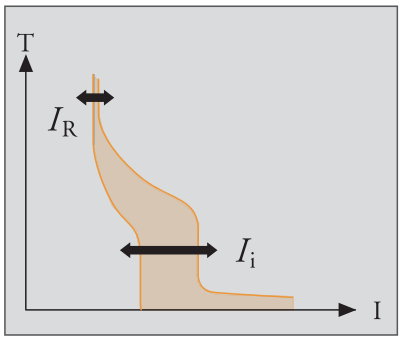
Traditionally, thermal magnetic MCCBs have had adjustable thermal with fixed magnetic characteristics. The fixed magnetic element can limit the application of the MCCB.

An adjustable magnetic characteristic allows short-circuit protection to be matched to the load and supply characteristics, for example motor inrush currents or generator short-circuit currents. Lowering the short-circuit tripping threshold can allow a higher earth-loop impedance in an installation and provide end-of-cable protection with the correct disconnection times.

THERMAL MAGNETIC PROTECTION

Adjustment Dials





1. I_R is the thermal element adjustment dial and is used to set the rated current to match the conductor rating.

   I_R can be set between 0.63 and 1.0 times I_n.

2. I_i is the magnetic element adjustment dial and is used to set the short circuit tripping threshold to suit the application.

   I_i can be set between 6 and 12 times I_n on 125A and 400A frame models.

   I_i can be set between 6 and 13 times I_n on 250A frame models with ratings of 160A, 200A and 250A.

   I_i can be set between 6 and 12 times I_n on 250A frame models with ratings of 125A and less.

THERMAL MAGNETIC PROTECTION

Single Pole MCCBs

Single pole models have fixed thermal and fixed magnetic characteristics.

Generator Protection

Generators may need specially modified protection characteristics, based on their short-circuit capability.

If a generator is capable of delivering short-circuit current greater than six times its full load current, a standard TemBreak 2 thermal magnetic MCCB may be used, with I_i set at less than the available short-circuit current. (Note that MCCBs, with fixed magnetic characteristics may not be suitable for this application.)

A thermal magnetic MCCB with low instantaneous protection may be used where the generator short-circuit current is less than six times its full load current. These are modified versions of the standard MCCB.

Four pole MCCBs with low instantaneous protection have protection on the neutral pole as standard. The magnetic characteristic of MCCBs with low instantaneous protection is fixed at the following values:

Model	Magnetic Trip Current
E125	$3xI_n$
S125	$3xI_n$
S160	$3xI_n$
E250	$3xI_n$
S250	$3xI_n$
E400	$3.5xI_n$
S400	$3.5xI_n$

Neutral Pole Protection

Neutral pole protection is available as an optional extra on four pole thermal magnetic MCCBs. The thermal and magnetic elements in the neutral pole are related to those in the phase poles as follows:

	Phase Trip Threshold	Neutral Trip Threshold
Thermal	I_r (adjustable)	I_N (adjustable)= I_n
Magnetic	I_i (adjustable)	I_i (adjustable)

Motor Protection

MCCBs feeding motors are often only required to provide protection from short-circuits. Overload protection is provided by a dedicated thermal or electronic overload relay. Tembreak 2 MCCBs without thermal protection elements are available for this application. Four pole MCCBs with magnetic trip only have protection on the neutral pole as standard.

ELECTRONIC PROTECTION (STANDARD TYPE)

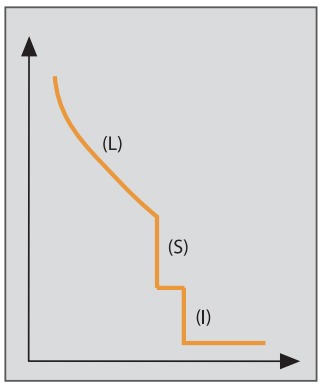
TemBreak 2 MCCBs from 250A frame to 630A frame are available with electronic protection units. Current ratings, I_n, of 40A, 125A, 160A, 250A, 400A and 630A are available. These offer great flexibility as their characteristics can be set to suit a wide range of application conditions. Overload protection can be set between 0.4 and 1.0 times I_n.

Terasaki offer one of the most adaptable protection units on the market:

If you require a characteristic which is not available as a preset on our standard electronic protection unit, send us the details and we will program a customised characteristic to your specification.*

Selecting a Preset Characteristic for a 400A TemBreak 2 MCCB with Electronic Protection

Every TemBreak 2 electronic protection unit includes overload protection (L), delayed short-circuit protection (S) and instantaneous protection (I) as standard.



Electronic Protection Characteristic

*Characteristic is programmable within certain limits. Contact us for details.

ELECTRONIC PROTECTION (STANDARD TYPE)

Optional Functions

Three optional functions are available:

Ground Fault Trip (G)

This function trips the MCCB after time delay, t_g, if the ground fault current exceeds the preset threshold, I_g. Ground fault protection can be enabled and disabled by operating a DIP switch on the electronic protection unit. An external current transformer is available if the ground fault trip function is required on a 3 pole MCCB, in a 3 phase, 4 wire system.

Neutral Protection (N)

Neutral protection trips the MCCB after time delay, t_N, if current in the neutral conductor exceeds the rated current, I_n, of the MCCB. The time delay characteristic is identical to that of the overload characteristic (L).

Preferential Trip Alarm (P)

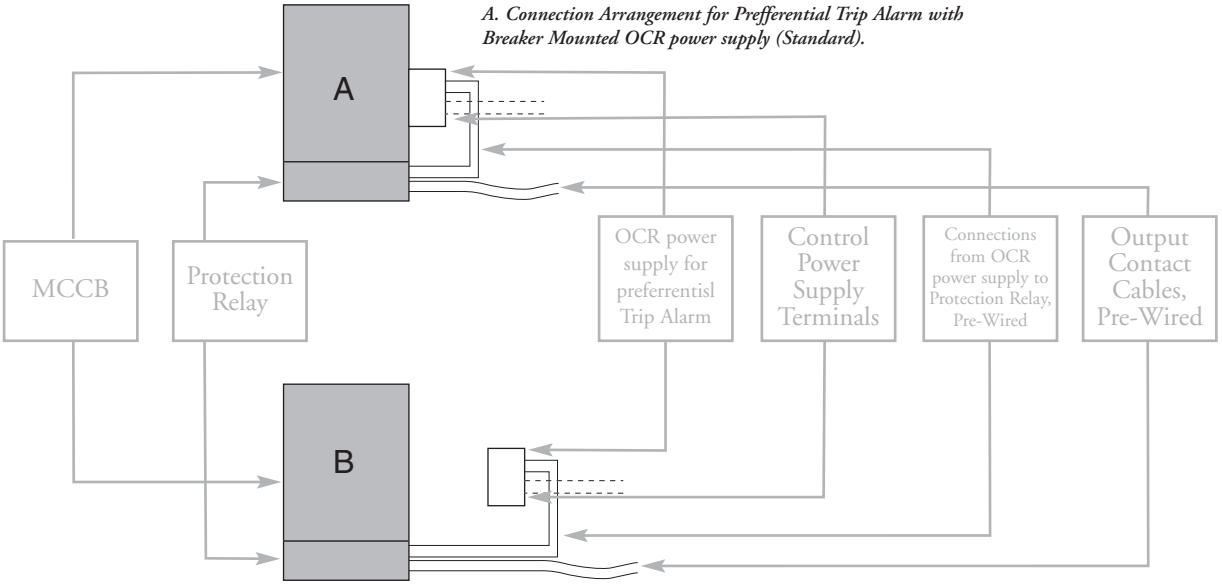
An LED and volt-free output contact are activated after a time delay, t_p, if the load current exceeds the preset threshold, I_p.

An OCR power supply is required for operation of the preferential trip alarm. This is mounted as shown below, either on the side of the breaker (250A, 400A, 630A – standard), or remotely (400A, 630A only – on request). Ratings, specifications and wiring arrangements are shown below. Dimensions of the OCR power supply for preferential trip alarm can be found in Section 7. Note that the breaker mounted terminal block is not compatible with the OCR power supply for Front-Connected and Rear-Connected MCCBs described in Section 5, if the OCR power supply is mounted on the right side of the breaker.

Control Power Supply Specifications		
Frame (A)	250	400/630
Voltage	200-240V AC	200-240V AC
Rated Power	2VA	2VA

Rated Current of Output Contact		
Frame (A)	250	400/630
125V AC, resistive load	3A	3A
125V AC, inductive load	2A	2A
250V AC, resistive load	3A	3A
250V AC, inductive load	2A	2A
30V DC, resistive load	2A	2A
30V DC, inductive load	2A	2A

ELECTRONIC PROTECTION (STANDARD TYPE)



A. Connection Arrangement for Prefferential Trip Alarm with Breaker Mounted OCR power supply (Standard).

B. Connection Arrangement for Prefferential Trip Alarm with Remotely Mounted OCR power supply (On Request).

How to Specify Optional Functions

Optional functions must be specified at the time of order. Descriptions for electronic MCCBs include a 1-4 digit alphabetic code after the type designation which details the combination of optional functions. For example:

S400-GE **APG** 3P 400A FC - includes preferential trip and ground fault trip.

The table below lists codes for all the optional functions currently available:

		Optional Function			
I_n	Poles	Code	Ground Fault (G)	Neutral Protection (N)	Preferential Trip Alarm (P)
250	3	AP	-	-	■
	4	AP	-	-	■
		AN	-	■	-
		APN	-	■	■
400	3	AP	-	-	■
		AG	■	-	-
		APG	■	-	■
	4	AP	-	-	■
		AN	-	■	-
		APN	-	■	■

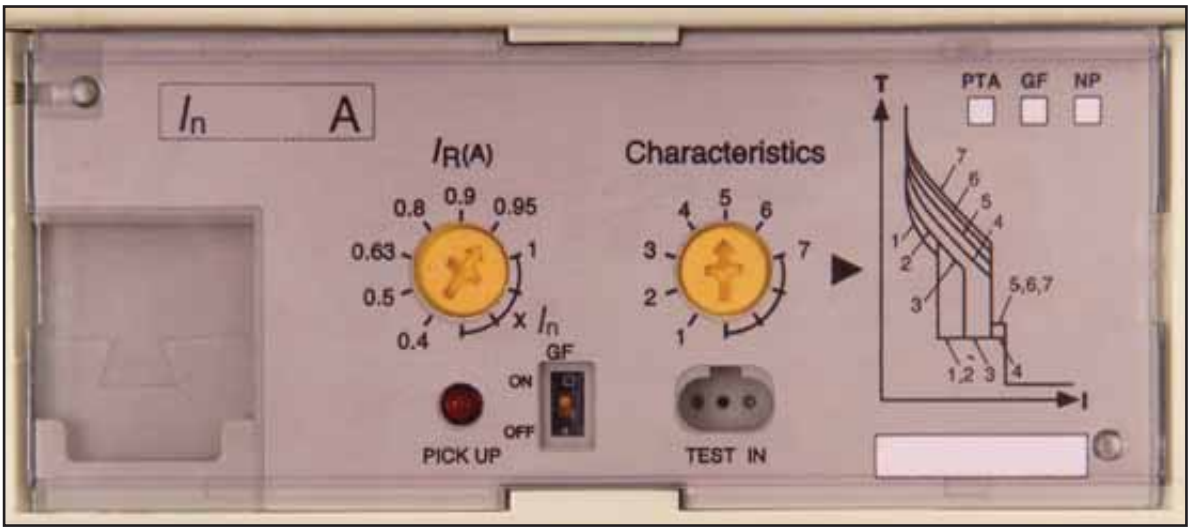
		AN	-	■	-
		APN	-	■	■
		AGN	■	■	-
		APGN	■	■	■

■ Available - Not Available

ELECTRONIC PROTECTION (STANDARD TYPE)

Adjustment Dials



The left adjustment dial sets the rated current to match the conductor rating. The right adjustment dial selects one of seven preset characteristics on 250A and 400A models, and one of six preset characteristics on 630A models. The effects of the left adjustment dial (labelled I_R(A)), and the right adjustment dial (labelled Characteristics) are detailed in the tables shown underneath each time / current graph.

Tolerances of Characteristics

Characteristics		Tolerance
Long Time Delay	t_R	± 20%
Short Time Delay	I_{sd}	± 15%
	t_{sd}	Total clearing time +50ms, resettable time -20ms
Instantaneous	I_i	± 20%
Preferential Trip Alarm	I_p	± 10%
	t_p	± 10%
Ground Fault Trip	I_g	± 15%
	t_g	Total clearing time +50ms, resettable time -20ms
Neutral Protection	I_N	± 15%

(3) When you specify GF on MCCBs with 3 poles the terminal block is automatically fitted to connect with the external neutral CT for 3 phases 4 wires system. See terminal blocks in section 7.

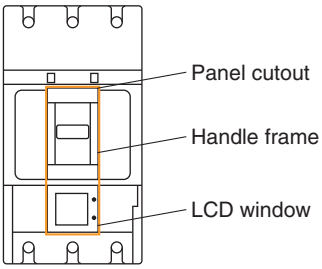
ELECTRONIC PROTECTION (WITH LCD)

Appearance

The TemBreak2 enhanced electronic breaker with integrated VT and CT monitors the current, voltage, instantaneous electrical power, integrated electrical energy and power factor of a circuit and displays their values on the LCD on the front of the breaker. This breaker using the Modbus protocol allows data such as measured values and event/fault logs to be transmitted to an external device.

- The LCD window provides the phase currents, line voltages (and their maximum values), power factor, electrical power and electrical energy. It can also provide the 1st to 19th harmonic currents for each phase.

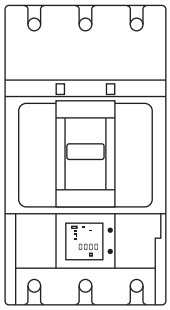
- When a fault occurs, the cause of the fault and the fault current are indicated on the LCD. Data in memory is stored even if the power is lost. You can view event or fault logs after the power is restored.

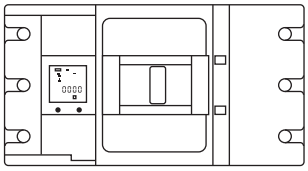


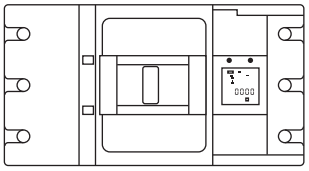
The LCD window is equal to the handle frame in width; the panel cutout can be made easily.

ELECTRONIC PROTECTION (WITH LCD)

● The breaker is available in three LCD orientations corresponding to the installation orientations of the breaker.

Vertical (move the handle up to ON) (Standard orientation)	Horizontal (move the handle right to ON)	Horizontal (move the handle left to ON)
		






If the breaker is installed in a horizontal orientation, please specify "Horizontal (move the handle right to ON)" or "Horizontal (move the handle left to ON)" when ordering. Otherwise the standard orientation "Vertical (move the handle up to ON)" will apply.

OCR Power Supply for Electronic Protection with LCD

The XOW OCR, protection relays, requires control power.
The OCR power supply is installed on the right side of the breaker as standard. This can also be installed separately to the breaker. Please specify when ordering.

Note ①: When the OCR power supply is installed on the right side of the breaker, the breaker cannot be equipped with a terminal block for connection to the shunt trip device and under voltage trip device.

● Specifications of OCR power supply

Control voltage Note ② (Rated voltage)	100 – 120 VAC or 200 – 240 VAC
Current consumption	2VA

Note ②: The permissible range of the control voltage is 85 to 110% of the rated voltage.
Please specify the rated voltage when ordering.

Dimensions of the OCR power supply can be found in Section 7.

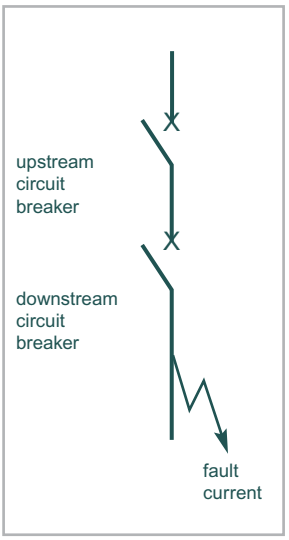
DISCRIMINATION

WHAT IS DISCRIMINATION?

Discrimination, also called selectivity, is the co-ordination of protective devices such that a fault is cleared by the protective device installed immediately upstream of the fault, and by that device alone.



Total discrimination

Discrimination is said to be total if the downstream circuit breaker opens and the upstream circuit breaker remains closed. This ensures maximum availability of the system.

Partial discrimination

Discrimination is partial if the above condition is not fulfiled up to the prospective short-circuit current, but to a lesser value, termed the selectivity limit current (I_s).

Above this value both circuit breakers could open, resulting in loss of selectivity.

HOW TO READ THE DISCRIMINATION TABLES

Boxes containing the letter "T" indicate total discrimination between the relevant upstream and downstream circuit-breakers. Total discrimination applies for all fault levels up to the breaking capacity of the upstream or the downstream circuit breaker, whichever is the lesser.

For the other boxes, discrimination is either partial or there is no discrimination.

If discrimination is partial then the value of the selectivity limit current, I_s, is shown in the box.

Worked Examples

Q (1) A main switchboard requires a 1600A ACB feeding a 400A MCCB. The fault level is 65kA. What combination of protective devices would provide total discrimination?

A (1) A TemPower2 ACB AR216S feeding a TemBreak2 S400-GJ would provide total discrimination up to 65kA. See page 57

Note: Discrimination would be total whether the TemPower 2 ACB had an integral or external protection relay because I_{cw} (I_s) = I_{cs}.

Most other ACBs have I_{cw} (I_s) <I_{cs}.

HOW TO READ THE DISCRIMINATION TABLES

Q (2) A Sub distribution board requires a 630A MCCB feeding a 250A MCCB. The fault level is 65kA. What combination of protective devices would provide total discrimination?

A (2) Using a TemBreak 2 S630-GE MCCB feeding a TemBreak 2 S250-GJ would provide total discrimination up to 65kA. See page 59

Q (3) A final distribution board contains a 125A MCCB incomer feeding a 32A Type B MCB. Is discrimination between these devices possible?

A (3) A TemBreak 2 MCCB type S160-NJ/125A feeding a TemDin 2 MCB would provide total discrimination. See page 58

Alternatively **ANY OTHER** MCB can be used provided it has energy limiting ability of class 3 in accordance with EN 60898.

3. All values shown at 400V AC.
4. I_s expressed in kA.

WHAT IS CASCADING?

Cascading is a technique where the current limiting capability of upstream circuit breakers is used to permit the installation of lower rated and therefore lower cost circuit breakers downstream.

The upstream TemBreak 2 circuit breaker acts as a resistance against short-circuit currents. With this assistance, downstream circuit breakers with breaking capacities lower than the prospective short-circuit at their point of installation can interrupt the reduced short-circuit current.

Since the current is limited downstream of the limiting circuit breaker, cascading applies to all switchgear in the downstream circuit. It is not restricted to two consecutive devices.

Cascading is recognised by the following standards related to electrical installations:

IEC 60364

BS 7671

AS/NZS 3000

The Advantages

Installation of a single limiting circuit-breaker results in considerable simplifications and savings for the entire downstream installation:

- Simplification of selection of devices using the cascading tables
- Savings on downstream devices. Cascading allows circuit-breakers with lower ratings to be used.

In addition the application of cascading will reduce both electrodynamic and thermal stress within the installation.

HOW TO READ THE CASCADE TABLES

The value shown in the table is the increased breaking capacity, expressed in kA, that can be achieved if the downstream MCCB is backed up by the appropriate upstream MCCB.

Worked Examples:

Q (1) A 36kA panelboard is required with a 400A incomer and 125A outgoing MCCBs. Can cascading be applied?

A (1) A cost effective solution would be to use an S400-CJ incomer rated at 36kA and E125-NJ MCCBs rated at 25kA downstream.

The upstream S400-CJ MCCB would back up the downstream E125-NJ to 36kA. If this was an 8 Way panelboard you have managed to save cost by installing eight 25kA MCCBs rather than eight 36kA MCCBs.

Q (2) If the same 8 way panelboard was to be used in an 80kA installation, what MCCBs could be used?

A (2) You could still use the E125-NJ provided it was backed up by an L400-NE. The Current limiting capacity of the 400A MCCB would back up the E125A from 25kA to 85kA.

The Application of MCCBs in DC Systems

Terasaki's MCCBs provide an excellent range of protection for DC installations. We offer MCCBs of up to 1000A with DC overload protection and up to 2500A with DC short-circuit protection.

Protection Method

Current transformers require alternating current to generate magnetic flux thereby inducing current to flow in the secondary winding. Any device which relies on current transformers for measurement or detection of current is therefore unsuitable for protection of DC systems. Most electronic MCCBs fall into this category.

The most common method of detecting DC overloads is by the use of a thermal element. Short-circuit protection in DC circuits is provided by electromagnetic tripping elements.

Tripping Characteristics

The time-current characteristics of a thermal element, such as those published in Section 3, are unaffected by the frequency of current applied. They hold good for both AC and DC currents.

A magnetic element operates on the instantaneous value of the current waveform. This means that in practice in an AC circuit, it will operate at the peak value of the sinusoidal waveform. Tripping characteristics are published in AC root mean square (rms) Amperes (A). This means that the value of AC instantaneous current, I_p, which will operate the element is equal to the rms current multiplied by $\sqrt{2}$. Similarly, the value of DC instantaneous current which will operate the element is equal to the AC rms current multiplied by $\sqrt{2}$.

DC operating current of magnetic element = $\sqrt{2}$ x AC rms operating current of magnetic element.

Time Constant

Time constants associated with DC circuits prevent the voltage of the circuit from reacting immediately when a load current is suddenly interrupted.

The time constant, τ, of a circuit indicates how quickly voltage across capacitors and current through inductors react to transient conditions.

The time constant of a capacitive circuit is the product of capacitance and resistance:
$\tau = RC$ (s).
The time constant of an inductive circuit is given by:
$\tau = L/R$ (s).

The Application of MCCBs in DC Systems

Time Constant

Transient voltages and currents, including those produced by switching, do not approximate their steady state values until 5 time constants have elapsed.

Fault currents occurring in circuits with high time constants are extremely difficult to interrupt due to the lagging voltage. All DC breaking capacities in this section are shown with the assumption that the time constant of the circuit is restricted to the values shown below.

Fault Level	τ
Near the rated current, I_n, of the circuit breaker	<2.0ms
<2.5 x I_n	<2.5ms
<10kA	<7ms
>10kA	<15ms

Breaking Capacity

The short-circuit ratings of MCCBs suitable for DC installations are shown in the table below. In some cases, two or more poles must be connected in series to achieve the given rating, this is also indicated in the table.

DC Breaking Capacity, Icu (kA), Protection and Reference								
Voltage	250V DC	350V DC	500V DC		600V DC		Protection	
Poles in Series	2	3	3	4	3	4	Overload	Short Circuit

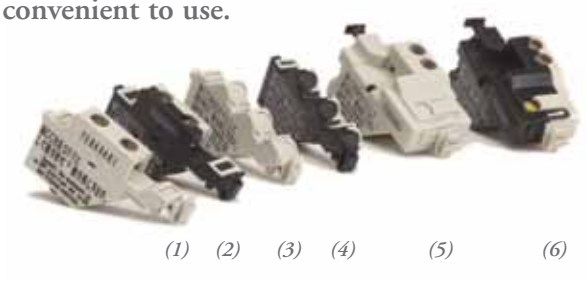
ELECTRICAL CONTROL USING INTERNALLY MOUNTED ACCESSORIES

Electrical control accessories for TemBreak 2 are designed with the installer in mind. Status and alarm contacts, remote tripping coils and undervoltage
protection coils are of modular design and convenient to use.



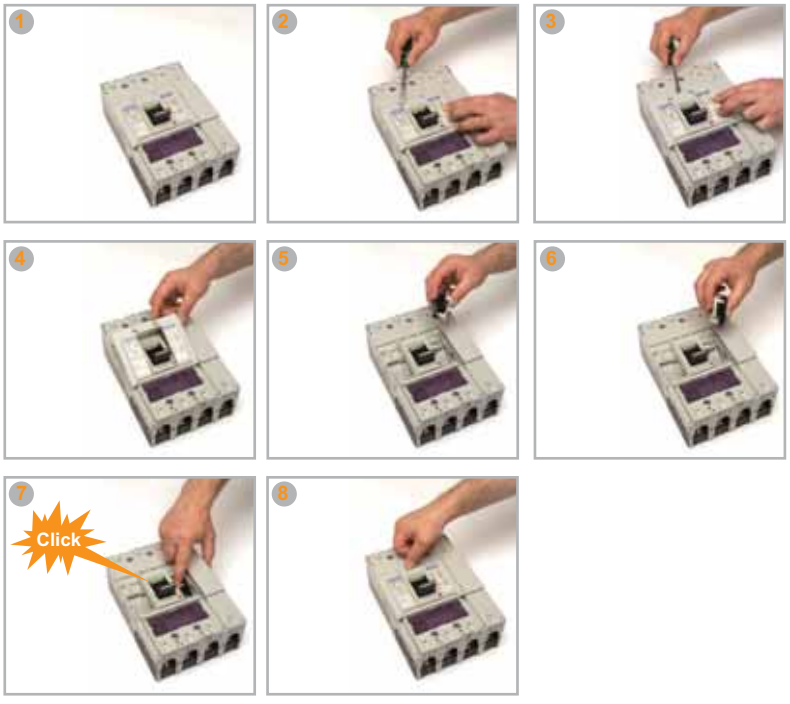
(1) (2) (3) (4) (5) (6)

1) Heavy-duty auxiliary switch
2) Heavy-duty alarm switch
3) General-purpose auxiliary switch
4) General-purpose alarm switch
5) Shunt trip
6) Undervoltage trip

- Every accessory fits every MCCB and Switch-Disconnector in the range.
- All accessories are endurance tested to the same level as MCCBs.
- TemBreak 2 internal accessories are easily **field-installable.**
- All accessories are individually packaged and are supplied with fitting instructions.
- Control wiring is terminated on the accessory screw terminal. Alternatively a terminal block which clips to the side of the MCCB is available.

Installing Accessories in a 4 pole S400 model

The internal accessories can be easily installed in the field without special tools or product training.

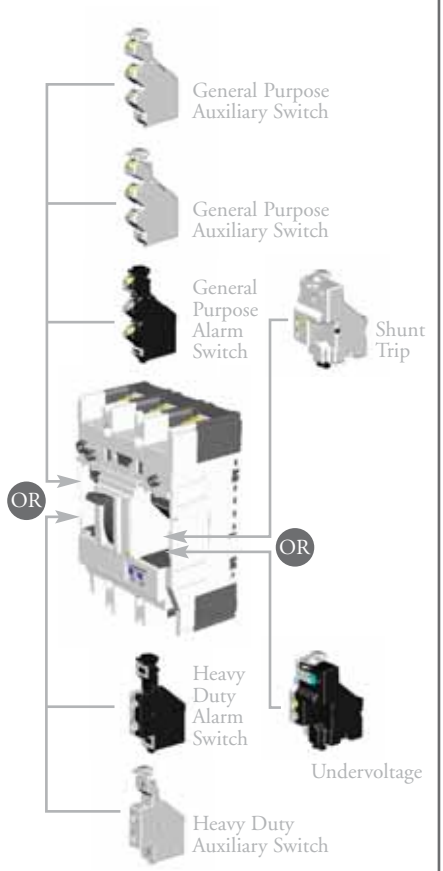


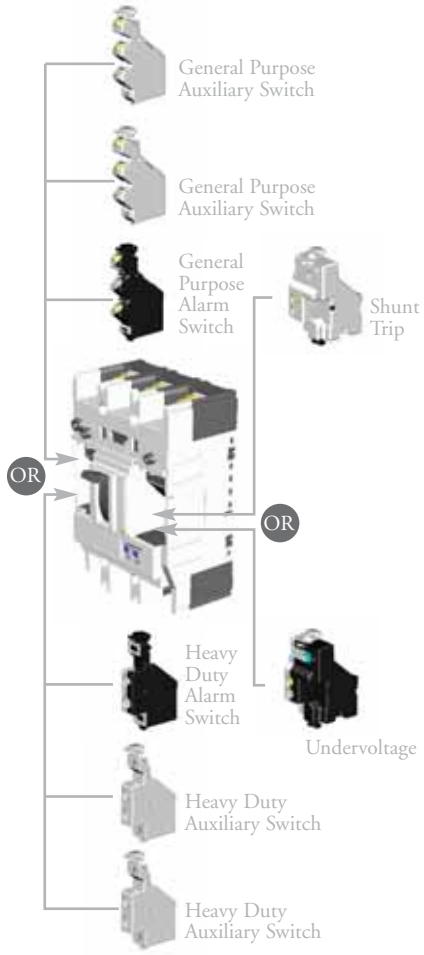
Easy field-Installation of Accessories

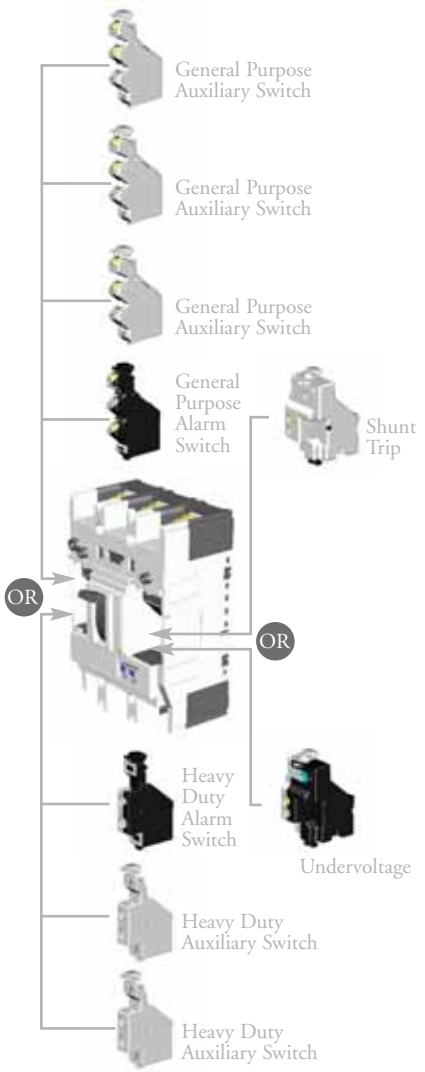
- Internal accessory can be simply plugged into position
- No tools are required for this, except a screwdriver to lift the MCCB front cover clips.
- Accessories fit with a firm click when installed correctly.
- Colour coding of accessories helps identification and installation

ELECTRICAL CONTROL USING INTERNALLY MOUNTED ACCESSORIES

Valid Maximum Accessory Combinations

Frame size (A): 125	160 and 250	400 and 630
		




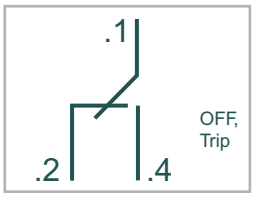


- Status indication switches mount in the left side of the MCCB.
  General purpose and heavy duty status indication switches cannot be mixed in the same MCCB.
  Only one alarm switch can be fitted to an MCCB.
- Shunt trips and undervoltage trips mount in the right side of the MCCB.
- It is not possible to install a shunt trip and an undervoltage trip in an MCCB as they occupy the same location. Undervoltage trips can provide remote tripping if necessary by wiring a normally closed contact or pushbutton in series with the protected supply.
- Undervoltage trips with time delays require an external time delay controller which clips to the side of the MCCB.

ELECTRICAL CONTROL USING INTERNALLY MOUNTED ACCESSORIES

Status Indication Switches

General Purpose Auxiliary Switch



Terminal Designations and Function of General Purpose Auxiliary Switch

General Purpose Auxiliary Switch (AX)

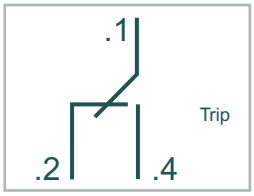
An auxiliary switch electrically indicates the ON or OFF status of the MCCB. The general purpose type is a changeover switch with 3 terminals.

A microcurrent version is available for switching currents as low as 1mA.

Auxiliary switches are colour coded grey. The cable capacity of the terminals is 0.5 to 1.25mm^2.

The general purpose auxiliary switch meets the requirements of IEC 61058-1.

General Purpose Alarm Switch



Terminal Designations and Function of General Purpose Alarm Switch

General Purpose Alarm Switch (AL)

An alarm switch electrically indicates the TRIP status of the MCCB. The general purpose type is a changeover switch with 3 terminals.

A microcurrent version is available for switching currents as low as 1mA.

Alarm switches are colour coded grey and black. The cable capacity of the terminals is 0.5 to 1.25mm^2.

The general purpose alarm switch meets the requirements of IEC 61058-1.

General purpose auxiliaries and alarm switch ratings

Volts (V)	AC Amperes (A)		Volts (V)	DC Amperes (A)		Minimum Load
	Resistive Load	Inductive Load		Resistive Load	Inductive Load	
440	-	-	250	-	-	100mA at
240	3	2	125	0.4	0.05	15V DC.
110	3	2	30	3	2	

Microcurrent versions

DC Volts (V)	DC Amperes (A) Resistive Load	Minimum Load
30	0.1	1mA at 5V DC and 30V DC.

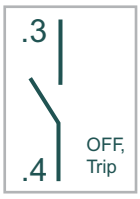
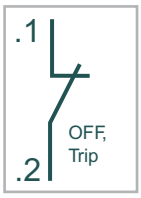
Status Indication Switches

Heavy Duty Auxiliary Switch

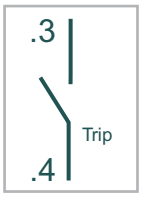


Terminal Designations and Function of Heavy Duty Auxiliary Switch, a contact

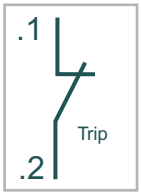


Terminal Designations and Function of Heavy Duty Auxiliary Switch, b contact

Heavy Duty Alarm Switch



Terminal Designations and Function of Heavy Duty Alarm Switch, a contact



Terminal Designations and Function of Heavy Duty Alarm Switch, b contact

Ratings of Heavy Duty Auxiliary and Alarm Switches					
AC			DC		
Volts (V)	Amperes (A)		Volts (V)	Amperes (A)	
	Resistive Load	Inductive Load		Resistive Load	Inductive Load
500	1	1	-		
440	3	3	250	0.5	0.5
240	4	4	125	1	1
110	5	5	48	3	2.5
48	6	6	24	6	2.5

Heavy Duty Auxiliary Switch (AX)

The heavy duty auxiliary switch has an impulse withstand voltage (Uimp) of 6kV and is suitable for isolating safety circuits. The auxiliary switch electrically indicates the ON or OFF status of the MCCB. The heavy duty type is a bridge switch with two terminals. It is available in either normally open or normally closed configurations.

Heavy duty auxiliary switches are colour coded grey. The cable capacity of the terminals is 1.25 to 2.5mm^2.

The heavy duty auxiliary switch meets the requirements of IEC 60947-5-1.

It has direct opening action, recommended by IEC 60204-1 Safety of Machinery - Electrical Equipment for Machines.

Heavy Duty Alarm Switch (AL)

The heavy duty alarm switch has an impulse withstand voltage (Uimp) of 6kV and is suitable for isolating control circuits. The alarm switch electrically indicates the TRIP status of the MCCB. The heavy duty type is a bridge switch with two terminals. It is available in either normally open or normally closed configurations.

Heavy duty auxiliary switches are colour coded grey and black. The cable capacity of the terminals is 1.25 to 2.5mm^2.

The heavy duty alarm switch meets the requirements of IEC 60947-5-1.

It has direct opening action, recommended by IEC 60204-1 Safety of Machinery - Electrical Equipment for Machines.

ELECTRICAL CONTROL USING INTERNALLY MOUNTED ACCESSORIES

Remote Tripping Devices

Shunt Trip (SHT)

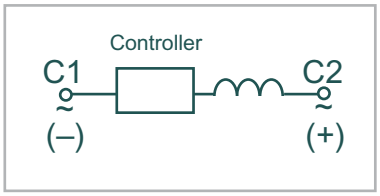
A shunt trip allows an MCCB to be tripped remotely on the application of the rated coil voltage across the shunt trip terminals. TemBreak 2 shunt trips have **continuously rated coils** and are suitable for use in electrical interlocking applications.

The MCCB contacts and toggle will move to the tripped position when the shunt trip is operated.

The permissible voltage range is 85% to 110% for AC or 75% to 125% for DC.

The cable capacity of the terminals is 0.5 to 1.25mm². Shunt trips are colour coded grey.

Shunt Trips



Terminal Designations of Shunt Trips

Ratings of Shunt Trips							
Rated Voltage	Voltage AC			Voltage DC			
	100-120	200-240	380-450	24	48	100-120	200-240
Excitation Current (A)	0.014	0.014	0.0065	0.03	0.03	0.011	0.011

Under Voltage Trip (UVT)

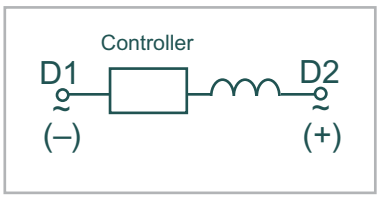
An undervoltage trip will trip the breaker automatically when the voltage applied to the terminals of the undervoltage coil drops to between 70% and 35% of its voltage rating. The undervoltage trip prevents the circuit breaker being closed unless a voltage corresponding to at least 85% of its voltage rating is applied across the terminals of the undervoltage coil.

The MCCB contacts and toggle will move to the tripped position when the under-voltage trip operates.

Undervoltage trips with AC operating voltages are available with 500ms time delays. Time-delay units are fitted to the outside of MCCBs.

The cable capacity of the terminals is 0.5 to 1.25mm². Undervoltage trips are colour coded grey and black.

Undervoltage Trips



Terminal Designations of Undervoltage Trips

Ratings of Undervoltage Trips						
	Power supply capacity (VA)			Excitation current (mA)		
Rated Voltage	Voltage AC			Voltage DC		
	100-120	200-240	380-450	24	100-120	200-240
Power Supply Capacity (VA)	1.4	1.4	2.28	23	10	10

TERMINATION OF CONTROL WIRING

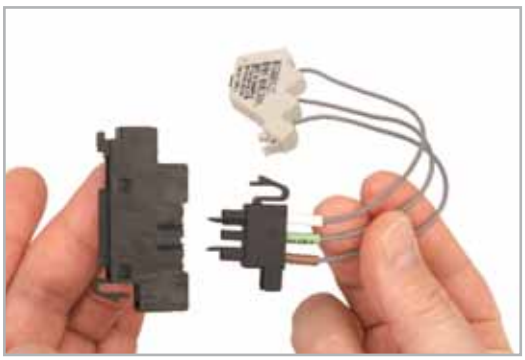
Terminal blocks are for optional use with all types of internally mounted accessory.

Terminal Block for Plug-in MCCBs

The terminal block for a plug-in MCCB consists of:

- a male section pre-fitted with 3 cables with which clips easily to the back of the MCCB
- a female section with 3 user terminals which clips easily into the plug-in base.

Up to 4 terminal blocks can be installed on a 125A, 160A or 250A frame MCCB. Up to 5 terminal blocks can be installed on a 400A or 630A frame MCCB.



Terminal Block for Plug-in MCCBs

Terminal Block for Front-Connected and Rear-Connected MCCBs (TF)

A terminal block facilitates convenient and accessible control wiring to internally mounted accessories especially the accessories with lead wire.
It allows the use of control wiring cables with larger cross-sectional area than permitted by the internal accessories themselves.

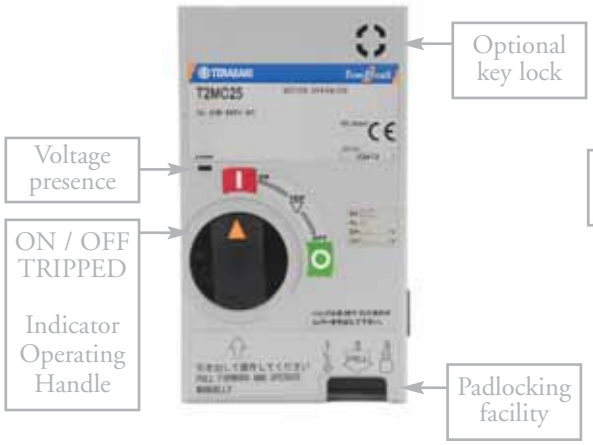
This terminal block can be clipped to either side of the MCCB. If mounted on the left incoming wiring will be fed vertically up to the terminals. If mounted on the right, the incoming wiring will be fed vertically down to the terminals.

The maximum incoming cable size to the terminal block is 2.0mm^2. 11terminals or 6 terminals can be specified. See page 120.

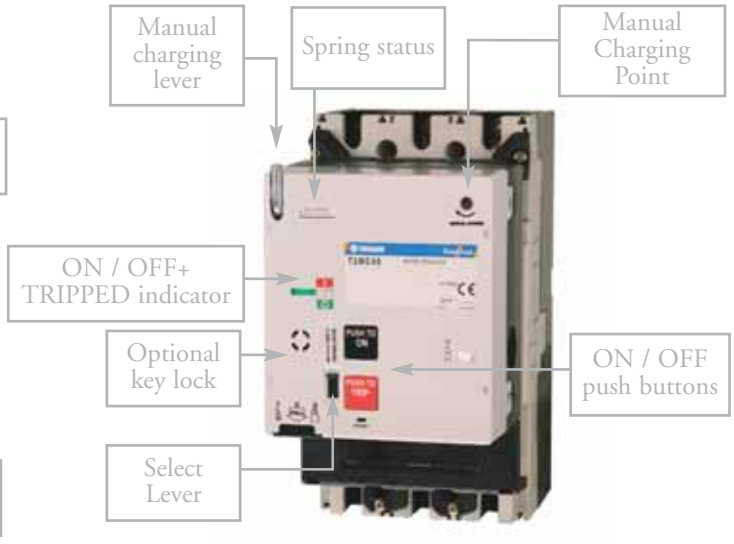
Terminal Block for Front-Connected and Rear-Connected MCCBs

ELECTRICAL CONTROL USING MOTORISED OPERATION

Overview – Motor Operators (MC)



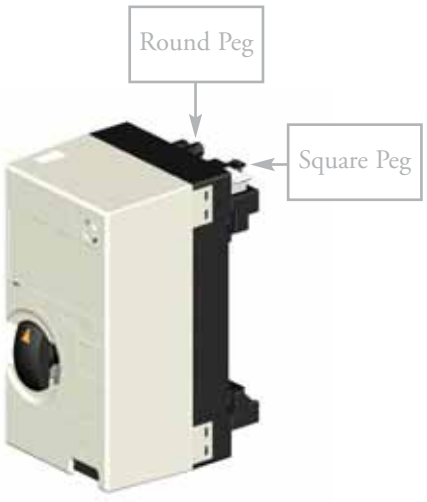
Motor Operator for 125A and 250A Frame MCCB's



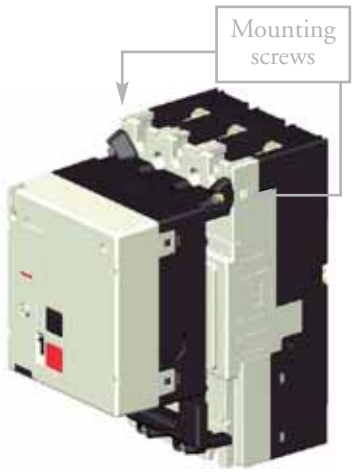
Motor Operator for 400A and 630A Frame MCCB's

Motor operators provide the possibility of opening and closing an MCCB on application of electrical control signals. TemBreak 2 motor operators are extremely reliable, having been designed to endure the same switching duty as the host MCCB.

- Easy field-installation.
- Fast operation (≤100ms).
- Positive contact indication.
- Padlocking facility as standard (Maximum 3, hasp diameter 8mm).
- Optional keylock.
- Versions available with automatic reset function.
- Voltage presence indication.



Motor Operator for 125A and 250A frame MCCB's



Motor Operator for 400A and 630A frame MCCB's

Motor operators for 125A and 250A frame are mounted on the front of the breaker. They can be rapidly fitted by locating the round pegs and square pegs on the motor into corresponding round and square holes on the breaker. It takes less than 10 seconds to secure the motor to the MCCB.Two levers securely lock the motor into position. No tools are needed to fit the motor operator.

400A frame and 630A frame motor operators are held in place with mounting screws. They can be installed easily in the field.

ELECTRICAL CONTROL USING MOTORISED OPERATION

Indication of ON, OFF or TRIPPED Status

The handle of 125A and 250A frame motor operators has dual functions:

1. Indication of ON, OFF or TRIPPED status as shown in the photographs below;
2. Manual operation when handle is pulled out. The supply to electrical control circuits inside the motor operator is cut when the handle is pulled out.

MCCB on

MCCB off

MCCB tripped

Motor operators for 400A and 630A frame MCCBs incorporate a mechanical flag which indicates the ON, OFF and TRIPPED status of the MCCB. They can be manually charged using the lever provided.

Ratings and Specifications

Frame size of host MCCB (A)		125, 160, 250	400, 630

Note: Operating times shown in the above table apply only when the rated operational voltage is supplied to the motor operator. The voltage supplied to the motor operator must be within the range of 85% and 110% of the rated operating voltage.

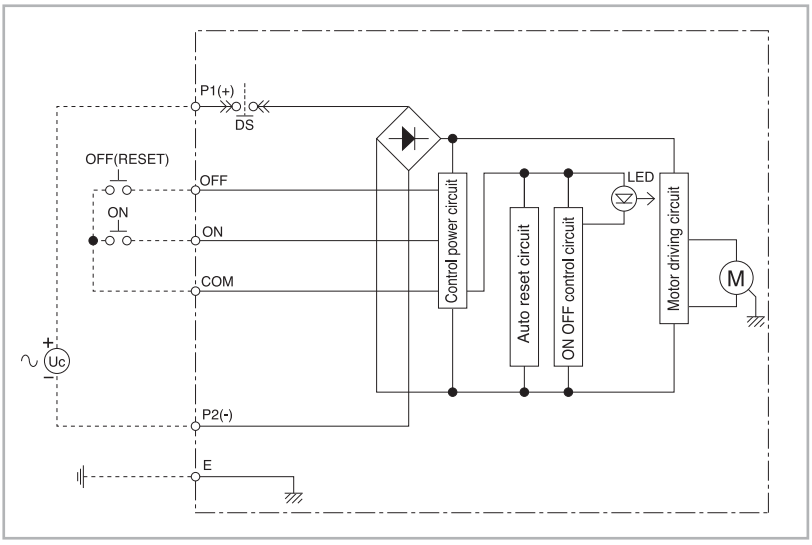
ELECTRICAL CONTROL USING MOTORISED OPERATION

Motor Operator Control Circuits

MCCB and Motor Operator Showing Control Wiring Socket

Control Wiring Plug

The Control circuits for Motor Operators are connected using a simple plug and socket system.



Control circuit for Motor Operators

Operation

The motor operator incorporates a self-hold circuit for the closing and opening signals. Therefore a momentary open or close signal will ensure a complete operation.

When the breaker trips, the breaker is reset by applying a signal to the OFF terminals of the motor.

When a UVT is used with a motor operator, design the control circuit so that the UVT is energised **before** a reset or close signal is sent to the motor operator. A 40ms time delay in the reset and close signals is sufficient to allow the UVT to energise.

When a shunt trip is used with a motor operator, design the control circuit so that the shunt trip is de-energised before a reset or close signal is sent to the motor operator.

When a mechanical interlock is used with motor operators, design the control circuit to provide electrical interlocking between the motor operators. The electrical interlocking should prevent a close signal being sent to a motor operator unless the other motor operator and circuit breaker are in the OFF position.

Auto- reset

Two types of motor operator are available: motor operators without auto-reset and motor operators with auto-reset. The correct type of motor operator should be selected for the application. MCCB auxiliary and alarm switches do not have to be used in the control circuits for motor operators whether they have auto-reset or not, saving cost and space.

OPERATING HANDLES & LOCKING DEVICES

TemBreak 2 external operating handles are extremely reliable, having been designed to endure the same switching duty as the host MCCB.

It is easy to fit the operating unit to the MCCB. Fitting involves three easy steps:

1. Align breaker toggle with operating mechanism
2. Push external operating handle into position (the handle's round pegs locate securely in the breaker's round holes and the external operating handle's* square pegs in the breaker's square holes).
3. Twist locking screws through 45 degrees.*

Safety Features

- Door interlock mechanism with override facility included as standard
- IP54 as standard (door mounted version), IP3X as standard (breaker mounted version)
- IP65 optional (door mounted version), IP5X optional (breaker mounted version)
- Locks OFF with up to 3 padlocks (8mm hasps)
- Optional keylock in OFF position
- Available in black or red and yellow
- A trip test can be performed with the external operating handle fitted to the MCCB

Orientation

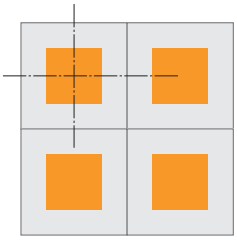
To switch the breaker from OFF to ON the external operating handle is rotated through 90 degrees in a clockwise direction.

MCCB ON

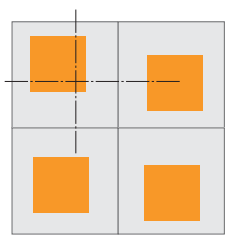
MCCB ON

The ON (I) and OFF (O) indication of the external operating handle can be re-oriented in steps of 90 degrees with respect to the operating mechanism. This allows the indication position to remain the same whether the breaker is mounted vertically (right side up or upside down) or horizontally (on its left side or on its right side). The hole cut-out dimensions for a panel or door will remain unchanged if the external operating handle is re-oriented. The external operating handle's axis of rotation is on the intersection of the centre lines of a 3P MCCB. This means that the positioning of the door cutouts is symmetrical for breakers mounted horizontally on either side of a vertical busbar system.

Cubicle Door Cutouts



Using TemBreak 2 Operating Handles

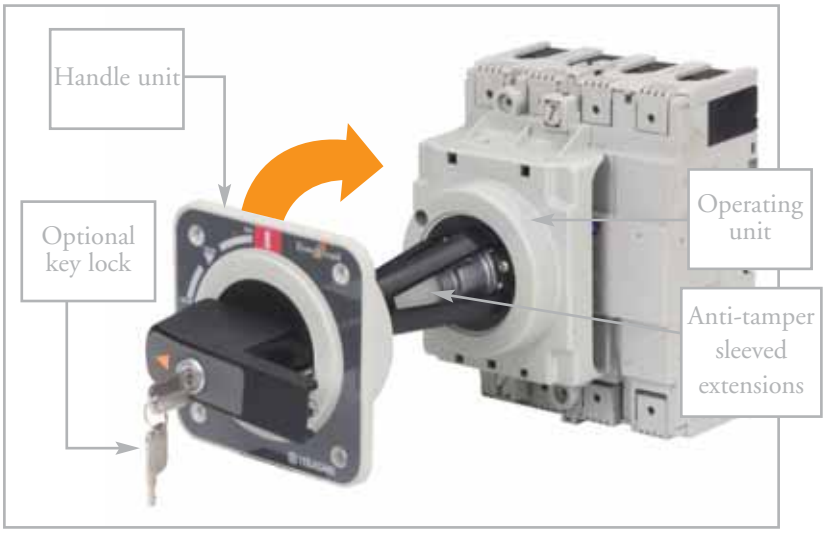


Using other MCCB Operating Handles

*external operating handles for 400A and 630A Frame models are secured with four screws.

OPERATING HANDLES & LOCKING DEVICES

Door Mounted Handle (HP)



Door Mounted Handle with Optional Keylock

The door mounted handle is used to operate a circuit breaker mounted inside a cubicle from outside the door. It consists of an operating mechanism that is mounted on the breaker, an operating handle that is mounted on the door, and a shaft that transmits the turning force from the handle to the operating unit. The shaft can be cut to the required length.

Breaker Mounted Handle (HB)

Breaker Mounted Handle Padlocked in the OFF Position

This external operating handle is used to operate a circuit breaker mounted just behind a compartment door with the door closed. The operating unit and the handle itself are mounted directly onto the circuit breaker. The handle protrudes through a cutout in the door. A moulded door flange is supplied with the external operating handle which covers the cutout from the front.

Padlocking and keylocking is possible in the OFF position.

Locking Devices

Toggle locking devices allow MCCBs to be locked ON or OFF using up to three padlocks. Locking devices for 125A, 160A and 250A frame models accept padlocks with 5mm hasp diameter. Locking devices for 400A and 630A frame models accept padlocks with 8mm hasp diameter.

S250 Locked OFF

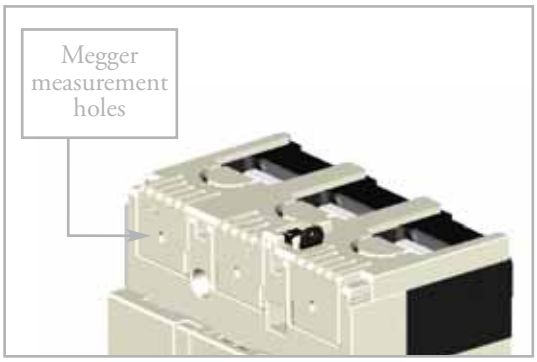
S400 Locked OFF

Fittings for Castell and Fortress locks are available. They are suitable for use on toggle-operated MCCBs, or on door mounted handles (HP) for MCCBs.

INSULATION ACCESSORIES

Terminal Covers

Terminal covers are used to prevent direct contact with live MCCB terminations. They also provide additional insulation to reduce the possibility of a short circuit between phases or to earth when large conductors are used.



General features

- Terminal covers require no tools for installation
- All terminal covers have an IP20 ingress protection rating
- Terminal covers are ordered individually. Two terminal covers are required to cover both the line and load terminals of an MCCB. Each cover can either be fitted to the top or bottom of the MCCB
- Terminal covers have a megger measurement hole of 4mm diameter on each phase.

Terminal Cover Lock with Lead Seal

Options

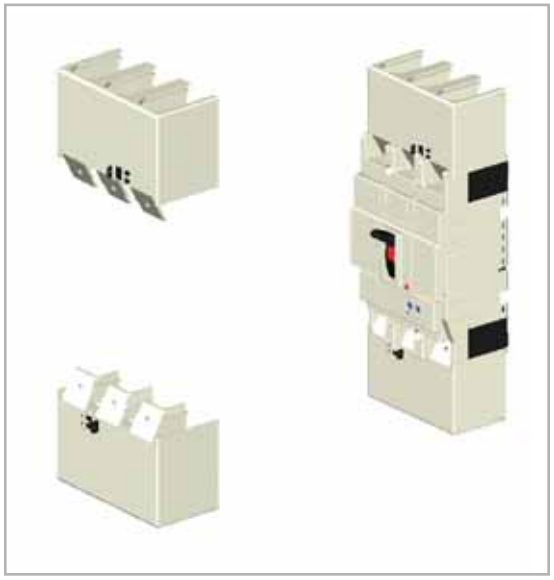
- A terminal cover lock allows an anti-tampering seal to be added.
- An earth barrier can be added to terminal covers for front connection. The earth barrier provides insulation at the rear of the terminations.

Earth Barrier Fitted to Rear of Terminal Cover

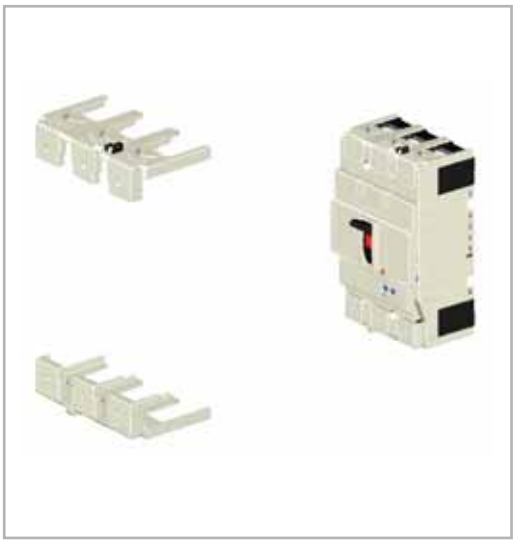
INSULATION ACCESSORIES

Terminal Covers for Front Connection (CF)

Terminal covers for front connection are suitable for covering the exposed live parts of conductors terminated on the MCCB.



Terminal Covers for Front Connection



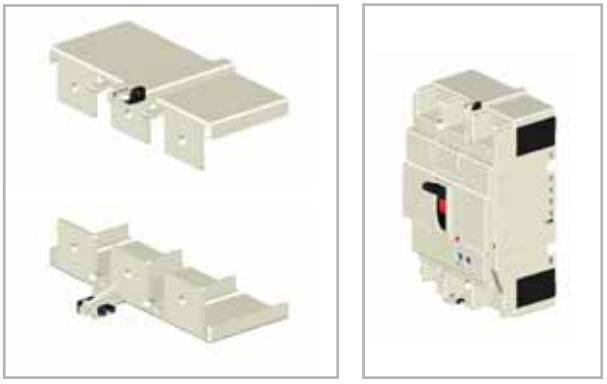
Flush Terminal Covers

Flush Terminal Covers (CS)

Flush terminal covers are useful for increasing the ingress protection rating at the terminals without increasing the overall length. They can be used with busbar and for direct entry of stranded cable (with cable clamp terminals (FW), refer to Section 6, Installation).
Flush terminal covers are identical to rear terminal covers for 400A and 630A frame models.
The user can remove a section of the rear terminal cover using a tool to allow entry of the conductor.

Terminal covers for Rear Connection (CR)

Terminal covers for rear connection may be used on MCCBs fitted with rear connections (RC) or plug-in connections (PM). They prevent access to the terminals from the front and top.



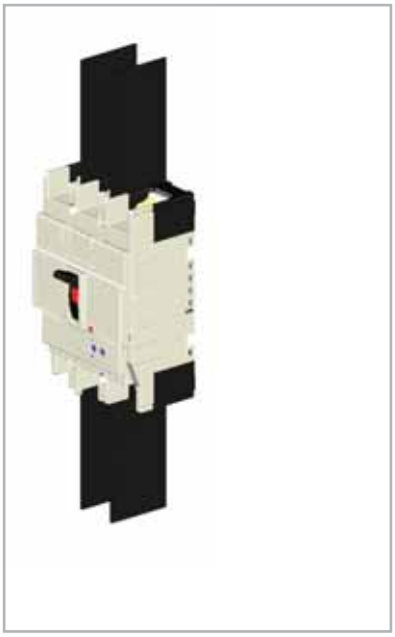
Terminal Covers for Rear Connection

INSULATION ACCESSORIES

Interpole Barriers (BA)

Interpole barriers provide maximum insulation between phases at the terminals of the MCCB. They cannot be fitted at the same time as any of the terminal covers. Interpole barriers for use on one end of the MCCB are supplied as standard. Additional interpole barriers can be ordered individually. All interpole barriers can easily be fitted to either end of an MCCB.

MCCB moulds have been designed to accept an additional interpole barrier between two adjacent MCCBs.



MCCB Fitted with Interpole Barriers on Both Ends

Interpole Barriers between Adjacent MCCBs

ACCESSORIES FOR DUAL SUPPLY CHANGEOVER SYSTEMS

Where more than one AC voltage source is available to a distribution system it is often necessary to prevent multiple sources supplying the system at one time. Interlocking accessories are used together with two MCCBs to prevent both being in the ON state simultaneously. This provides a secure mechanical means of preventing the connection of two supply sources.

An automatic changeover controller can monitor the status of two supplies and control the switching of two MCCBs according to pre-programmed parameters. When an automatic changeover controller is interfaced to a pair of interlocked MCCBs fitted with remote control accessories, a secure, fully automatic changeover system is achieved.

Link Interlock

Changeover Pair with Link Interlock and Motor Operators

Viewed from Below

Link Interlock (ML)

Link interlocks consist of a mechanism mounted to each MCCB in an adjacently mounted pair. The link between each mechanism inhibits the closure of one MCCB unless the other is in the OFF position.

Link interlocks can be used on a mixture of 3 and 4 pole breakers of the same frame size.

The TemBreak 2 link interlock is an innovative design breakthrough which will save space, time and money for switchboard builders in that:

- Installation is extremely simple. Link interlocks are field-installable and only require a screwdriver to fit.
- Link interlocks replace the accessory cover on the front of the breaker
- Motor operators and operating handles are compatible with link interlocks
- The interlock is installed on the front of the MCCB and does not therefore interfere with copperwork or cables
- No need to buy factory-built backplates with MCCBs and interlocks pre-fitted
- **An automatic changeover pair consisting of an interlocked pair of MCCBs with internal control accessories and motor operators can be assembled in a few minutes!**

ACCESSORIES FOR DUAL SUPPLY CHANGEOVER SYSTEMS

Wire Interlock (MW)

Wire interlocks consist of two mechanisms connected by a cable. The mechanisms are mounted on two MCCBs located at a distance from each other which is limited by the length and bend radius of the cable. The mechanisms and cable inhibit the closure of one MCCB unless the other is in the OFF position. Each mechanism is ordered separately. Cables of 1.0m or 1.5m length are also ordered as separate items.

Wire interlocks can be used on a mixture of 3 and 4 pole MCCBs of different frame sizes. This allows potential cost savings by using lower rated MCCBs for the alternative power supply. MCCBs can be mounted in different switchboard compartment or on different planes.

Changeover Pair with Wire Interlock and Motor Operators

View from above

The TemBreak 2 wire interlock is an innovative design breakthrough which will save space, time and money for switchboard builders in that:

- Installation is extremely simple. Wire interlocks are field-installable.
- Wire interlocks replace the accessory cover on the front of the breaker
- Motor operators and operating handles are compatible with wire interlocks
- Interlocking of MCCBs mounted in different compartments is possible
- No need to buy factory-built backplates with MCCBs and interlocks pre-fitted
- **An automatic changeover pair consisting of an interlocked pair of MCCBs with internal control accessories and motor operators can be assembled in a few minutes!**

Slide Interlock (MS)

Slide interlocks are manually operated toggle locking devices which can be installed between two adjacent MCCBs. Depending on the position of the slide, one or other of the MCCBs on either side of a slide interlock is inhibited from being in the ON position.

Slide interlocks can be used between MCCBs of the same number of poles and of the same frame size.

Slide interlocks can be installed in the field and are padlockable in both positions.

Slide Interlock Installed Between two MCCBs

ACCESSORIES FOR DUAL SUPPLY CHANGEOVER SYSTEMS

TemTransfer Automatic Changeover Controller

The TemTransfer is a fully configurable **Automatic Changeover Controller** (ACC). It is designed to monitor the incoming AC mains supply (1 or 3 phases) for under/over voltage and under/over frequency. Should these fall out of limits, the module will issue a start command to the generating set controller. Once the set is available and producing an output within limits the ACC will control the transfer devices and switch the load from the mains to the generating set. Should the mains supply return to within limits the module will command a return to the mains supply and shut down the generator after a suitable cooling run. Various timing sequences are used to prevent nuisance starting and supply breaks.

TemTransfer is compatible with TemPower 2 ACBs, TemBreak 2 MCCBs and TemContact contactors.

When TemTransfer is used with a pair of TemBreak 2 MCCBs, additional control wiring and components may be necessary for some control schemes. Contact us for details.

Terasaki can supply TemTransfer pre-configured to specification, or unconfigured with an optional interface kit.

Configuration is by PC based software and the interface kit using an FCC68 socket on the rear of the module. This allows rapid and secure configuration of the module. The FCC68 socket also provides full real-time diagnostics on the status of the ACC, its inputs and outputs.

Configuration and connection options allow for a wide range of **higher functions** such as *'Auto start inhibit'*, *'Manual restore to mains'*, *'Load inhibit'* (both mains and gen-set), *'Lamp test'*, *Push-button transfer control, External mains* or *Gen-set failure inputs,* etc.

The four position key-switch allows for mode selection:-

- Auto Mode
- Auto mode with manual return to Mains
- Run generator off load
- Run generator on load

A clear mimic diagram with 'International' symbols and LEDs provide clear indication of supply availability and load switching status. Further LED indication is provided for *'Start delay in progress'* and *'Mains return timer active'*. Two **user configurable LED's** are provided to allow the user to display specific states (defaulted to indicate that the closing procedure of the Mains or Generator circuit breaker has been started).

Five **user configurable relays** are provided to allow control of contactors, different circuit breaker types and engine control modules and alarm systems.

The controller features a self seeking power supply which will utilise power from the Mains AC supply or the Generator AC supply. A DC supply to the module is not essential for basic operation, though some 'higher' functions require it (such as system diagnostics).

The module is mounted in a robust plastic case, connection to the module is via plug and socket connectors.

TemTransfer Automatic Changeover Controller

ACCESSORIES FOR DUAL SUPPLY CHANGEOVER SYSTEMS

Specifications

DC Supply

The TemTransfer is normally powered from the AC sensing supplies. It will only draw power from the DC supply if both AC supplies are not present.

DC power should be supplied from a low voltage supply between 8 to 35V continuous. It is able to operate at 0V for 50ms during cranking, providing supply was at least 10V before dropout and supply recovers to 5V. This is achieved without the need for internal batteries.

Maximum operating current:
150mA @ 12V, 95mA @ 24V.

Maximum standby current (AC powered supply)
34.7 mA @ 115V. 16.1mA @ 230V.

3 Low voltage auxiliary relay contacts:
8Amp DC rated 1 each: NO+NC C/O
(a and b C/O contacts)

2 Mains rated relay contacts:
8Amp RMS rated 1 each NO+NC.
(a and b contacts)

Dimensions:
96 x 144 x 155 DIN STANDARD.

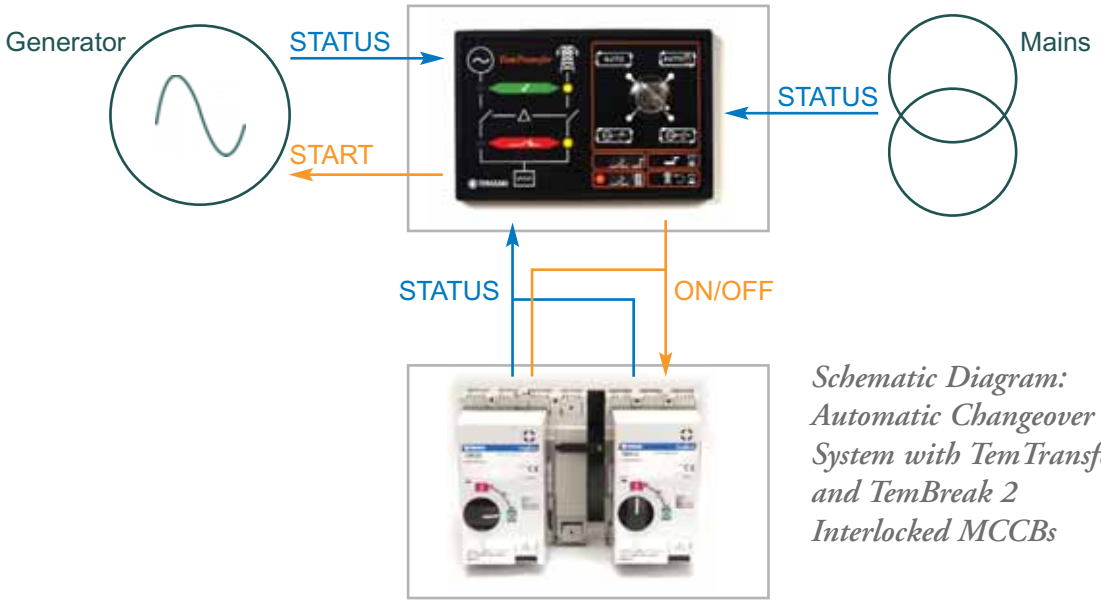
Operating temperature range:
-15 to +55oC

Indication LED's:
Mains Available/On Load, Generator Available/On load, Start Delay, Mains Return Delay and 2 User Configurable.

Operating voltage: - Specify on ordering.

AC Voltage Input Range (for AC Powered Operation):
115V Version:- 88 - 160 V ac RMS
230V Version:- 176 - 305 V ac RMS

AC Voltage Input/Adjustment Range (Sensing Operation):
115V Version:- 55 - 152 V ac RMS
230V Version:- 110 - 304 V ac RMS
AC Frequency Input/Adjustment Range:10 - 75 Hz



Schematic Diagram: Automatic Changeover System with TemTransfer and TemBreak 2 Interlocked MCCBs

SECTION 5

MODULAR SIZES

All current ratings up to 630A can be supplied in **2 sizes:** the 250A and 630A sizes.

The compact 125A size offers **the same** features and performance but with reduced dimensions and cost.

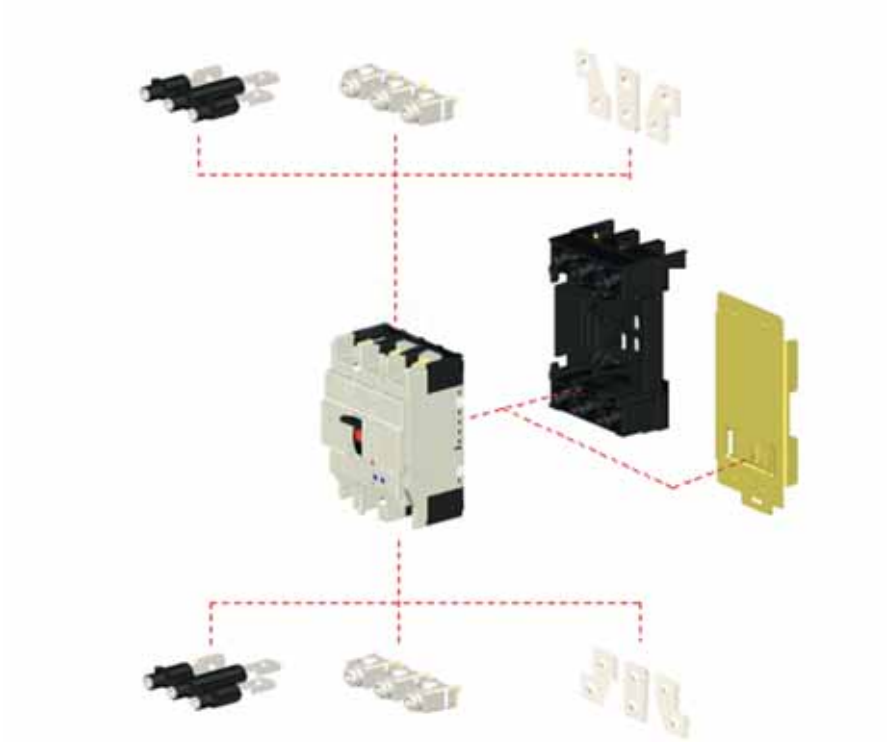
CONNECTION AND MOUNTING OPTIONS AND ACCESSORIES

TemBreak 2 MCCBs connection and mounting accessories facilitate easy installation in any arrangement. Breakers and accessories are easy to fit. They are designed to provide safe and secure termination and mounting points. 125A and 160A/250A frame models have a choice of 45mm front cutout patterns

Optional 45mm Cutout Patterns

Connection and mounting options overview diagram



Overview of Connection and Mounting Accessories

Please refer to Section 2, Ratings and Specifications, for details of the connection and mounting options which are available for each model.

Please refer to Section 7, Dimensions, for detailed dimensions of connection and mounting options and accessories.

Note that one set of mounting screws is supplied as standard with every circuit breaker or switch disconnector purchased.

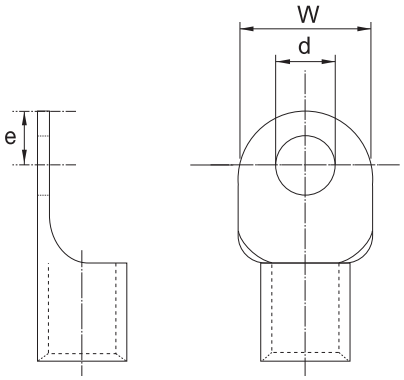
CONNECTION AND MOUNTING OPTIONS AND ACCESSORIES

Connection of Busbars and Terminated Cables

This connection method is standard for all **front connected** (FC) MCCB models. Solid conductors or cables terminated with crimp lug terminals can be used.

Serrated Terminal Surface

Each terminal on 160A and 250A models has a serrated surface. This provides excellent grip for heavy cables terminated with crimp lug terminals, thereby preventing sideways rotation of the lug.



Maximum Dimensions of Compression Terminals			
Frame Size (A)	125*	160 & 250	400 & 630
Width, W (mm)	17	25	25
Diameter, d (mm)	9	9	11
Maximum from centre to tip, e(mm)	8.5	10	12

Connection of Large Conductors and Multiple Conductors

Flat bars (FB) are terminal extensions which can be fitted to line or load side terminals and are used to connect large conductors and multiple conductors. Available for field fitting in sets of 3 or 4 bars.

*H125 and L125 are 250A frame size

CONNECTION AND MOUNTING OPTIONS AND ACCESSORIES

Direct Entry of Stranded Cable

Cable clamp terminals (FW) can be used to secure stranded cable directly to the MCCB. Available for field fitting in sets of 3 or 4.

MCCB Model	Cable Capacity (mm^2)
E125, S125, S125-NF	1.5 to 50 (1 cable)
H125, L125, S160-NF	1.5 to 70 (1 cable)
S160, E250, S250, H250, L250	35 to 120 (1 cable)
E400, S400, H400, L400	80 to 240 (1 cable)
	60 to 120 (2 cables)

Termination in Separate Compartment

Rear connections (RC) allow termination of conductors in a different switchboard compartment to the MCCB body.

The stud can be rotated in steps of 45 degrees in the field.

CONNECTION AND MOUNTING OPTIONS AND ACCESSORIES

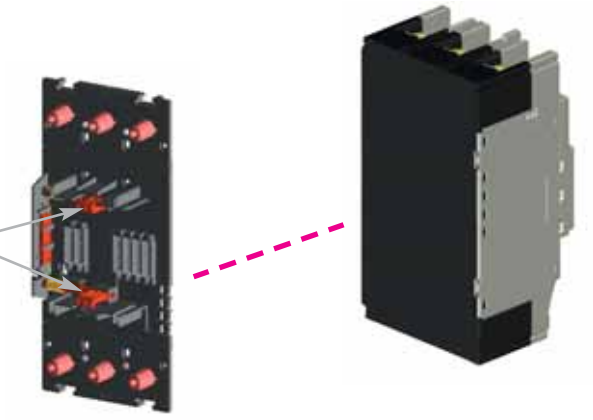
Plug-in Mounting

The plug in mounting system allows fast replacement of the MCCB body without the need to disturb the terminations. Solid conductors or cables terminated with compression terminals can be used.

Plug-In Safety Lock

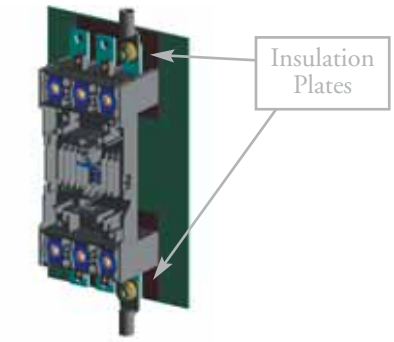
The plug-in MCCB body is **automatically locked to the base** when the contacts are closed (toggle ON). It cannot be removed unless the contacts are in the isolated position (toggle OFF or TRIPPED). This system ensures safe removal of the MCCB from the base.

Plug-in MCCB and base



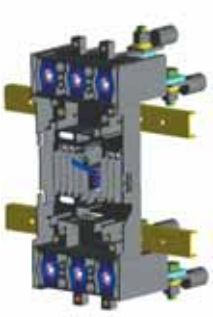
Plug-in connections and safety lock are fitted to the back of the MCCB

The connection bars for plug-in bases are optional and can be configured in the field either for front or rear access. The illustrations below show possible mounting and connection options for plug in bases.



1. Mounted on base plate with connection bars mounted for front access.
   Insulation plates are supplied as standard and must be fitted.

2. Terminations in separate compartment. Connection bars are mounted for top access at the top and rear access at the bottom.



3. Mounted on angle bars. Connection bars are mounted for rear access.

CONNECTION AND MOUNTING OPTIONS AND ACCESSORIES

Mounting on 35mm DIN Rail

The DIN rail adaptor is easily fitted to the rear of 3 pole E125 and S125 models to allow clip mounting of the MCCB to 35mm DIN rail.

The 45mm cutout of TemBreak 2 devices makes them suitable for mounting alongside modular devices in distribution boards.

Door Flanges

A range of flanges which improves the appearance of door cutouts is available. These are suitable for toggle-operated and motor-operated MCCBs and switch-disconnectors.

INSULATION DISTANCES

The insulation distances between the MCCB and earthed metal parts and insulators shown in this section must be maintained to prevent arcing faults occurring due to conductive ionised gas. In cases where other specifications require different insulation distances to those shown here, the greater distance must be maintained. In cases where two different models are installed one above the other, the insulation distance between the two models should be as for the lower model.

ATTENTION

Exposed conductors must be insulated up to the breaker terminals. Interpole barriers or optional terminal covers are recommended. If optional terminal covers are used, insulate the exposed conductor until it overlaps the terminal cover.

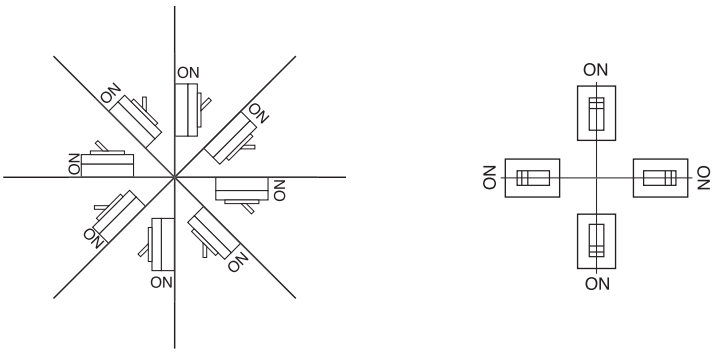
***Note:** (1) Insulate the exposed conductor until it overlaps the moulded case at the terminal, or the terminal cover.
(2) 10mm at 440V AC Maximum.

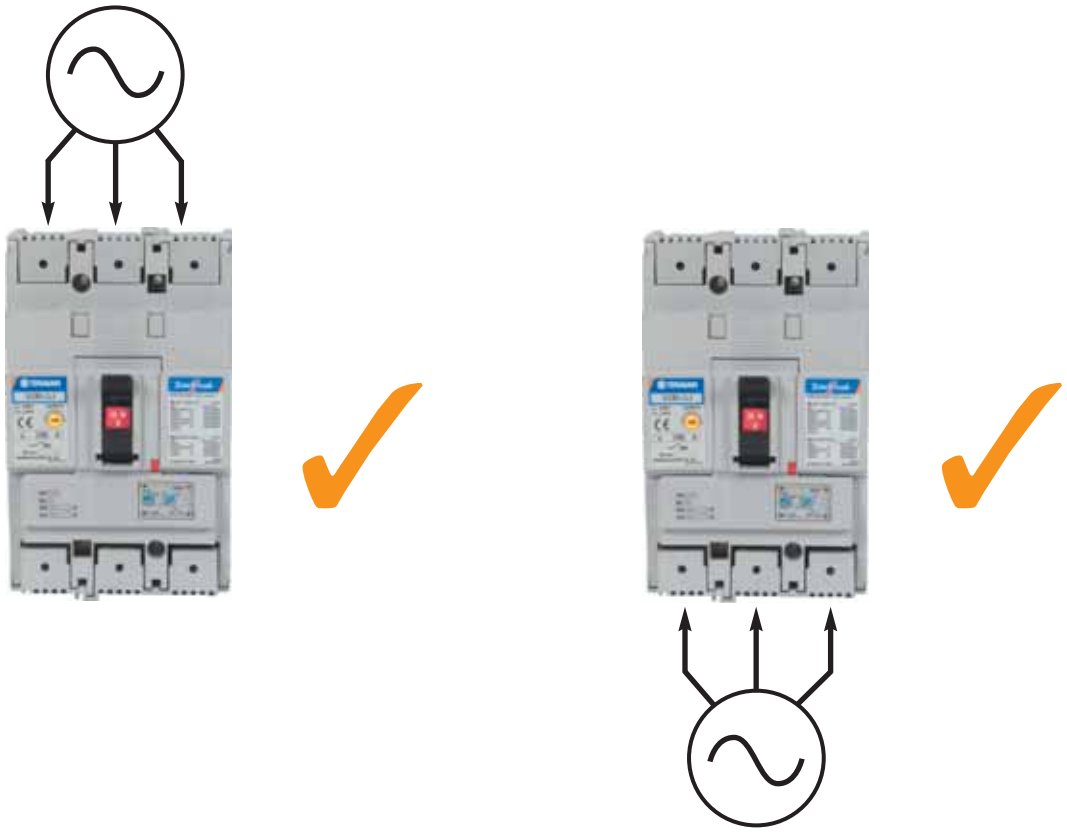
MOUNTING ANGLE

TemBreak 2 MCCBs may be mounted at any angle without affecting performance.



Mounting angle does not affect performance.

DIRECTION OF POWER SUPPLY



Power can be supplied through TemBreak 2 MCCBs in either direction without loss of performance.

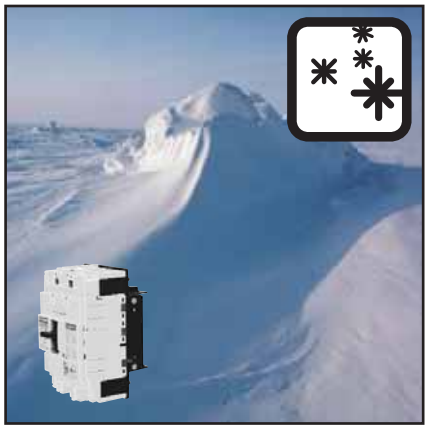
STANDARD INSTALLATION ENVIRONMENT AND SPECIAL TREATMENTS

TemBreak 2 MCCBs are intended for installation in the following conditions as standard:

- Operating ambient temperature -5 degrees C to 45 degrees C. Refer to page 90 for thermal derating information above this temperature.
- Relative humidity of up to 85%.
- Altitude up to 2000m.
- Atmospheres free from dust, smoke, corrosive gases, inflammable gases, moisture and salt.

For installation in conditions more onerous than those described above, contact Terasaki for details.

The following special treatments have been developed for installation in specific environmental conditions:



- Low temperature treatment. For installation at temperatures down to -40 degrees C for storage and -20 degrees C for operation. The environment must be free from rapid changes in temperature that result in the formation of condensation.

- Fungus-moisture proofing. For installation at temperatures up to 60 degrees C and relative humidity of up to 95%. The environment must be free from rapid changes in temperature.

- Anti-corrosion treatment. MCCB is surface treated to increase resistance to corrosion.
  If the MCCB is to be installed in atmosphere that contains excessive volumes of corrosive gases or moisture, it should be house in an airtight enclosure.

EASY SELECTION GUIDE

You can save space and money with Terasaki's new compact and economical Mini Moulded Case Circuit Breakers.

The range of products includes:

- Moulded Case Circuit Breakers (MCCBs)
- Switch Disconnectors in the same compact moulded case frame sizes as MCCBs
- A comprehensive range of accessories.

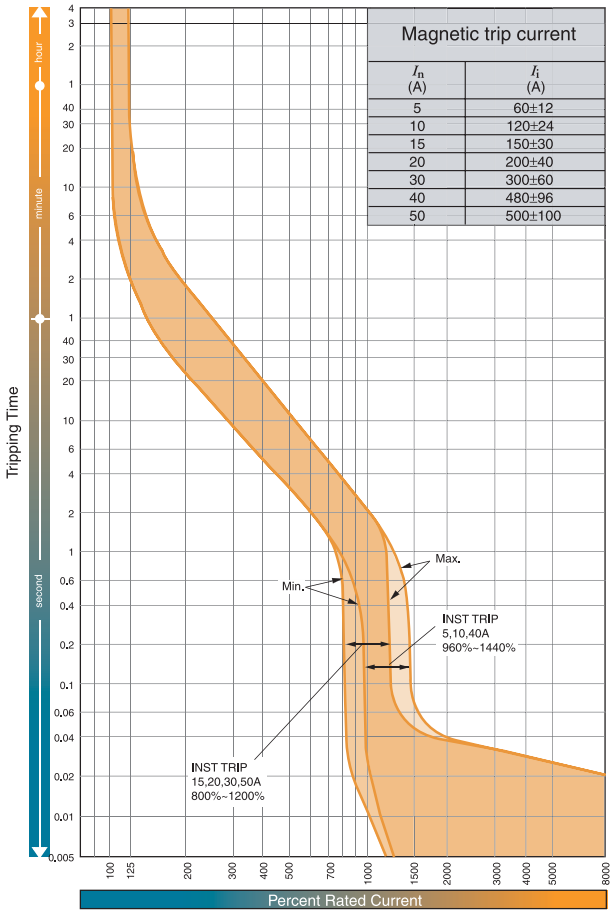
OPERATING CHARACTERISTICS

50A and 100A Frame

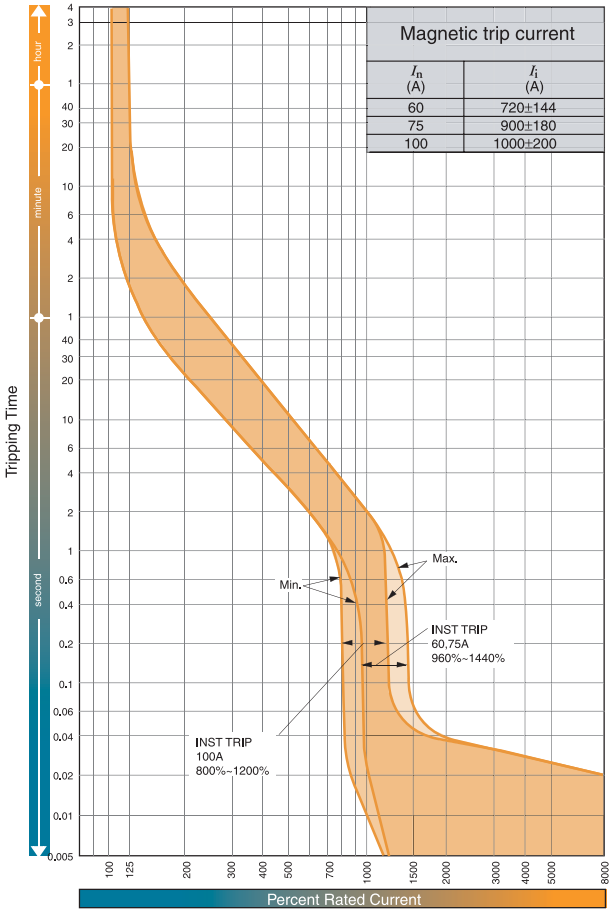
Time/current characteristic curves

S50-NF

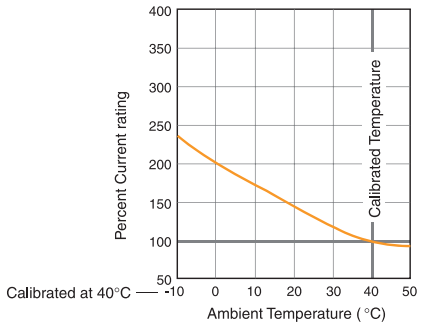


Time/current characteristic curves

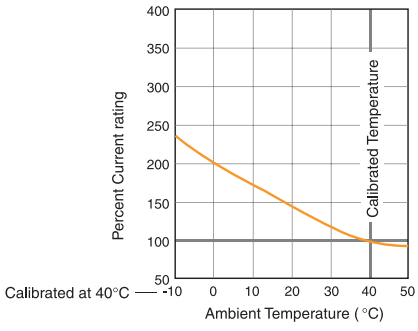
E100-NF



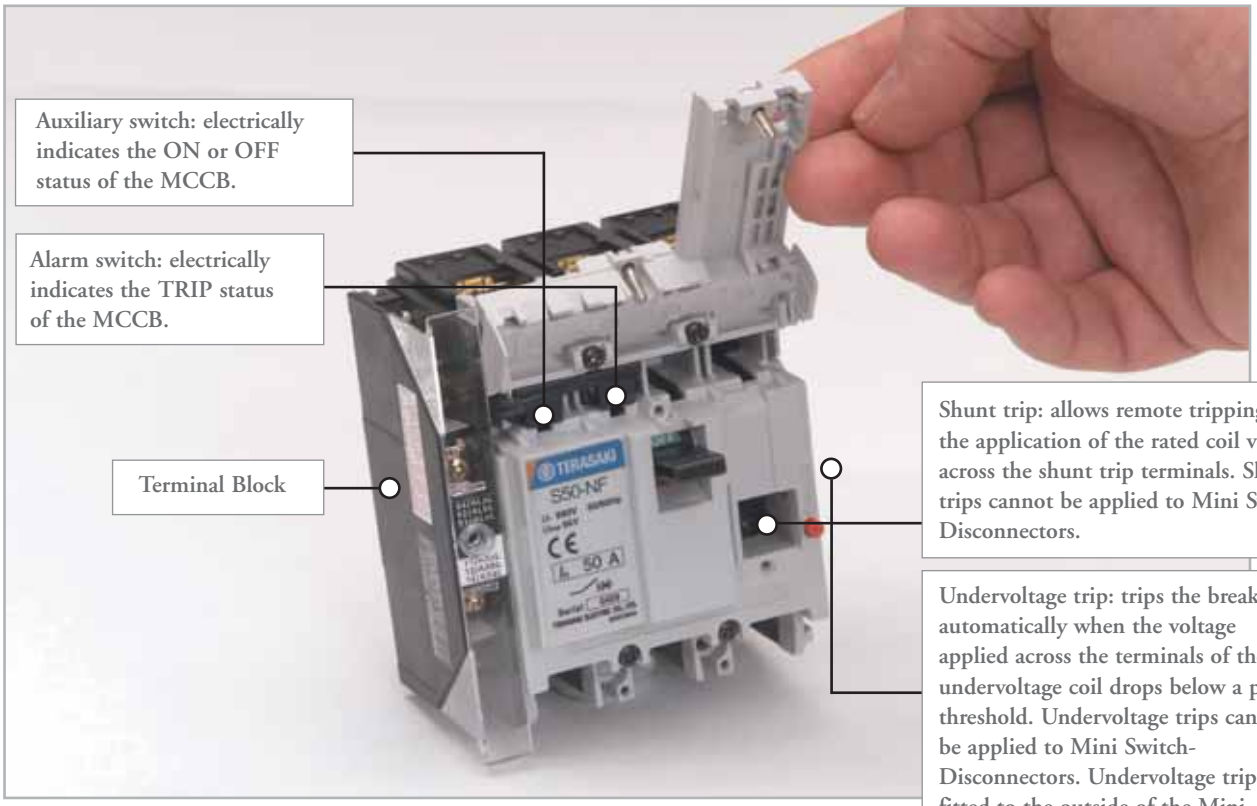
Ambient compensating curves



Ambient compensating curves



ELECTRICAL CONTROL ACCESSORIES

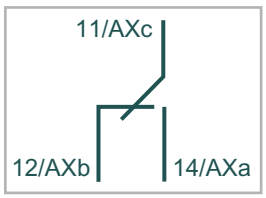


S50-NF with Terminal Block Installed and Accessory Hatch Opened

Maximum Permitted Combinations of Electrical Control Accessories

1. Left-hand side internal accessory location: 1 auxiliary switch AND 1 alarm switch.
2. Right-hand side internal accessory location: (1 auxiliary switch AND 1 alarm switch) OR 1 shunt trip.
3. Right-hand side external accessory location: 1 undervoltage trip. The undervoltage trip cannot be used in the same Mini MCCB as a shunt trip. The undervoltage trip is compatible with 1 auxiliary and 1 alarm switch installed in the right-hand side internal accessory location.

ELECTRICAL CONTROL ACCESSORIES

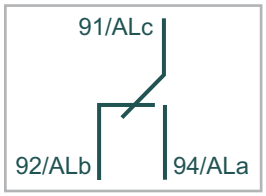


Terminal Designations and Function of Mini Auxiliary Switch

Mini Auxiliary Switch (AX)

An auxiliary switch electrically indicates the ON or OFF status of the MCCB. The Mini type is a changeover switch with 3 terminals.

A microcurrent version is available for switching currents as low as 1mA.



Terminal Designations and Function of Mini Alarm Switch

Mini Alarm Switch (AL)

An alarm switch electrically indicates the TRIP status of the MCCB. The Mini type is a changeover switch with 3 terminals.

A microcurrent version is available for switching currents as low as 1mA.

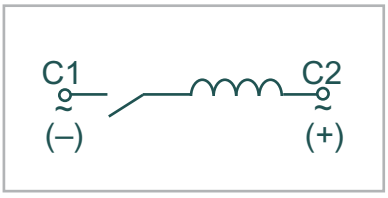
Ratings of Auxiliary and Alarm Switches

Auxiliaries and Alarm Switch ratings						
AC			DC			
Volts (V)	Amperes (A)		Volts (V)	Amperes (A)		Minimum Load
	Resistive Load	Inductive Load		Resistive Load	Inductive Load	
480	-	-	250	0.3	0.3	160mA
250	5	5	125	0.6	0.6	at 5V DC.
125	5	5	30	3	3	30mA at 30V DC.

Microcurrent versions		
DC		
Volts (V)	Amperes (A) Resistive Load	Minimum Load
30	0.1	1mA at 5V DC to 30V DC.

Ratings of Shunt Trip

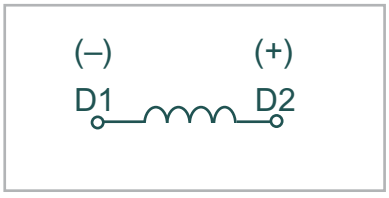
Excitation current (A) peak value (value at maximum voltage)				
Rated Voltage (V)	Voltage (AC)			Voltage (DC)
	100-120	200-240	380-450	100-110
Excitation Current (A)	1.5	0.75	0.53	1.5



Terminal Designations of Shunt Trips

Ratings of Undervoltage Trip

Power supply capacity (VA)				Excitation current (mA)
Rated Voltage (V)	Voltage (AC)			Voltage (DC)
	100	200	400	100-110
Power supply capacity (VA)	2.8	3.4	4.4	28.6



Terminal Designations of Undervoltage Trips

SECTION 8

TERMINATION OF CONTROL WIRING

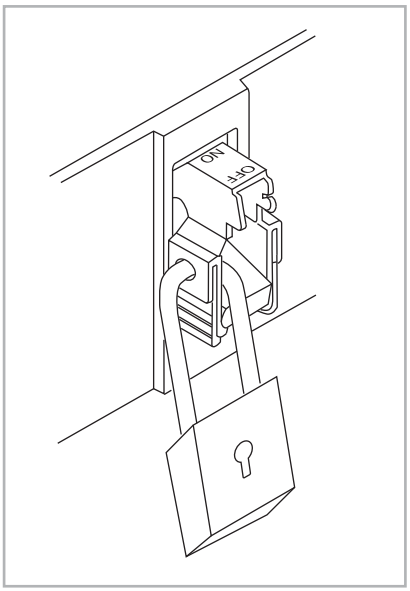
Terminal Block

Mini MCCB with Terminal Block Installed

A terminal block facilitates convenient and accessible control wiring to electrical accessories. The terminal block allows the use of control cables with cross-sectional area of up to 2mm^2. Tightening torque for the terminal screws is 0.9 to 1.2Nm.

TOGGLE LOCK

A Toggle lock is an optional accessory which enables the user to padlock the handle of the Mini MCCB in either the OFF or ON position. The Mini MCCB has a trip-free mechanism meaning that the contacts will open to clear an overcurrent even if the handle is locked ON.



Toggle Lock

INSULATION ACCESSORIES

Terminal Covers for S50 and E100

Terminal Covers are used to prevent direct contact with live Mini MCCB terminations. They also provide additional insulation that reduces the possibility of a short circuit between phases or to earth.

Terminal covers are available for Mini MCCBs with front and rear connection terminals.

Earth barriers are available which insulate the rear of the MCCB from the surface on which it is mounted.

Interpole Barriers for S50 and E100

Interpole barriers provide maximum insulation between phases at the terminals of the Mini MCCB.

MECHANICAL INTERLOCKS

Interlocks for TemBreak 2 Mini MCCBs are manually operated toggle locking devices which can be installed between two adjacent MCCBs. Depending on the position of the slide, one or other of the MCCBs is prevented from being switched ON.

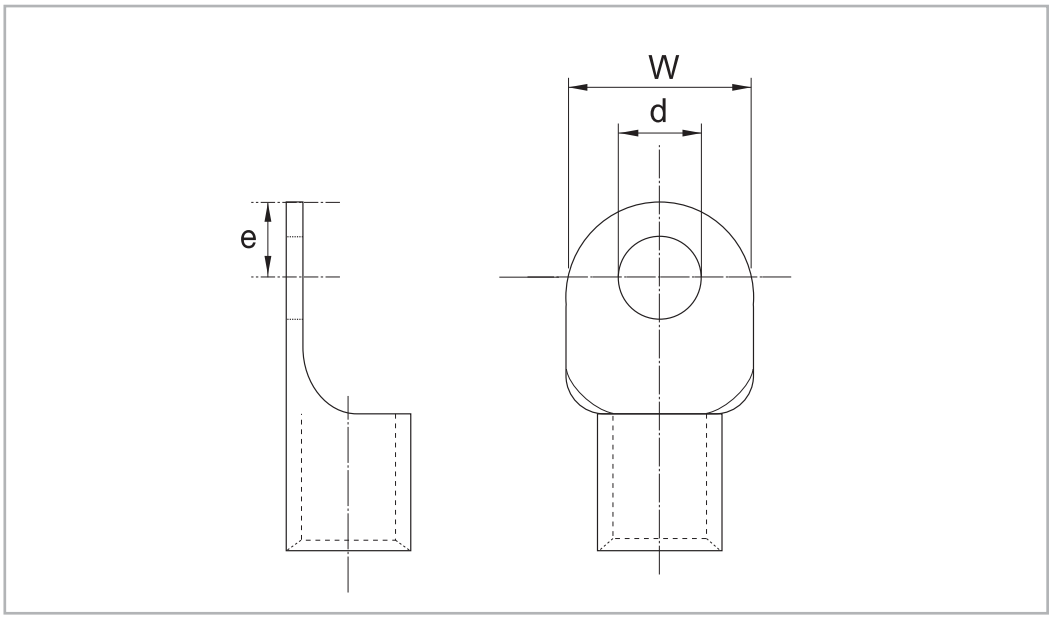
Mechanical interlocks can be used between any two Mini MCCBs.

Mechanical interlocks can be installed in the field and are padlockable in both positions.

INSTALLATION

Connection of Busbars and Terminated Cables

This connection method is standard for all front connected (FC) Mini MCCBs. Solid conductors or cables terminated with compression terminals can be used.



Maximum Dimensions of Compression Terminals		
Frame Size (A)	50	100
Width, w (mm)	15	15
Diameter, d (mm)	5.5	9
Hole distance, h (mm)	7	7

INSTALLATION

Mounting on DIN Rail

S50 and E100 Mounted on 35mm DIN Rail

TemBreak 2 Mini MCCBs can be clip mounted to 35mm DIN rail. The DIN rail clips are built-in to the MCCB as standard.

Termination in a Separate Compartment

S50 Fitted with Rear Connections

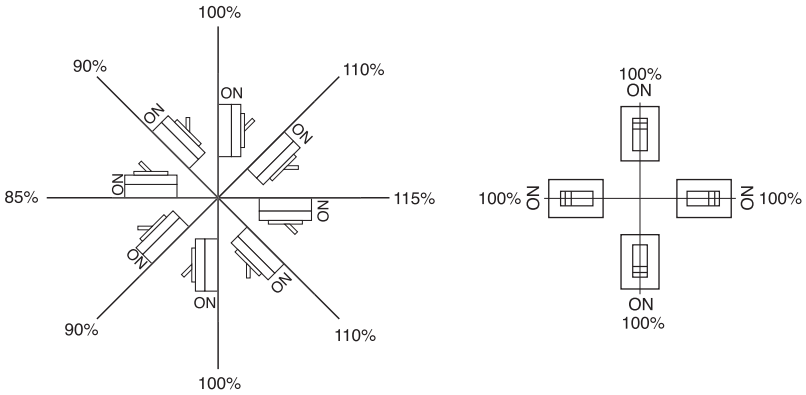
Rear Connections for Field Installation

Rear connections allow termination of conductors in a different switchboard compartment to the MCCB body.

The stud can be rotated in steps of 90 degrees in the field.

INSTALLATION

Mounting Angle

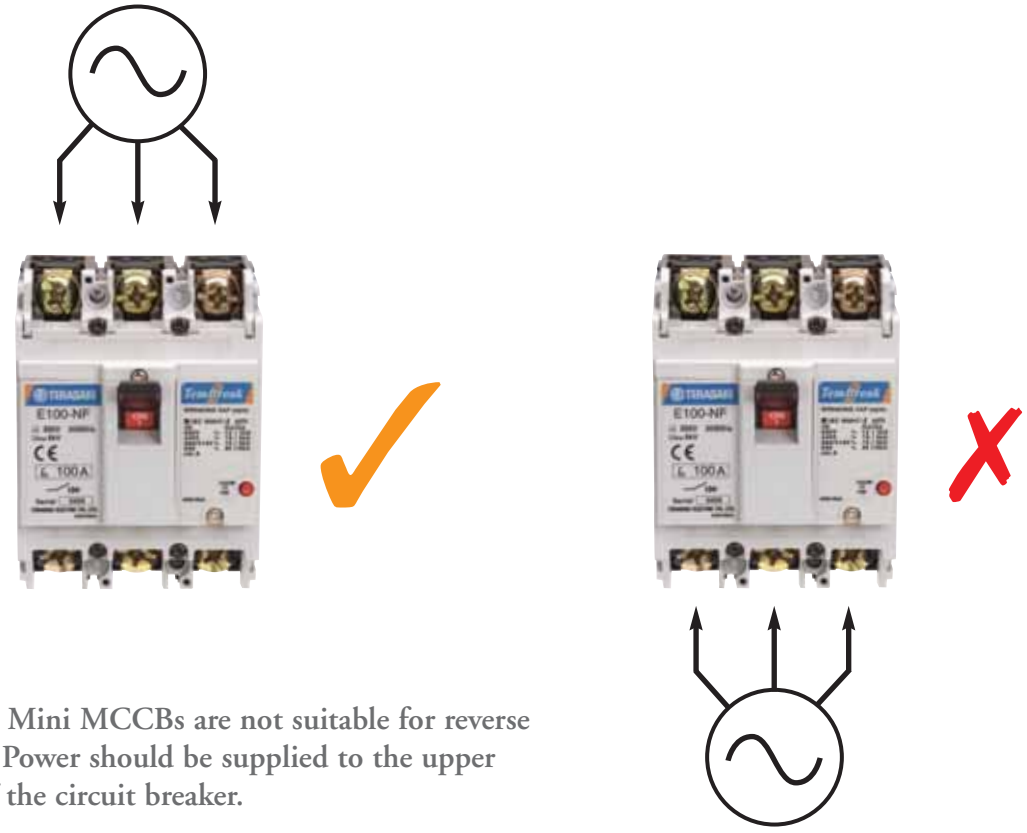


Percentage Change in Rated Current, I_R, According to Mounting Angle

Overload protection of TemBreak 2 Mini MCCBs is provided by magnetic-hydraulic elements. The overload tripping characteristics vary depending upon the mounting angle due to the effect of gravitational force that the iron core in the oil dashpot receives.

It is recommended that the breakers be oriented vertically where possible.

Direction of Power Supply



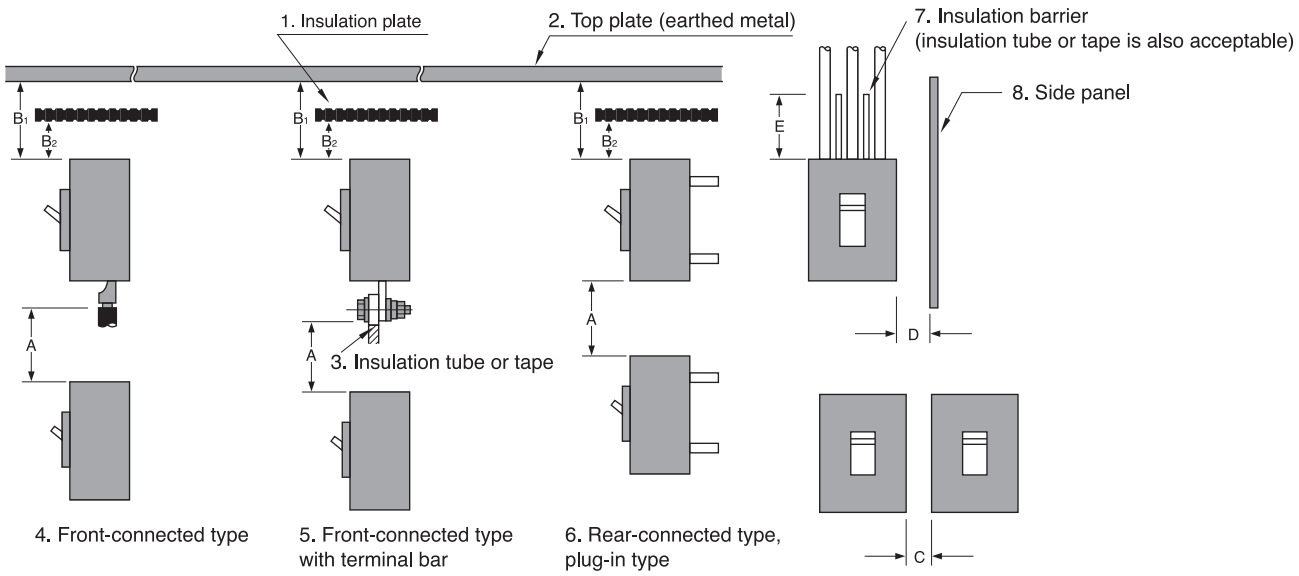
TemBreak 2 Mini MCCBs are not suitable for reverse connection. Power should be supplied to the upper terminals of the circuit breaker.

INSULATION DISTANCES

The insulation distances between the MCCB and earthed metal parts and insulators shown in this section must be maintained to prevent arcing faults occurring due to conductive ionised gas. In cases where other specifications require different insulation distances to those shown here, the greater distance must be maintained. In cases where two different models are installed one above the other, the insulation distance between the two models should be as for the lower model.

ATTENTION

Exposed conductors must be insulated up to the breaker terminals. Interpole barriers or optional terminal covers are recommended. If optional terminal covers are used, insulate the exposed conductor until it overlaps the terminal cover.



A. Distance from lower breaker to exposed live part of upper breaker terminal (front-connected type) or distance from lower breaker to end face of upper breaker (rear-connected type or plug-in type).

B1. Distance from end face of breaker to top plate.

B2. Distance from end face of breaker to insulation plate.

C. Gap between breakers.

D. Distance from side of breaker to side panel (earthed metal).

E. Dimensions of insulation over exposed conductors.

INSULATION DISTANCE IN mm (AT 440V AC MAXIMUM)

Model	Type	A	B1	B2	C	D	E
S50	NF	50	50	50	0	25	*(1)
E100	NF	50	50	50	0	25	*(1)

1. Insulate the exposed conductor until it overlaps the moulded case at the terminal, or the terminal cover.

STANDARD INSTALLATION ENVIRONMENT AND SPECIAL TREATMENTS

TemBreak 2 Mini MCCBs are intended for installation in the following conditions as standard:

- Operating ambient temperature -5 degrees C to 40 degrees C.
- Relative humidity of up to 85%.
- Altitude up to 2000m.
- Atmospheres free from dust, smoke, corrosive gases, inflammable gases, moisture and salt.

For installation in conditions more onerous than those described above, contact Terasaki for details.

The following special treatments have been developed for installation in specific environmental conditions:

- Low temperature treatment. For installation at temperatures down to -40 degrees C for storage and -20 degrees C for operation. The environment must be free from rapid changes in temperature that result in the formation of condensation.

- Fungus-moisture proofing. For installation at temperatures up to 60 degrees C and relative humidity of up to 95%. The environment must be free from rapid changes in temperature.

- Anti-corrosion treatment. MCCB is surface treated to increase resistance to corrosion. If the MCCB is to be installed in atmosphere that contains excessive volumes of corrosive gases or moisture, it should be house in an airtight enclosure.

MINI MOULDED CASE CIRCUIT BREAKERS

You can save space and money with Terasaki's new compact and economical Mini Moulded Case Circuit Breakers.

The range of products includes:

- Moulded Case Circuit Breakers (MCCBs)
- Switch Disconnectors in the same compact moulded case frame sizes as MCCBs
- A comprehensive range of accessories.

The TemBreak range of products includes:

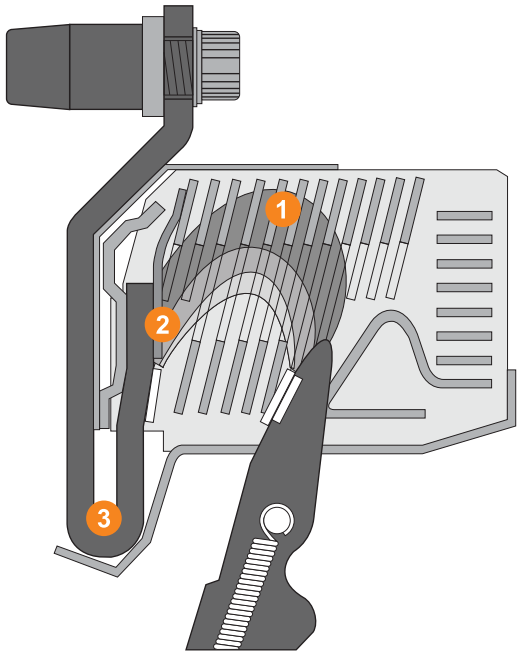
-Moulded Case Circuit Breakers
-Switch-Disconnectors
-A comprehensive range of accessories.

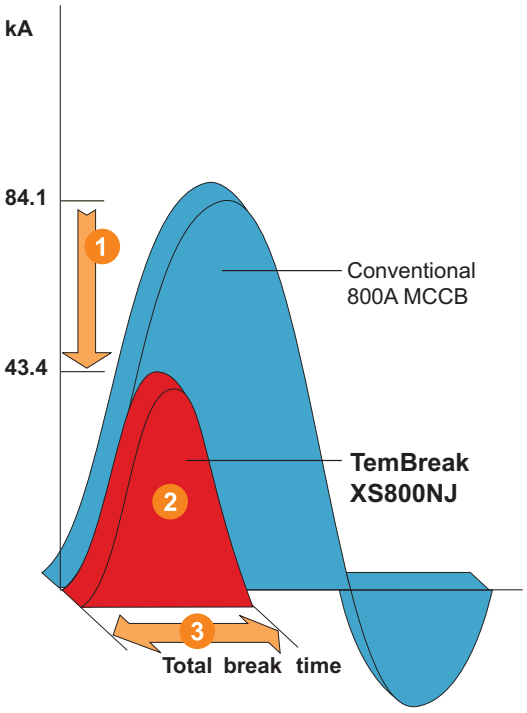
EXCEPTIONAL CURRENT LIMITING

Terasaki's ingenuity in current breaking is exemplified by the Fast Break Mechanism (FBM) of the TemBreak range.

The quick breaking performance of TemBreak provides exceptional current limiting characteristics.

F.B.M - Fast Break Mechanism → Provides → **Exceptional Current Limitation**





1. Quick-break arc chutes
2. Dual repulsive contacts
3. U-shaped conductors

Provides

1. Reduced Peak let through minimises electrodynamic stress on conductors
2. Reduced i^2t energy let through minimises thermal stress on conductors
3. Reduced tripping time minimises damage after fault to both system and MCCB

CT rated current (A) (In)	630, 800, 1000, 1250, 1600
Base current setting (A): (Io)	(In) x (0.63-0.8-1.0)
Long time-delay pick-up current (A): (I_1)	(Io) x (0.8-0.85-0.9-0.95-1.0) Non-tripping at (I_1) setting x 105% and below. Tripping at 125% & above.
Long time-delay time settings (S) (T_1)	(5–10–15–20–30) at (I_1) x 600% current. Setting tolerance ± 20%
Short time-delay pick-up current (A): (I_2)	(Io) x (2-4-6-8-10) Setting tolerance ± 15%
Short time-delay time settings (S) (T_2)	Opening time (0.1, 0.15, 0.2, 0.25, 0.3) in the definite time-delay. Total clearing time is + 50 mS and resettable time -20mS for the time-delay setting.
Instantaneous trip pick-up current (A) (I_3)	Continuously adjustable from (Io) x (3 to 12) Setting tolerance ± 20%
* Pre-trip alarm pick-up current (A) (I_P)	(I_1) x (0.7, 0.8, 0.9, 1.0) Setting tolerance ±10%
* Pre-trip alarm time setting (S) (T_P)	40 fixed definite time-delay.Setting tolerance ±10%
* Ground fault trip pick-up current (A): (I_G)	Continiuously adjustable from (In) x (0.1 to 0.4) Setting tolerance ± 15%
* Ground fault trip time setting (S): (T_G)	Opening time (0.1-0.2-0.3-0.4-0.8) in the definite time-delay. Total clearing time is + 50mS and resettable time is - 20mS for the time-delay settings

Note: * Optional
Note: The underlined values will be applied as standard ratings unless otherwise specified when ordering.

ELECTRICAL CONTROL USING INTERNALLY MOUNTED ACCESSORIES

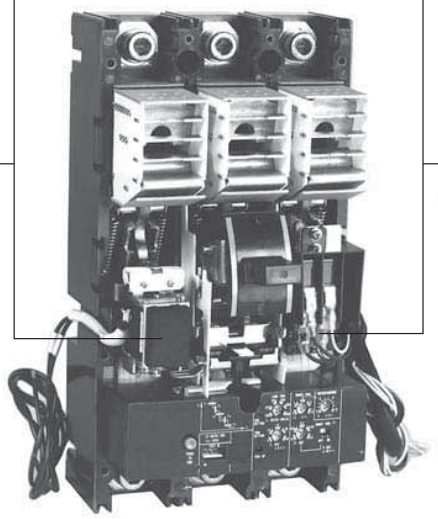
Shunt Trip (SHT)

Remote tripping of the breaker

Undervoltage Trip (UVT)

Automatically trips the breaker when the circuit voltage falls below pre-set value. Remote tripping of the breaker is also possible.
Note: The UVT controller is installed externally, when provided with AC UVT. (Refer to Dimensions)

Note: The SHT and UVT cannot be mounted in the same breaker.



Auxiliary Switch (AX)

Electrically indicates On/Off status of the breaker.

Alarm Switch (AL)

Electrically indicates when the breaker is in the "Tripped" state.

Switch type	Breaker 'ON'	Breaker 'OFF'	Breaker 'TRIP'
AL	ALb1 ALa1 / ALc1	ALb1 ALa1 / ALc1	ALb1 ALa1 / ALc1

Ratings of Shunt Trips

Rate voltage:	Exciting coil current [peak value (A)] Values at the highest voltage (60Hz for AC use)					
	110-115VAC	200-480VAC	24VDC	48VDC	100-115VDC	200-230VDC
	1.1	0.93	2.52	1.55	0.67	0.35

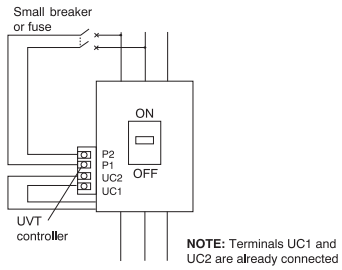
Note: AC rated, permissible operating voltage range is 85 to 110%. DC 75 to 125%.
Note: Special voltages available on request. Contact Terasaki for details.

Ratings of Undervoltage Trips

Rated voltage:	Power supply, VA (with UVT controller			Exciting coil current (mA)	
	100-120VAC	200-240VAC	300-450VAC	24VDC	100-115VDC
	5VA	5VA	5VA	22.7	6.0

Note: Tripping voltage is 35-70% of the rated voltage. Resettable voltage is 85% or less, of the rated voltage.
Note: Special voltages available on request. Contact Terasaki for details

If the UVT is for AC use, an external controller will be installed. The controller is fitted to the left side of the breaker as standard. The controller may be installed separately if required (please specify location). Separate installation is necessary when mechanical interlocks are fitted. UVT controllers incorporating time delay units are also available (contact us for details). Refer to dimensions of terminal blocks for the mounting positions of UVT controllers.

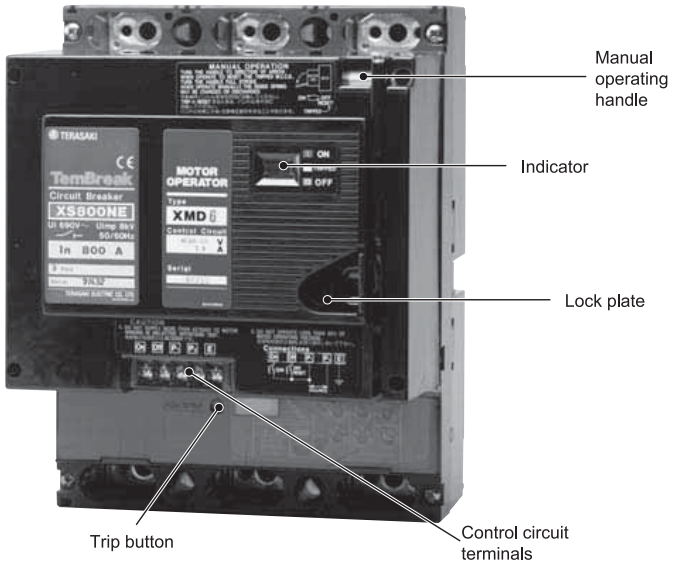


Connection of UVT Controller

Termination of Control Wiring

Leads for internally mounted accessories can be connected to the terminal block. Each terminal block has six terminals. Terminal arrangements are standardised. Refer to dimensions for standard terminal arrangements.

ELECTRICAL CONTROL USING MOTORISED OPERATION



Type XMD6, XMD9

Positive contact indication

Colour coding indicates the true position of the contacts clearly: ON (red), OFF (green), TRIP (white).

Easy maintenance

Breaker mounting, removal, and even setting changes can be done without removing the motor operator.

Manual ON/OFF operation with one stroke

Fast closing operation

Closing in 60ms or less. The closing time remains constant over repeated operations.

② : Maximum values at AC230V, 50Hz
③ : Maximum values at DC110V
④ : Maximum values at the rated operating voltages

ELECTRICAL CONTROL USING MOTORISED OPERATION

Motorised operation

ON CONTROL
When the ON switch is closed, the latch release coil (LRC) is excited and the closing spring is released. The breaker quickly closes and goes into ON status. When the closing spring is released, the limit switch (LS) is opened and the LRC is de-excited.

OFF CONTROL
When the off switch is closed, self-hold control relay (Y) is activated and motor (M) operates to charge the closing spring. The breaker changes to OFF status.

RESET CONTROL
When the breaker is in TRIP status, closing the OFF switch activates self-hold control relay (Y) and starts motor (M). Motor (M) charges the closing spring and resets the breaker.

Manual operation

ON, OFF (RESET)
The breaker can be opened (OFF or RESET) and closed (ON) alternately by pulling the operating lever down in one full stroke. ON/OFF operation of the breaker is possible without charging or releasing the closing spring.

Emergency Trip
Opening the breaker (OFF) using the motor operator takes up to 3 seconds. If a remote emergency OFF function is necessary, incorporate the shunt trip device (SHT) or the undervoltage trip device (UVT) into the breaker.

PRECAUTIONS REGARDING USAGE

- If using the UVT option, be sure to reset the UVT before closing the breaker.
- The motor operator must be supplied with voltage within the following range:
  DC: 75-110% of rated voltage
  AC: 85-110% of rated voltage
  Operation at low voltage may burn out the motor.

Anti-pumping function

When the breaker is turned ON and the closing spring is released, self-hold control relay X is activate. Xa-contact is held closed, and Xb-contact is opened. While the ON switch is closed, latch release coil (LRC) will not be excited even if the OFF switch is closed or an automatic reset circuit is being used. Pumping is thus prevented.

Automatic charge/discharge function

If the breaker is closed manually (ON) while the power source is on, the handle switch (HS) induces automatic release of the closing spring. Likewise, if the breaker is opened manually (OFF), the springs are automatically charged. If the breaker is opened or closed while the power source is off, later when the power source is turned on, the closing spring will automatically be charged or discharged to match the ON/OFF status of the breaker. This automatic charge/discharge function is necessary to prepare the closing mechanism for the next ON/OFF operation. The sound of the charging or discharging of the spring should not be mistaken for a malfunction.

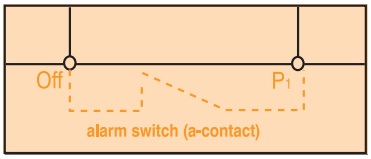
Automatic reset

An alarm switch (a-contact) fitted in the breaker, can be used to induce recharging of the closing spring and automatically reset the MCCB. Connect the automatic reset circuit as shown below.

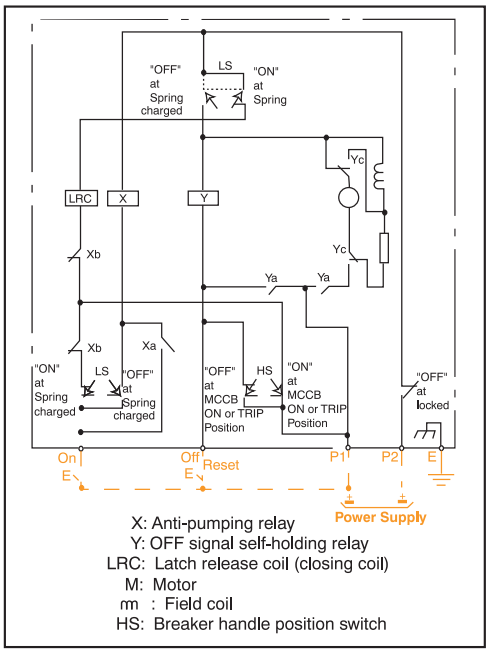
If the alarm switch is used, a pulse signal will be produced in the automatic reset circuit when the alarm is activated. Be sure to use a self-hold circuit to avoid possible problems caused by this pulse signal.

It is recommended that a time delay of approximately 3 minutes is introduced to the automatic reset circuit for thermal magnetic MCCB's. In the event of an overload trip this will prevent the motor operator repeatedly driving the MCCB between the tripped and reset positions while the thermal element is hot.

If an alarm signal is also required for external control, use a 2 alarm switch combination.



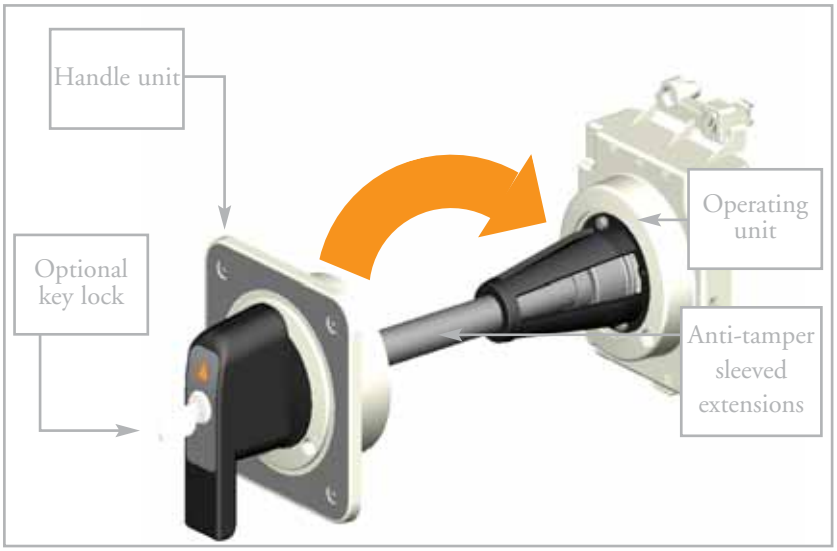
Control circuit AC and DC



Note: Customer wiring shown in orange

OPERATING HANDLES

Door Mounted Handle



Door Mounted Handle with Optional Keylock

The door mounted operating handle is used to operate a circuit breaker mounted inside a cubicle from outside the door. It consists of an operating mechanism that is mounted on the breaker, an operating handle that is mounted on the door, and a shaft that transmits the turning force from the handle to the operating unit. The shaft can be cut to the required length.

The appearance and operation of this handle match those of the door mounted handle for Tembreak 2 MCCBs (details in Section 5).

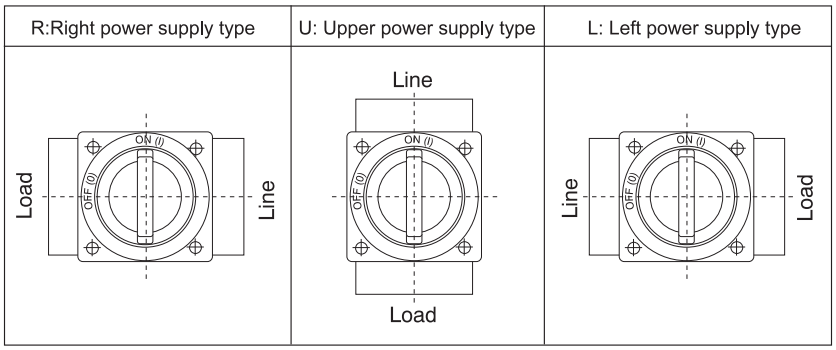
This means that a switchboard containing a combination of TemBreak and TemBreak 2 MCCBs from this catalogue can be operated with handles which all look the same, and work the same way.

OPERATING HANDLES

Breaker Mounted Handle

90° ON/OFF OPERATION.

The handle operation and ON/OFF indicator are the same irrespective of the breaker mounting direction, being vertical or horizontal. This also applies to the panel cut-out.



Double insulation structure

Provides an even higher degree of safety.

Panel lock mechanism

The panel door cannot be opened when the handle is in the ON or OFF position. The panel door can only be opened in the RESET position.

•Equipped with a lock (reverse interlock) mechanism which does not permit the breaker to be closed while the panel door is opened. The lock can be released.

•When the panel lock release is turned counterclockwise the panel door can be opened even when the handle is in the ON or OFF position.

Handle Lock Mechanism

The handle can be locked in the ON or OFF position. Upto 3 padlocks can be fitted (padlock not supplied).

Ordering code

Please specify the correct type code when ordering

TFJXX – U

Mounting Direction	
U	Upper power supply
L	Left hand power supply
R	Right hand power supply

Additional Options

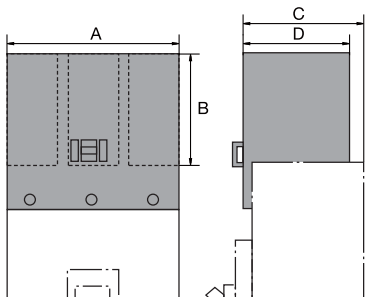
Please specify at the time of ordering

	Standard	Option
Colour	Black	Yellow base Red handle
IP	3X	55

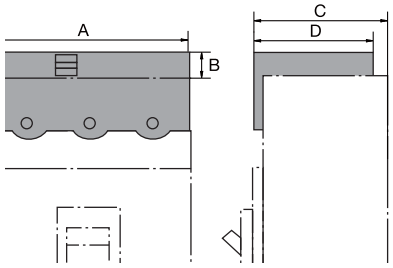
INSULATION ACCESSORIES

Terminal Covers

Terminal covers prevent exposure of terminals and other live parts.



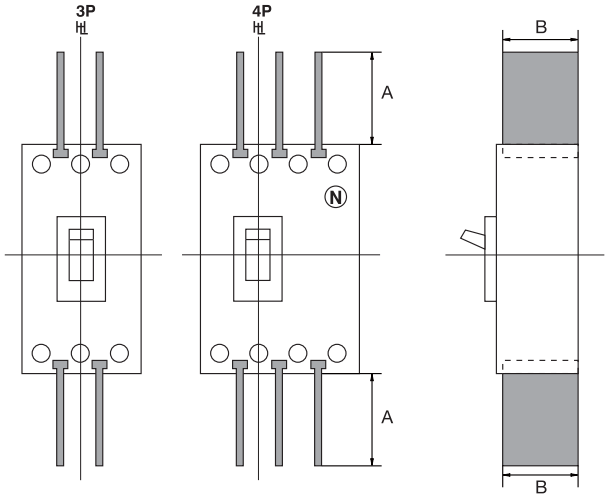
Terminal Covers for Front Connection.

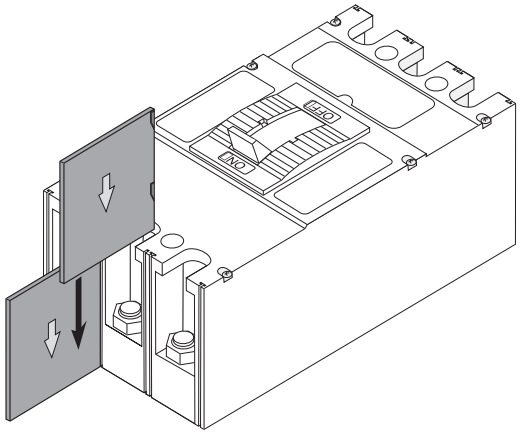


Terminal Covers for Rear Connection and Plug-in.

Interpole Barriers

Interpole barriers provide maximum insulation between phases at the terminals of the MCCB. They can not be fitted at the same time as any of the terminal covers. Interpole barriers can easily be fitted to either end of an MCCB.



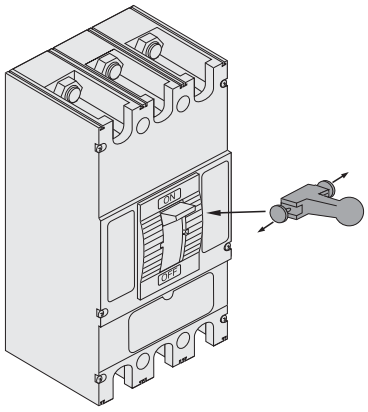


Interpole Barriers

TOGGLE ACCESSORIES

Toggle Extension

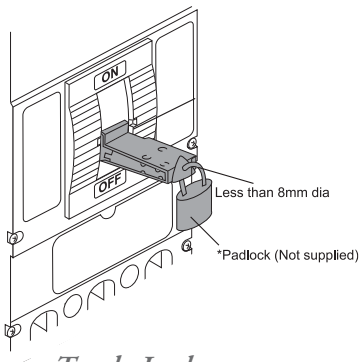
The toggle extension provides extra leverage for the operator when performing manual ON, OFF and RESET operations.



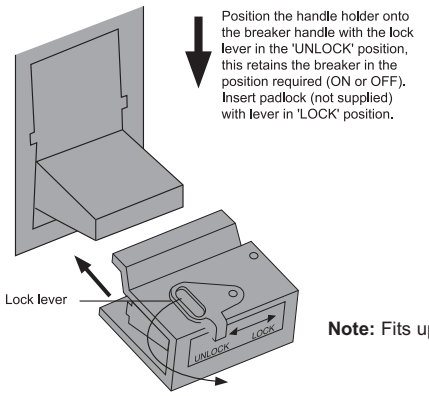
Toggle Extension

Toggle Lock

The toggle lock enables padlocking of the MCCB in either the ON or OFF position. Padlocks are not supplied.



Toggle Lock



Note: Fits up to three padlocks

Key Lock

MCCBs , including those fitted with door mounted handles and some motor operators can be supplied with Castell locking systems. Contact us for details.

Door Flange

A door flange provides a neat finish for the toggle cutout on the outside of the panel door.

MECHANICAL INTERLOCKS

Rear Interlock

Rear interlocks consist of a mechanism mounted at the back of each MCCB of an adjacently mounted pair. The interlock inhibits the closure of one MCCB if the other is already in the ON position. MCCBs cannot be mounted directly to a flat plate, but are installed on a frame to ensure space for the interlock mechanism.

Two MCCBs or switch-disconnectors of the same frame size may be rear interlocked.

An operating handle or motor operator can be fitted to an MCCB with rear interlock.

Wire Interlock

Wire interlocks consist of two mechanisms connected by a cable. The mechanisms are mounted on the back of two MCCBs located at a distance from each other which is limited by the length and bend radius of the cable. The mechanisms inhibit the closure of one MCCB if the other is already in the ON position. MCCBs cannot be mounted directly to a flat plate, but are installed on a frame to ensure space for the interlock mechanism.

Any two of the TemBreak MCCBs or switch disconnectors featured in this catalogue may be wire interlocked.

An operating handle or motor operator can be fitted to an MCCB with rear interlock.

TemTransfer Automatic Changeover Controller

TemBreak MCCBs can be configured to provide automatic supply changeover. They are compatible with the TemTransfer changeover controller. Refer to section 5 for details.

Slide Interlock

Slide interlocks are manually operated toggle locking devices which can be installed between two adjacent MCCBs. Depending on the position of the interlock, one or other of the MCCBs is inhibited from being in the ON position.

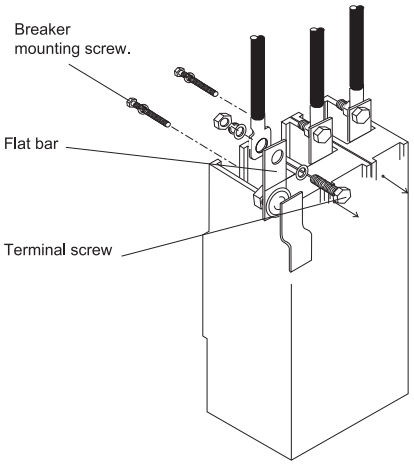
Two MCCBs or switch-disconnectors of the same frame size may be slide interlocked.

Operating handles and motor operators cannot be fitted to MCCBs with slide interlocks.

INSTALLATION

Connection of Large Conductors and Multiple Conductors

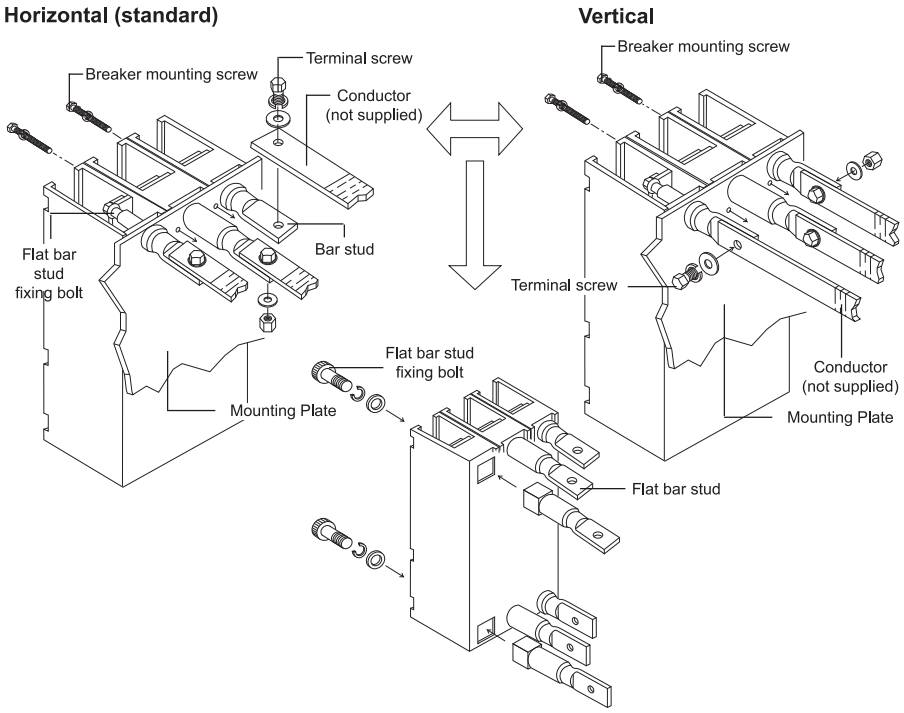
Flat bars are terminal extensions which can be fitted to line or load side terminals and are used to connect large conductors and multiple conductors.



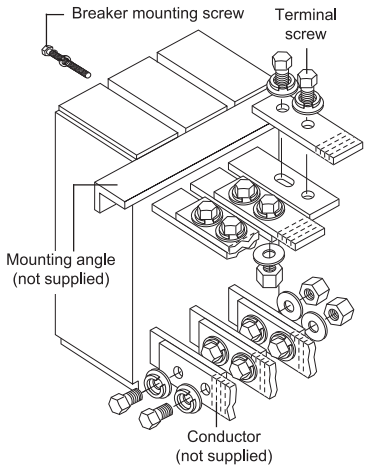
INSTALLATION

Termination in a Separate Compartment

Rear connections allow termination of conductors in a different switchboard compartment to the MCCB body. Optional.



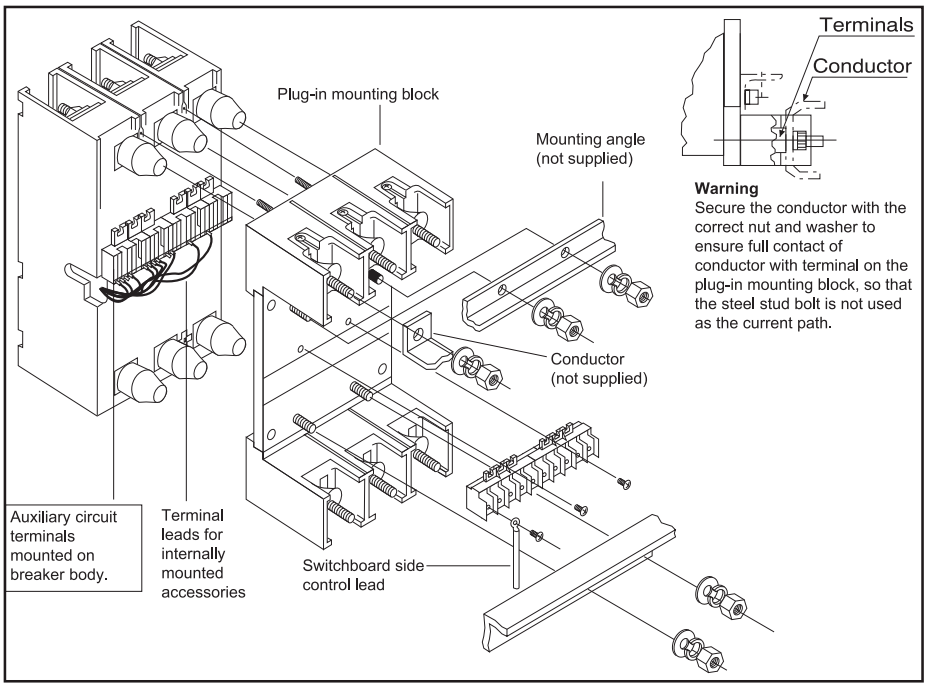
Rear Connections for 800A Frame MCCBs



Rear Connections for 1250A and 1600A frame MCCBs

Plug-in Mounting

The plug-in mounting system allows fast replacement of the MCCB body without the need to disturb the terminations. Solid conductors or cables terminated with compression terminals can be used. Plug-in mounting is available for 800A and 1250A frame MCCBs.



IP20 Protection (Optional)

IP-20 degree of protection and safety trip are available for plug-in type breakers, for switch-board and distribution board use.

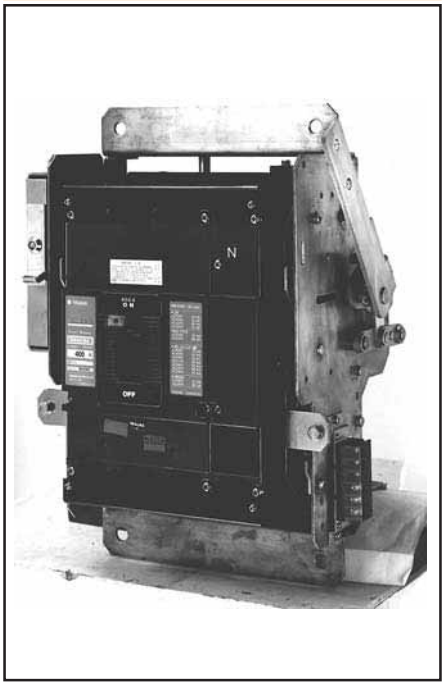
Safety Trip (Optional)

(Trip first, plug-in mechanism)
The breaker will trip automatically, if it is withdrawn while still in the 'ON' position. It is not possible to "plug-in" the breaker when it is in the 'ON' position.

Drawout Mounting

Two types of drawout mounting system are used, depending on the frame size of the MCCB.

Two-position type



800A frame and 1250A frame

- The plug-in type breaker is housed in the draw-out cradle.
- The draw out cradle has two positions “Connected” and “Isolated”.
- The auxiliary circuits are automatically connected or isolated by the auxiliary circuit terminals on the plug-in breaker. Manual connector type is available on request.When a motor operator is fitted, the circuits are manually connected (manual connector type).
- Safety Trip (first trip draw out mechanism). The breaker will trip automatically if it is drawn out while still in the “on” position.
- Position keylock in isolated position (optional) available on request.
- Position switch (1ab) in Connected position (optional) available on request.
- IP-20 degree of protection (Standard)

Three-position type

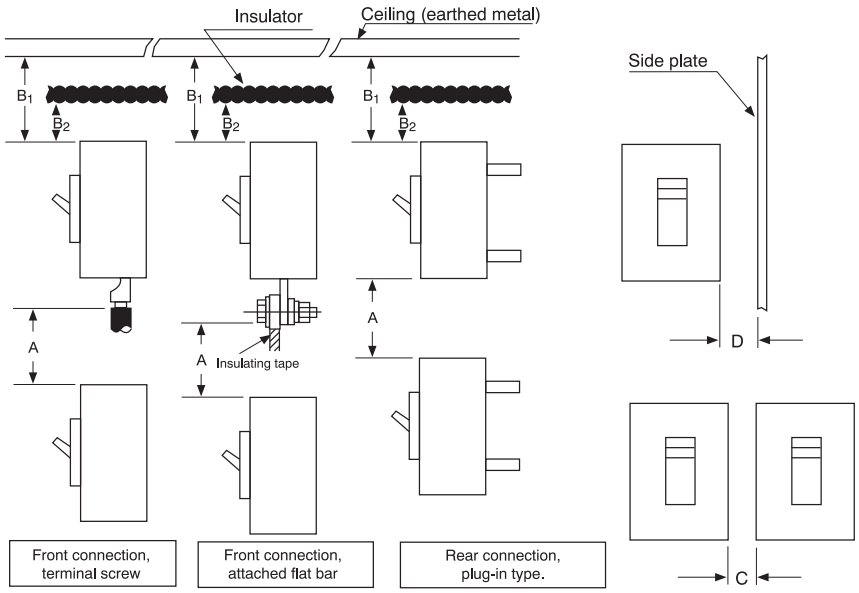
1600A frame

- The draw out cradle has three positions “Connected”, "Test" and “Isolated”.
- The auxiliary circuits are automatically connected and isolated by the disconnect contacts.
  The auxiliary circuits are as follows:
  Connected in “Connected” and “Test” positions and isolated in the “Isolated” position.
- Safety shutters are available (optional) which automatically cover the live parts on the cradle side in the isolated position.
- Safety trip (trip first, draw-out mechanism)
  The breaker will trip automatically if it is drawn out while still in the “ON” position.

Insulation Distances

Attention

Exposed conductors must be insulated up to the breaker terminals. Interpole barriers or optional terminal covers are recommended. If optional terminal covers are used, insulate the exposed conductor until it overlaps the terminal cover.



A : Distance (refer to Table 1) from lower breaker to open charging part of terminal on upper breaker (front connection) or the distance from lower breaker to upper breaker end (rear connection and plug-in type).
B_1 : Distance from breaker end to ceiling (earthed metal)
B_2 : Distance from breaker end to insulator
C : Clearance between breakers
D : Distance from breaker side to side plate (earthed metal)

This table is valid for 380/415V

Table 1

Standard Installation Environments and Special Treatments

Tembreak Ciruit Breakers are designed and built to be used under standard operating conditions. Breakers required for conditions other than standard are available on request. Please specify when ordering.

Standard operating conditions are in accordance with IEC 60947-2
Operating ambient temperature - 5° C to 40° C
When a thermal magnetic breaker is used at a temperature exceeding its calibrated temperature of 40°c, 45°c or 50°c, the operating current should be reduced in accordance with ambient compensation curves, section 3. Please contact Terasaki for temperature performance details of microprocessor protected breakers.
Relative humidity 85% max
Altitude 2,000m max
Note:*Atmosphere should not contain dust, smoke, corrosive gases, inflammable gases, moisture or salt.

Special environment	Specification	Nameplate indication
Low Temperatuer Treatment	This is specially treated for storage and use at low temperature. The lowest limit is -40° C for storage and -20° C for use. The breaker is calibrated at 40° C or, 45° C for marine use and requires an appropriate adjustment of the specified characteristics. At low temperatures the environment must be free from rapid temperature changes that result in condensation forming or freezing of the breaker.	PROOFED FOR LOW TEMPERATURE Storage -40° C or higher Operation -20° C or higher
Fungus-moisture Proofing	The dielectric strength and other electrical properties of insulating materials that are likely to deteriorate at high temperature and high humidity. The tropicalised breaker uses specially selected materials and special surface treatment for such conditions. **Note**: The maximum conditions for use are 60° C ambient and 95% relative humidity provided that there are no rapid changes in temperature likely to occur. Contact Terasaki for details.	FUNGUS MOISTURE PROOFING
Anti-corrosion Treatment	The corrosive resistant breaker is specially surface treated for increased corrosion resistance. **Note**: If the breaker is to be used in an atmosphere that has an excess of corrosive gases or moisture and salt then the breaker must be housed in an air tight box, container or cabinet.	CORROSIVE RESISTING

1. Dimension A is the maximum dimension without the shaft being cut.
2. The shaft can be cut to the required length. If it is neccessary to cut the shaft so short that it does not protrude beyond the shaft support, the shaft support may be removed.

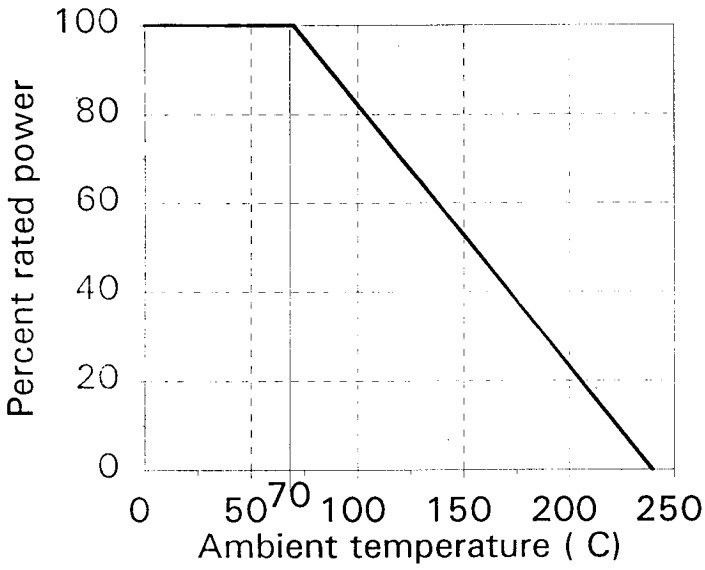
DERATING CURVE
ROX05 - ROX5S



TECHNOLOGY AND SUGGESTED APPLICATIONS

The resistive element comprises a metal oxide film deposited on a ceramic former. The element is protected by a flameproof coating which will withstand overload conditions without flame or mechanical damage. They are recommended for use in applications such as line protection etc..

MOUNTING

The resistors are suitable for processing on automatic insertion equipment and cutting and bending machines.

MARKING

The resistors are marked with a four band colour code in accordance with IEC 62.

ORDERING INFORMATION

Orders for these components should include the following information :-

Type, tolerance and value
e.g. ROX3S 5% 1kO

For preformed components add suffix "BL"
e.g. ROX3S 5% 1kO BL

PERFORMANCE CHARACTERISTICS

The evaluation of the performance characteristics is carried out with reference to IECQ Specifications QC 400 000 and QC 400 100

Long term tests ± (5% + 0.1ohm)		Short term tests ± (1% + 0.05ohm)	
Test ref		Test ref

Safety Instructions

1 Compliance with Instructions in the manual

The Purchaser/User should comply with the instructions and information given in this manual and ensure that all personnel to be associated with the apparatus under this contract are made familiar with the information contained herein.

2 Installation

The **Purchaser**/User should ensure that the apparatus under this contract is correctly installed in a suitable location by technically qualified and competent persons.

Apparatus supplied as loose components, devices or sub assemblies could, when energised, constitute a safety hazard. The Purchaser/User should ensure that such apparatus is installed in a secure location and that adequate information about the installation is provided to all associated with it.

3 Operation and Maintenance

3.1 Guidance Notes for Users on the Safety of Personnel

a) During normal use ensure that plant operators:

- are fully conversant with all controls, particularly those associated with emergency stops.
- comply with safety warning notices and keep all enclosures shut.
- are trained to recognise signs of maloperation and know what action to take in the event of trouble or difficulty.

b) During maintenance, testing etc, ensure that only technically competent and authorised persons are permitted to carry out work and that they:

- comply with statutory requirements.
- are fully conversant with the apparatus and the system of which it is a part, and recognise the safety hazards which could arise.
- isolate the apparatus completely, where possible, before opening enclosures and prove it is dead before starting work. Precautions must be taken to ensure that the isolated apparatus cannot become live whilst any work is being carried out.
- comply with safe working procedures for safety of themselves and others, including the use of temporary barriers and warning notices.
- are conversant with the information provided, particularly on matters relating to safety.
- recognise the hazards which can arise when working on live apparatus and take all necessary precautions.

- functionally check the apparatus and then mechanically and/or electrically test it in accordance with this manual and good working practice before putting the apparatus into service.
- take account of the possibility that the apparatus may have been modified without proper reference to the manufacturer and to take extreme caution at all times before, during and after any work is carried out.

If there is any doubt as to the correct and safe method of working then further assistance should be sought from NCE Switchgear.

FLOOR LEVELLING REQUIREMENTS
DOCUMENT No. C6608N

1) Switchboards require to be mounted on a suitable surface (concrete, metal base etc...).

2) If the surface of this is not level appropriate steps require to be taken to resolve same.

3) At switchboard installation any minor level deviations (which show up on busbar fish plates & section bolt holes not lining up) can be overcome by insertion of metal shim plates underneath joining sections bases.

INSTALLATION INSTRUCTIONS
DOCUMENT No. C6608T

DELIVERY

All switchboards will be split into appropriate shipping lengths & be delivered within enclosed crates.

INSTALLATION

1) Check packing list for switchboard section detail.

2) Dismantle crate.

3) Centralise crane lifting chains above the section lifting eyes & affix suitable lifting shackles onto same.

4) Lower chains/lifting shackles & fix onto lifting eyes (all lifting eyes must be used).

5) Raise crane head & take up tension on chains.

6) Raise section approximately 6 inches & check section is hanging level.

7) If section is level lift section into switchroom position

8) If section is not hanging level lower to ground & after slackening chains re-align same & repeat stages 5, 6 & 7.

SECTION FIXING/RE-ASSEMBLY

1) Fix all sections to base using appropriate fixings.

2) Remove appropriate access covers.

3) Bolt together sections working from further section from entry point. Using fixing screws supplied the fixings run vertically at front and rear of sections.

4) Bolt together Busbar connecting plates & torque same to 17NM.

5) Re-connect ethernet wiring between sections by using NCE wiring diagram. All ethernet cables are run within switchboard cableway & at despatch, coiled at panel splits.
